Mueller,Uwe Cantner,2013-03-09 Joseph Schumpeter oscillated in his view about the type of economic system that was most conducive to growth In his 1911 treatise Schumpeter argued that a more decentralized and turbulent industry structure where the process of creative destruction was triggered by vigorous entrepreneurial activity was the engine of economic growth But by 1942 Schumpeter had modified his theory arguing instead that a more centralized and stable industry structure was more conducive to growth According to Schumpeter 1942 p 132 under the managed economy there was little room for entrepreneurship because Innovation itself is being reduced to routine Technological progress is increasingly becoming the business of teams of trained specialists who turn out what is required to make it work in predictable ways p 132 Schumpeter 1942 reversed his earlier view by arguing that the integration of knowledge creation and appropriation bestowed an inherent innovative advantage upon giant corporations Since capitalist enterprise by its very achievements tends to automatize progress we conclude that it tends to make itself superfluous to break to pieces under the pressure of its own success *Technology Transfer: From Invention to Innovation* A.
