Infant Research And Adult Treatment:

Infant Research and Adult Treatment Beatrice Beebe, Frank M. Lachmann, 2013-04-15 Infant Research and Adult Treatment is the first synoptic rendering of Beatrice Beebe's and Frank Lachmann's impressive body of work. Therapists unfamiliar with current research findings will find here a comprehensive and up to date overview of infant competencies. These competencies give rise to presymbolic representations that are best understood from the standpoint of a systems view of interaction. It is through this conceptual window that the underpinnings of the psychoanalytic situation especially the ways in which both patient and therapist find and use strategies for preserving and transforming self organization in a dialogic context emerge with new clarity. They not only show how their understanding of treatment has evolved but illustrate this process through detailed descriptions of clinical work with long term patients. Throughout they demonstrate how participation in the dyadic interaction reorganizes intrapsychic and relational processes in analyst and patient alike and in ways both consonant with and different from what is observed in adult infant interactions. Of special note is their creative formulation of the principles of ongoing regulation, disruption and repair and heightened affective moments. These principles which describe crucial facets of the basic patterning of self organization and its transformation in early life provide clinical leverage for initiating and sustaining a therapeutic process with difficult to reach patients. This book provides a bridge from the phenomenology of self psychological, relational and intersubjective approaches to a systems theoretical understanding that is consistent with recent developments in psychoanalytic therapy and amenable to further clinical investigation. Both as reference work and teaching tool as research grounded theorizing and clinically relevant synthesis *Infant Research and Adult Treatment* is destined to be a permanent addition to every thoughtful clinician's bookshelf.

The Origins of Attachment Beatrice Beebe, Frank M. Lachmann, 2013-12-04 *The Origins of Attachment* Infant Research and Adult Treatment addresses the origins of attachment in mother infant face to face communication. New patterns of relational disturbance in infancy are described. These aspects of communication are out of conscious awareness. They provide clinicians with new ways of thinking about infancy and about nonverbal communication in adult treatment. Utilizing an extraordinarily detailed microanalysis of videotaped mother infant interactions at 4 months, Beatrice Beebe, Frank Lachmann and their research collaborators provide a more fine grained and precise description of the process of attachment transmission. Second by second microanalysis operates like a social microscope and reveals more than can be grasped with the naked eye. The book explores how alongside linguistic content the bodily aspect of communication is an essential component of the capacity to communicate and understand emotion. The moment to moment self and interactive processes of relatedness documented in infant research form the bedrock of adult face to face communication and provide the background fabric for the verbal narrative in the foreground. *The Origins of Attachment* is illustrated throughout with several case vignettes of adult treatment. Discussions by Carolyn Clement, Malcolm Slavin and E. Joyce Klein, Estelle Shane, Alexandra Harrison and Stephen Seligman show how the

Conservative and Radical Perspectives on Psychoanalytic Knowledge Aner Govrin, 2015-11-06 Psychoanalysis really should not exist today Until a few years ago most of the evidence suggested that its time was drawing to a close and yet psychoanalysis demonstrated remarkable resilience in the face of criticism alongside significant resurgence over the course of the last years In Conservative and Radical Perspectives on Psychoanalytic Knowledge The Fascinated and the Disenchanted psychoanalyst and philosopher Aner Govrin describes the mechanisms of sociology within the psychoanalytic community which have enabled it to withstand the hostility levelled at it and to flourish as an intellectual and pragmatic endeavour He defends the most criticized aspect of psychoanalysis the fascination of analysts with their theories Govrin demonstrates that fascination is a common phenomenon in science and shows its role in the evolution of psychoanalysis Govrin argues that throughout its history psychoanalysis has successfully embraced an amalgam of what he has defined and termed fascinated and troubled communities A fascinated community is a group that embraces a psychoanalytic theory such as Bion s Klein s Winnicott s as one embraces truth A troubled community is one that is not satisfied with the state of psychoanalytic knowledge and seeks to generate a fundamental change that does not square with existing traditions such as new psychoanalytic schools scientifically troubled communities and the relational approach It is this amalgam and the continuous tension between these two groups that are responsible for psychoanalysis rich and varied development and for its ability to adapt to a changing world Clinical vignettes from the work of Robert Stolorow Betty Joseph Antonino Ferro and Michael Eigen illustrate the dynamic by which psychoanalytic knowledge is formed Conservative and Radical Perspectives on Psychoanalytic Knowledge
