Inflammation is a fundamental response of the body to injury and infection involving complex cellular and molecular mechanisms. While acute inflammation plays a crucial role in defending against pathogens and repairing tissues, chronic inflammation is closely associated with the occurrence and development of various diseases, including cancer, cardiovascular diseases, neurodegenerative diseases, and autoimmune disorders. The recent advancements in single cell sequencing technologies have offered an unprecedented perspective on the cellular and molecular heterogeneity of inflammatory responses. Through high resolution single cell RNA sequencing, it is possible to uncover the specific gene expression profiles of different types of immune cells during inflammation, thereby providing an in depth understanding of their functions. Single cell sequencing also enables the monitoring of dynamic changes in cellular gene expression at different time points, tracking the key molecular expression patterns during the inflammatory process. Additionally, in combination with spatial transcriptomics techniques, single cell sequencing can analyze the spatial distribution of cells in tissues and their gene expression, mapping out detailed cellular maps of inflammatory sites and identifying the cellular characteristics and interaction networks in different regions. The latest technological developments also include the integrated analysis of multi omics data, such as single cell ATAC seq, DNA sequencing, and proteomics, providing more comprehensive cellular functional information and revealing the complex mechanisms of gene expression regulation. Simultaneously, the application of novel computational tools and algorithms enables researchers to extract meaningful biological information from complex data and uncover the key pathways and molecular mechanisms in inflammatory responses. Therefore, this Research Topic aims to showcase the latest progress of single cell sequencing technologies in inflammation research. We invite researchers interested in this topic to submit original research, brief research reports, and review articles, mainly but not limited to the following sub themes: 1. New applications of single cell RNA sequencing in the study of inflammatory processes; 2. Single cell epigenomics and transcriptomics in inflammatory diseases; 3. Identification of key inflammatory mediators, signaling pathways, and immune cell heterogeneity at the single cell level; 4. Interactions between immune and non immune cells in the inflammatory microenvironment; 5. Identification of novel therapeutic targets and the development of personalized medical approaches for inflammatory diseases based on single cell analysis; 6. Single cell analysis of drug responses and resistance mechanisms in inflammation; 7. Innovations in single cell sequencing technologies related to inflammation research. Please note that manuscripts consisting solely of bioinformatics or computational analysis of public genomic or transcriptomic databases, which are not accompanied by robust and relevant validation, clinical cohort, or biological validation in vitro or in vivo, are out of scope for this Research Topic.

**Inflammation: Mechanisms and Therapeutics** Niall S. Doherty, Barry M. Weichmann, Douglas W. Morgan, Lisa A. Marshall, 1995-03-27

The Seventh International Conference of the Inflammation Research Association entitled Inflammation Mechanisms and

Therapeutics was held on September 25-29, 1994 in White Haven, Pennsylvania. The major focus of this series of conferences is the multidisciplinary investigation of inflammation and the discovery of novel therapeutic approaches to inflammatory diseases. It was therefore particularly gratifying that the list of attendees included scientists of diverse backgrounds: preclinical biology, synthetic and theoretical chemistry, biotechnology, and clinical research. The Conference was characterized by a very high degree of participation in the scientific debate by attendees; a large proportion of whom presented at poster sessions, poster discussions, and workshops; and by the many opportunities for informal discussion provided by the organizers. This volume captures much of the excitement and enthusiasm of the Conference and should be a valuable resource for scientists in the field.

Niall S. Doherty, Barry M. Weichman, Douglas W. Morgan, Lisa A. Marshall.

**IX. Acknowledgments**

The manuscripts contained in this volume are based on material presented at the Seventh International Conference of the Inflammation Research Association held in White Haven, Pennsylvania, on September 25-29, 1994. We would like to thank the speakers and session chairpersons for their contributions to the Conference and these Proceedings. The following individuals played indispensable roles in the organization and running of the Conference and are responsible for making it such a success.

**Neuroinflammation, Neurodegeneration and Metabolic Disease: From Molecular Mechanisms to Therapeutic Innovation** Fawaz Alzaid, Mohammed Al-Onaizi, Ayman ElAli, 2024-09-05

Neuroinflammation manifests as changes to cognition or behavior or as altered function in peripheral tissues. Patients with metabolic diseases, e.g., diabetes, obesity, are more likely to suffer with neuroinflammation since the disrupted metabolism and chronic low-grade inflammation that accompany metabolic diseases extends to the nervous system. Neuroinflammation will then lead to functional impairment and progressive loss of neuronal structure, with neurodegeneration being the end result. Factors like chronic hyperglycemia, dyslipidemia, and insulin resistance are candidate drivers of neuroinflammation and neurodegeneration. The effects on the nervous system also contribute to worsening insulin resistance and a further loss of metabolic function and homeostasis in innervated peripheral tissues, e.g., liver, adipose tissue. Persistent metabolic stress predisposes patients to peripheral neuropathies, cognitive dysfunction, and development of neurodegenerative diseases, e.g., Alzheimer's disease. Multiple associations link metabolic disease to neuropathology. Targeting neuroinflammation to preserve neuronal integrity holds promise for managing metabolic diseases and associated neurological complications. Research on Neuroinflammation, Neurodegeneration, and Metabolic Disease: From Molecular Mechanisms to Therapeutic Innovation is necessary to address several critical gaps in our understanding and treatment of metabolic diseases and of neuropathology. Firstly, while the role of systemic inflammation in

metabolic diseases has been extensively studied the specific impact of nervous system inflammation neuroinflammation and resulting neurodegeneration on these conditions is still an emerging field Investigating the mechanisms by which neuroinflammation and neurodegeneration contribute to metabolic diseases can provide valuable insights into the pathogenesis and progression of these conditions *Neuroinflammation and its Resolution: From Molecular Mechanisms to Therapeutic Perspectives* Morena Zusso,Stefano Moro,Pietro Giusti,Leanne Stokes,2020-07-14 [The Network of Inflammatory Mechanisms in Kidney Disease: Mechanism and New Therapeutic Agents](#) Yuji Nozaki,Poh-Yi Gan,Joshua Daniel Ooi,2022-01-28 **Immunity and Inflammatory Responses in Kidney Disease: from Mechanisms to Novel Therapeutic Strategies** Wei Jing Liu,Xu-jie Zhou,Qingguo Liu,2024-08-30 Kidney disease is a leading cause of death worldwide and is increasingly recognized as a global health problem The kidneys are a frequent target of systemic immune and autoimmune disorders including systemic autoimmunity and vasculitis immune complex related serum sickness and complement disorders The complex regulation between the immune system and inflammation plays a key role in the progression of kidney disease especially in immune related nephropathy Cytokines released by monocytes macrophages including IL 17 INF TNF and IL 6 exacerbate renal dysfunction and injury M1 pro inflammatory cells help to clear infections but can also promote renal injury and lead to renal fibrosis Loss of immune homeostasis can exacerbate the adverse effects of inflammation on the kidney and lead to loss of renal function Therefore further understanding of immune dysregulation and inflammatory responses has the potential to develop innovative paradigm shifting strategies for the treatment of kidney disease The development of novel computational tools and genomic data analysis are accelerating our understanding of the crosstalk of immunity and inflammation in kidney disease The aim of this Research Topic is to provide a forum to explore potential and effective therapeutic targets by focusing on the role of regulatory mechanisms of immunity and inflammation in renal disease We aim to elucidate the possible biological mechanisms of immunity and inflammation in the pathogenesis of kidney disease We welcome submissions of Original Research and Review articles including but not limited to the following 1 The role of immune regulation of inflammation in immune related nephropathy 2 Mechanisms of immune and inflammatory interactions in hypertensive nephropathy 3 Emerging novel cytokines and immune markers in the diagnosis and prognosis of membranous nephropathy 4 Pathogenetic mechanism of inflammation in chronic kidney disease 5 Influence of chemokines and chemokine receptors on inflammation in kidney disease **Anti-inflammatory immunopharmacology in the prevention and treatment of major chronic diseases** Shihai Yan,Dongdong Sun,Qiuwang Zhang,Zhirong Geng,Peixiang Zhang,2023-02-14 *Role of Nrf2 in Disease: Novel Molecular Mechanisms and Therapeutic Approaches* Javier Egea,Carmen Gomez-Guerrero,Águeda González Rodríguez,Juan Antonio Moreno,2020-01-02 **Natural Products and Their Derivatives in the Treatment of Inflammatory and Autoimmune Diseases** Jiao Xiao,Jian Chen,Mohamed El-Shazly,2025-05-28 Inflammatory and autoimmune diseases are diseases of serious threat to human health and life Over

the past few decades great effort has been made to understand the molecular mechanisms of inflammatory and autoimmune diseases which has led to the development of drug discovery Natural products especially monomer compounds possess structural diversity and significant biological activity which are important sources of drugs and lead compounds playing an important role in innovative drug development In the past few years scientists have made many exciting achievements in chemistry pharmaceutical resources pharmacology preparations new drug development and other related fields One of the successful examples is Prof Tu You You who won the 2015 Nobel Prize in Physiology or Medicine for her research on a natural compound artemisinin A plethora of studies have demonstrated that artemisinin and its analogs exhibited anti parasitic anti tumor and anti inflammatory activities and showed potent effects in the treatment of immune diseases Therefore natural products have great development prospects in the field of inflammatory and autoimmune diseases Research focusing on the functional implications of natural products and their derivatives for the treatment of inflammatory and autoimmune diseases will promote the discovery of new drugs with independent intellectual property rights
