Inflected Language Cb:

Development of Verb Inflection in First Language Acquisition Dagmar Bittner, Wolfgang U. Dressler, Marianne Kilani-Schoch, 2011-06-24 The volume deals with the emergence of verb morphology in children during their second and early third year of life from a cross linguistic perspective It covers 15 contributions each analyzing one single language based on parallel longitudinal investigations of children with parallel methodology and macrostructure in representation The main question addressed is How do children detect morphology and construct first subsystems of verbal inflection The focus lies on the transition from a premorphological phase to a protomorphological phase The main proposal consists in the concept of miniparadigms and of their relation to morpho syntactic developments in early first language acquisition Children's Language K. E. Nelson, 2014-03-18 First published in 1983 This series Children's Language reflects the conviction that extensive work on entirely new fronts along with a great deal of reinterpretation of old front data will be necessary before any persuasive and truly orderly account of language For all volumes in the series there is a common scheme of operation with two tactics First to give authors sufficient planning time and freedom to arrive at a chapter length account of their area of thinking which vividly shows both the progress and the problems in that area with the author of each chapter free to find a workable proportion of new experimental contributions review and theory The second tactic concerns the selection of topics for each volume This is Volume 4 Structures about language and thought and children as employed in certain other fields may well be shaken and stimulated particularly in education sociology anthropology literature and language remediation

The Child's Conception of Language A. Sinclair, R. J. Jarvella, W. J. M. Levelt, 2013-03-12 It is obvious that the growing child manifests an increasing understanding of his language and facility to use it A major part of the child language literature is concerned with the child's developing linguistic and communicative competence Scattered evidence also shows however that children become progressively more aware of language as language It is interesting to consider in what ways the internal structure and mechanisms of language become more accessible Little is known about linguistic awareness of this kind the role it plays or how it develops When the new Projektgruppe fUr Psycholinguistik of the Max Planck Gesellschaft was founded the child's conception of language in analogy to Piaget's child's conception of the physical world became one of the research unit's topics of study As previous work on linguistic awareness was largely amorphous we first organized a kind of conference workshop with some of those who had worked in the area The aims of this meeting were to map out the field of study detail the phenomena of interest and define major theoretical issues The meeting took place just after the creation of the project group on May 3-7 1977 The participants were psychologists and linguists who had either published work on metalinguistic issues in child language or who could be expected to contribute substantially to the discussion This book is a direct outcome of that conference though it is not a complete reflection of the papers presented or of the discussion that took place
