   Influence Diagrams, Belief Nets and Decision Analysis Robert M. Oliver,James Q. Smith,1990 Based on the proceedings of a conference on Influence Diagrams for Decision Analysis Inference and Prediction held at the University of California at Berkeley in May of 1988 this is the first book devoted to the subject The editors have brought together recent results from researchers actively investigating influence diagrams and also from practitioners who have used influence diagrams in developing models for problem solving in a wide range of fields   *Influence Diagrams, Belief Nets, and Decision Analysis (1988, University of California, Berkeley)* Robert M. Oliver,J. Q. Smith,1989   Decision Theory and Decision Analysis: Trends and Challenges Sixto Ríos,2012-12-06 Decision Theory and Decision Analysis Trends and Challenges is divided into three parts The first part overviews provides state of the art surveys of various aspects of decision analysis and utility theory The second part theory and foundations includes theoretical contributions on decision making under uncertainty partial beliefs and preferences The third section applications reflects the real possibilities of recent theoretical developments such as non expected utility theories multicriteria decision techniques and how these improve our understanding of other areas including artificial intelligence economics and environmental studies   Handbook of Decision Analysis Gregory S. Smith,2010-09-23 Bayesian decision analysis supports principled decision making in complex domains This textbook takes the reader from a formal analysis of simple decision problems to a careful analysis of the sometimes very complex and data rich structures confronted by practitioners The book contains basic material on subjective probability theory and multi attribute utility theory event and decision trees Bayesian networks influence diagrams and causal Bayesian networks The author demonstrates when and how the theory can be successfully applied to a given decision problem how data can be sampled and expert judgements elicited to support this analysis and when and how an effective Bayesian decision analysis can be implemented Evolving from a third year undergraduate course taught by the author over many years all of the material in this book will be accessible to a student who has completed introductory courses in probability and mathematical statistics   **Rational Choice and Judgment** Rex Brown,2005-05-06 The tools needed to make a better more informed decision Decision analysis DA is the logic of making a decision using quantitative models of the decider s factual and value judgments DA is already widely used in business government medicine economics law and science However most resources present only the logic and models rather than demonstrating how these methods can be effectively applied to the real world This book offers an innovative approach to decision analysis by focusing on decision making tools that can be utilized immediately to make better more informed decisions It uses no mathematics beyond arithmetic Examining how deciders think about their choices this book provides problem solving techniques that not only reflect sound modeling but also meet other essential requirements they build on the thinking and knowledge that deciders already possess they provide knowledge in a form that people are able and willing to provide they produce results that the decider can use and they are based on intimate and continuous interactions with the decider The methods outlined in this text take into account such factors as the use the user the organization available data and subjective knowledge Replete with exercises case studies and observations from the author s own

extensive consulting experience the book quickly engages readers and enables them to master decision analysis by doing rather than by simply reading Using familiar situations it demonstrates how to handle knowledge as it unfolds in the real world A term project is presented in the final chapter in which readers can select an actual decision making problem and apply their newfound tools to prepare a recommendation A sample report is provided in the appendix Beginning with qualitative structuring the text advances to sophisticated quantitative skills that can be applied in both public and private enterprise including Modeling decision making under conditions of uncertainty or multiple objectives Risk analysis and assessment Communicating and justifying controversial decisions Personal life choices and political judgments Adapting decision aid to organizations The book s broad applicability makes it an excellent resource for any organization or as a textbook for decision making courses in a variety of fields including public policy business management systems engineering and general education An Instructor s Manual presenting detailed solutions to all the problems in the book is available from the Wiley editorial department *OPTIMIZATION AND OPERATIONS RESEARCH – Volume IV* Ulrich Derigs ,2009-04-15 Optimization and Operations Research is a component of Encyclopedia of Mathematical Sciences in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias The Theme on Optimization and Operations Research is organized into six different topics which represent the main scientific areas of the theme 1 Fundamentals of Operations Research 2 Advanced Deterministic Operations Research 3 Optimization in Infinite Dimensions 4 Game Theory 5 Stochastic Operations Research 6 Decision Analysis which are then expanded into multiple subtopics each as a chapter These four volumes are aimed at the following five major target audiences University and College students Educators Professional Practitioners Research Personnel and Policy Analysts Managers and Decision Makers and NGOs Green Technologies: Concepts, Methodologies, Tools and Applications Management Association, Information Resources,2011-03-31 Green Technologies Concepts Methodologies Tools and Applications assembles the most up to date collection of research results and recent discoveries in environmental and green technology This comprehensive anthology covers a wide range of topics i **Progress in Evolutionary Computation** Xin Yao,1995-08-10 This volume contains the best carefully revised full papers selected from the presentations accepted for the AI 93 and AI 94 Workshop on Evolutionary Computation held in Australia The 21 papers included cover a wide range of topics in the field of evolutionary computation from constrained function optimization to combinatorial optimization from evolutionary programming to genetic programming from robotic strategy learning to co evolutionary game strategy learning The papers reflect important recent progress in the field more than half of the papers come from overseas **The Practice of Enterprise Modeling** Jolita Ralyté,Sergio España,Óscar Pastor,2015-10-27 This volume constitutes the proceedings of the 8th IFIP WG 8 1 Conference on the Practice of Enterprise Modeling held in November 2015 in Valencia Spain The PoEM conference series started in 2008 and aims to provide a forum sharing knowledge and experiences between the academic community and practitioners from

spanning Bayesian networks undirected Markov networks discrete and continuous models and extensions to deal with dynamical systems and relational data For each class of models the text describes the three fundamental cornerstones representation inference and learning presenting both basic concepts and advanced techniques Finally the book considers the use of the proposed framework for causal reasoning and decision making under uncertainty The main text in each chapter provides the detailed technical development of the key ideas Most chapters also include boxes with additional material skill boxes which describe techniques case study boxes which discuss empirical cases related to the approach described in the text including applications in computer vision robotics natural language understanding and computational biology and concept boxes which present significant concepts drawn from the material in the chapter Instructors and readers can group chapters in various combinations from core topics to more technically advanced material to suit their particular needs   **Supervision and Safety of Complex Systems** Nada Matta,Yves Vandenboomgaerde,Jean Arlat,2012-12-17 This book presents results of projects carried out by both scientific and industry researchers into the techniques to help in maintenance control supervision and security of systems taking into account the technical environmental and human factors This work is supported by the Scientific Group GIS 3SGS It is a collaborative work from 13 partners academic and industrial who have come together to deal with security problems The problems and techniques discussed mainly focus on stochastic and dynamic modeling maintenance forecasting diagnosis reliability performance organizational human and environmental factors uncertainty and experience feedback   *Decision Behaviour, Analysis and Support* Simon French,John Maule,Nadia Papamichail,2009-07-30 A multi disciplinary exploration of how we can help decision makers to deliberate and make better decisions   *Uncertainty in Artificial Intelligence* David Heckerman,Abe Mamdani,2014-05-12 Uncertainty in Artificial Intelligence contains the proceedings of the Ninth Conference on Uncertainty in Artificial Intelligence held at the Catholic University of America in Washington DC on July 9 11 1993 The papers focus on methods of reasoning and decision making under uncertainty as applied to problems in artificial intelligence AI and cover topics ranging from knowledge acquisition and automated model construction to learning planning temporal reasoning and machine vision Comprised of 66 chapters this book begins with a discussion on causality in Bayesian belief networks before turning to a decision theoretic account of conditional ought statements that rectifies glaring deficiencies in classical deontic logic and forms a sound basis for qualitative decision theory Subsequent chapters explore trade offs in constructing and evaluating temporal influence diagrams normative engineering risk management systems additive belief network models and sensitivity analysis for probability assessments in Bayesian networks Automated model construction and learning as well as algorithms for inference and decision making are also considered This monograph will be of interest to both students and practitioners in the fields of AI and computer science   *Probabilistic Reasoning in Intelligent Systems* Judea Pearl,2014-06-28 Probabilistic Reasoning in Intelligent Systems is a complete and accessible account of the theoretical foundations and computational methods that

underlie plausible reasoning under uncertainty The author provides a coherent explication of probability as a language for reasoning with partial belief and offers a unifying perspective on other AI approaches to uncertainty such as the Dempster Shafer formalism truth maintenance systems and nonmonotonic logic The author distinguishes syntactic and semantic approaches to uncertainty and offers techniques based on belief networks that provide a mechanism for making semantics based systems operational Specifically network propagation techniques serve as a mechanism for combining the theoretical coherence of probability theory with modern demands of reasoning systems technology modular declarative inputs conceptually meaningful inferences and parallel distributed computation Application areas include diagnosis forecasting image interpretation multi sensor fusion decision support systems plan recognition planning speech recognition in short almost every task requiring that conclusions be drawn from uncertain clues and incomplete information Probabilistic Reasoning in Intelligent Systems will be of special interest to scholars and researchers in AI decision theory statistics logic philosophy cognitive psychology and the management sciences Professionals in the areas of knowledge based systems operations research engineering and statistics will find theoretical and computational tools of immediate practical use The book can also be used as an excellent text for graduate level courses in AI operations research or applied probability

Tools for Making Acute Risk Decisions CCPS (Center for Chemical Process Safety),2010-09-14 The complexity of today s risk decisions is well known Beyond cost and risk there are many other factors contributing to these decisions including type of risk such as human injury or fatality the economic impact on the local community profitability availability of capital alternatives for reducing or eliminating the risk costs of implementing alternatives codes standards regulation and good industry practice This book presents a large range of decision aids for risk analysts and decision makers in industry so that vital decisions can be made in a more consistent logical and rigorous manner Though primarily aimed at the process industry this book can be used by anyone who makes similar decisions in other industries including those in management science   **Introduction to Statistical Decision Theory** Silvia Bacci,Bruno Chiandotto,2019-07-11 Introduction to Statistical Decision Theory Utility Theory and Causal Analysis provides the theoretical background to approach decision theory from a statistical perspective It covers both traditional approaches in terms of value theory and expected utility theory and recent developments in terms of causal inference The book is specifically designed to appeal to students and researchers that intend to acquire a knowledge of statistical science based on decision theory Features Covers approaches for making decisions under certainty risk and uncertainty Illustrates expected utility theory and its extensions Describes approaches to elicit the utility function Reviews classical and Bayesian approaches to statistical inference based on decision theory Discusses the role of causal analysis in statistical decision theory
