Influence Operator Two Plays

David Williamson

Influence Operator Two Plays:

Influence ; Operator David Williamson, *Influence* is a scathing and bitingly funny play about the media personalities that dominate our lives and the divisions that can shatter families *Operator* is a play about a young charming go getter Jake is the ideal candidate for an executive position with a thriving local company **Belonging** John McCallum, 2009 John McCallum's new history explores the relationship between 20th century Australian drama and a developing concept of nation The book focuses on the creative tension sparked by dueling impulses between nationalism and cosmopolitanism and between artistic seriousness and larrikin populism It explores issues such as the domineering influence of European high culture the ongoing popularity of representational realism the influence of popular theatrical forms the ambivalence between affection and aggression of much Australian humour and satire and the interaction between the personal and the political in drama The strength of *Belonging* is its comprehensiveness anyone studying an Australian play will find an account of it here in the context of the other works by its author or the time and place in which it was written As well as a rundown of the major writers and their works and an account of how the minor writers fitted in the book also investigates the more obscure plays and writers about whom little has been written This authoritative study of Australian drama gives an account of the relationship between our theatre and our sense of self while taking into account a broad range of influences that helped to shape both *Power and Influence* Richard Corry, 2019-07-31 The world is a complex place and this complexity is an obstacle to our attempts to explain predict and control it In *Power and Influence* Richard Corry investigates the assumptions that are built into the reductive method of explanation the method whereby we study the components of a complex system in relative isolation and use the information so gained to explain or predict the behaviour of the complex whole He investigates the metaphysical presuppositions built into the reductive method seeking to ascertain what the world must be like in order that the method could work Corry argues that the method assumes the existence of causal powers that manifest causal influence a relatively unrecognised ontological category of which forces are a paradigm example The success of the reductive method therefore is an argument for the existence of such causal influences The book goes on to show that adding causal influence to our ontology gives us the resources to solve some traditional problems in the metaphysics of causal powers laws of nature causation emergence and possibly even normative ethics What results then is not just an understanding of the reductive method but an integrated metaphysical worldview that is grounded in an ontology of power and influence

Operator David Williamson, 2005 *Influence* is a scathing and bitingly funny play about the media personalities that dominate our lives and the divisions that can shatter families *Operator* is a play about a young charming go getter Jake is the ideal candidate for an executive position with a thriving local company **Topological Recursion and its Influence in Analysis, Geometry, and Topology** Chiu-Chu Melissa Liu, Motohiko Mulase, 2018-11-19 This volume contains the proceedings of the 2016 AMS von Neumann Symposium on Topological Recursion and its Influence in Analysis Geometry and

Topology which was held from July 4-8 2016 at the Hilton Charlotte University Place Charlotte North Carolina. The papers contained in the volume present a snapshot of rapid and rich developments in the emerging research field known as topological recursion. It has its origin around 2004 in random matrix theory and also in Mirzakhani's work on the volume of moduli spaces of hyperbolic surfaces. Topological recursion has played a fundamental role in connecting seemingly unrelated areas of mathematics such as matrix models, enumeration of Hurwitz numbers and Grothendieck's dessins d'enfants, Gromov-Witten invariants, the A polynomials and colored polynomial invariants of knots, WKB analysis and quantization of Hitchin moduli spaces. In addition to establishing these topics, the volume includes survey papers on the most recent key accomplishments, discovery of the unexpected relation to semi-simple cohomological field theories and a solution to the remodeling conjecture. It also provides a glimpse into the future research direction, for example connections with the Airy structures, modular functors, Hurwitz-Frobenius manifolds and ELSV type formulas.

Multi-Criteria Decision-Making Method Based on Prioritized Muirhead Mean Aggregation Operator under Neutrosophic Set Environment Harish Garg, Nancy, The aim of this paper is to introduce some new operators for aggregating single-valued neutrosophic SVN information and to apply them to solve the multi-criteria decision-making (MCDM) problems. Single-valued neutrosophic set as an extension and generalization of an intuitionistic fuzzy set is a powerful tool to describe the fuzziness and uncertainty and Muirhead mean (MM) is a well-known aggregation operator which can consider interrelationships among any number of arguments assigned by a variable vector. In order to make full use of the advantages of both, we introduce two new prioritized MM aggregation operators such as the SVN prioritized MM (SVN-PMM) and SVN prioritized dual MM (SVN-PDMM) under SVN set environment. In addition, some properties of these new aggregation operators are investigated and some special cases are discussed. Furthermore, we propose a new method based on these operators for solving the MCDM problems. Finally, an illustrative example is presented to testify the efficiency and superiority of the proposed method by comparing it with the existing method.

Human error in socio-technical systems. A research about the influence and causality of human factors on dynamic decision making Selin Kile, 2021-09-14 Master's Thesis from the year 2017 in the subject Psychology, Work, Business Organisation, grade 1.5, Rhine-Waal University of Applied Sciences, language English, abstract: The present work addresses human error in socio-technical systems by considering the influence and causality of human factors on dynamic decision making. The theoretical framework is built by the SHEL Model from Hawkins (1993). This system-based model illustrates a spectrum of Human Factors: Software, Hardware, Environment, Liveware, and interfaces. Liveware (Software, Hardware, Environment, Liveware) between its elements in socio-technical systems (STS). The model of situation awareness in dynamic decision making from Endsley (1995a) is additionally used to describe the complex decision-making process in STS based on the situation awareness (SA) allocated in perception, comprehension, and projection and influenced by system and task as well as individual factors. A study was conducted in a company producing

airconditioning technology with the purpose to investigate and optimize problems related to the usage of company specific software among the department s sales and order processing Additionally the information flow between these departments was examined In order to specify the problem description from the company itself research questions were formulated within the scope of the mentioned theories 1 Which SHEL categories or interfaces should be improved in order to reduce failures and problems in the work within the configuration software and 2 Which insights of the model of situation awareness should additionally be considered regarding the reduction of failures and problems in the decision making process within the configuration software For answering the research questions first the need for improvement was identified within six self conducted interviews with the sales staff from the outdoor service n 2 sales staff from the indoor service n 1 order processing n 2 and one expert who was responsible for the sales staff in other countries n 1 Within Mayring s 2002 2010 qualitative data analysis critical incidents were extracted and related to the SHEL categories Additionally categories were inductively builded based on Endsley s model

Competing for Influence Barry Ferguson, 2019-07-12 Amidst growing dissatisfaction with the state of government performance and an erosion of trust in our political class *Competing for Influence* asks what sort of public service do we want in Australia Drawing on his experience in both the public and private sectors and citing academic research across the fields of public sector management industrial organisation and corporate strategy Barry Ferguson argues the case for the careful selection and application of private sector management concepts to the public service both for their ability to strengthen the public service and inform public policy These include competitive advantage competitive positioning horizontal strategy and organisational design and innovation as an all encompassing organisational adjustment mechanism to a changeable environment But these are not presented as a silver bullet and Ferguson addresses other approaches to reform including the need to rebuild the Public Sector Act the need to reconsider the interface between political and administrative arms of government and determine what is in the public interest and the need for greater independence for the public service within a clarified role This approach and its implications for public sector reform is contrasted with the straitjacket of path

dependency that presently constricts the field
