Operational Excellence and Respect Levent Turk, 2021-01-11 What if I told you Operational Excellence is not about learning and applying but unlearning and abandoning One size fits all strategies management and production systems try to impose their behavioral codes The results could only be perfect if employees were machines that worked according to preloaded software However people act by their feelings They feel depending on how they think and think according to their desires and beliefs Systems often ignore humans and try to drive their behavior But to realize the true potential we must understand the human condition and utilize the non productive energy that cannot be visualized and eliminated by systems like Lean and 6 Sigma If systems cannot measure the problems they create they cannot reach excellence Developing a Toyota like culture takes decades Still there is a way You don t need to learn anything new for Operational Excellence It is all about avoiding mistakes Most managers have similar goals make similar mistakes fail and learn the same things With the unique combination of Western Philosophy psychology and neuroscience this book decodes the secrets of Operational Excellence based on the experience of a former Toyota General Manager who learned TPS in Japan and successfully implemented it in multiple automotive OEMs Instead of telling what to do to achieve probable success I decrypt what not to do to avoid guaranteed failures If the only source of knowledge is experience as Einstein put it this book can save you many years of trial and error and common failures Reviews 5S was once 4S we added sustain to cope with cultural differences surrounding discipline The 8 wastes were once the 7 wastes we added the 8th to cope with cultural differences surrounding respect for humanity These are both excellent examples of how we often detract from wisdom by adding to it Thinking we can improve things we don t yet understand has led people down the wrong path for time immemorial Early in this book Levent Turk grabs this error in thinking and nails it to the wall with this line Human potential is not something we need to unleash but rather something we frequently block the rest of the book just gets better from that point forward The author s firsthand training in Toyota Japan senior leadership positions in Toyota over 15 years and 12 years experience implementing TPS into non Toyota production environments provides this book with solid foundations If this were the book we d inherited in the 90s

maybe we would now be surrounded by leaders who realise a high performance culture is more to do with their own beliefs in what good looks like and the conditions they create for human brains to survive in and not about training tools and tracking KPIs What others take a whole book to say Levent Turk captures in a single paragraph or sentence This is a book of a 1000 books If you are in a leadership position and want to create a high performance culture do yourself a favour Hang onto every word ponder every page digest understand reflect You will not find a better way to spend your time David Bovis

Levent Turk has written a remarkable book one that is truly unique in the genre of TPS and Lean More than a reflection of a lifetime in business it is a synthesis of ideas woven into a rich tapestry of valuable insights that readers will enjoy reflecting on and putting into action Professor Bob Emiliani *New Directions in Technological Pedagogical Content Knowledge Research* Dr. Myint Swe Khine,2015-05-01 In the past decades wide ranging research on effective integration of technology in instruction have been conducted by various educators and researchers with the hope that the affordances of technology might be leveraged to improve the teaching and learning process However in order to put the technology in optimum use knowledge about how and in what way technology can enhance the instruction is also essential A number of theories and models have been proposed in harnessing the technology in everyday lessons Among these attempts Technological and Pedagogical Content Knowledge TPACK framework introduced by Mishra and Koehler has emerged as a representation of the complex relationships between technology pedagogy and content knowledge The TPACK framework extends the concept of Shulman s pedagogical content knowledge PCK which defines the need for knowledge about the content and pedagogical skills in teaching activities Since then the framework has been embraced by the educational technology practitioners instructional designers and educators TPACK research received increasing attention from education and training community covering diverse range of subjects and academic disciplines and significant progress has been made in recent years This book attempts to bring the practitioners and researchers to present current directions trends and approaches convey experience and findings and share reflection and vision to improve science teaching and learning with the use of TPACK framework A wide array of topics will be covered in this book including applications in teacher training designing courses professional development and impact on learning intervention strategies and other complex educational issues Information contained in this book will provide knowledge growth and insights into effective educational strategies in integration of technology with the use of TPACK as a theoretical and developmental tool The book will be of special interest to international readers including educators teacher trainers school administrators curriculum designers policy makers and researchers and complement the existing literature and published works *Federal Information Sources & Systems* , **Departments of Transportation and Treasury and Independent Agencies Appropriations Bill, 2004** United States.
