*Information Communication Technology in Education* Thiam Seng Koh, Sai Choo Lee, 2008 This book seeks to present a comprehensive review of Singapore's ICT Masterplans in education providing a rare behind the scenes look at policy planning as well as the lessons learnt and insights gained from the past decade of the use of ICT in teaching and learning. Since 1997 when the First Masterplan was launched to 2008 schools and teachers have made great strides in their use of ICT for education at all levels primary secondary and junior college. The seeds of this change were planted in the Pioneer Years 1980-1996 which marked the pre Masterplan period and they began to germinate in the momentous Foundation Years 1997-2002 when the First Masterplan got underway. The subsequent period of the Engaging Years 2003-2008 outlines the growth of the Second Masterplan while the Future Years present the vision of what the future of ICT will look like in Singapore schools in 2009 and beyond. This comprehensive coverage of the evolution of ICT use in Singapore schools includes views and reflections from key individuals involved in the planning and implementation of the two ICT Masterplans: students, teachers, ICT experts and policy makers. It also includes articles detailing significant projects and programmes of the First and Second ICT Masterplans.

*Information and Communications Technology for All* Colin A. Hardy, 2000 This practical text focuses on access to the curriculum for pupils with learning difficulties. It covers how ICT can aid curriculum access, procedures for assessing pupils, ICT provision, choosing and reviewing software, conducting an audit of individual staff, ICT skills, implementing relevant in-service training, using ICT to aid record keeping, report writing, IEPs and worksheets.

**International Handbook of Information Technology in Primary and Secondary Education** Joke Voogt, Gerald Knezek, 2008-08-26 Since the introduction of the computer into education in the 1960s its potential for K-12 education has been widely recognized. The terminology used at times confusing due to rapid technology change has continuously evolved. We are in transition to an information society and the term computer technology has been replaced by information technology, IT or information and communication technology, ICT. New demands from the information society require education to focus on information management and communication skills for which IT can be an essential resource. IT offers promising environments and tools to support new approaches to teaching and learning. Despite major investments the implementation of IT in education has been a persistent problem. And although it is generally assumed that IT has high potential for improving education, major research findings have only recently confirmed positive results of IT on students' performance. While there is a vast amount of research on information technology, IT in K-12 education, most of it is scattered. Until now a unified presentation of the research from a broad international perspective has not been accomplished. As a ground-breaking publication, the two-volume *International Handbook on Information Technology* fully synthesizes the major issues and directions of research in the field. One major focus of the Handbook is the design and potential of IT-based student learning environments. Offering the latest research in IT and the learning process, distance learning and emerging technologies for education, these chapters address the critical issue of the potential for IT to improve K-12 education. A

second important theme deals with the implementation of IT in educational practice In these chapters barriers and opportunities for IT implementation are studied from several perspectives the teacher the curriculum the school organization and educational policy Curriculum competencies and attitudes teacher learning schools and international and regional programs and policies are examined to improve understanding how the implementation of IT in K 12 educational practice can be supported Additional topics addressed in the Handbook include the role of education in the information society threats to equity in education and as well various approaches to research in IT in education The International Handbook on Information Technology in Primary and Secondary Education provides researchers policy makers and practitioners with an integrated and detailed overview of this complex field making it an essential reference for all libraries and educators
