

What is learning?

Learning is anything that is learned from experience or by being taught.

Learning Theories

Biological, Behavioral, and Social/Observational Theories

1. Behaviorism is a thought process that believes psychology should limit itself to only studying behaviors that can be observed (measurable actions) and that psychology shouldn't attempt to study mental processes. Responses are received from external stimuli, and the learner is passive. It is approached with classical and operant conditioning. Contributors: B.F. Skinner, John B. Watson.
2. Cognitivism studies people's abilities that cannot be explained simply by a behaviorist approach (language, reasoning, thinking). It is the process of learning that is internal such as learning, storing, and processing information and is approached by planning and setting goals. Contributors: Gordon Bower, George Miller, W.K. Estes.
3. Connectivism consists of frameworks that help understand learning when it comes to technology. It focuses on how the internet and other technologies open new opportunities for learning and also focuses on the relationship between response and stimulus. It can also be approached with memorizing numbers and pattern recognition. Contributors: David Rumelhart, James McClelland, Edward Thorndike.
