Towards Green ICT Ramjee Prasad, Shingo Ohmori, Dina Simunic, 2022-09-01 ICT is playing an increasingly important role in both business and individual's private life. It has increased international interconnectedness and speed up the process of globalization. But on the other side, the total energy consumption by the communication and networking devices and the relevant global CO₂ emission is increasing exponentially. ICT has in many ways a vital role to play. It accounts for about two percent of global CO₂ emissions. Telecommunications applications can have a direct tangible impact on lowering greenhouse gas emissions, power consumption and achieve efficient recycling of equipment waste. This book is the outcome of the special session on Green Communications at The 12th International Symposium on Wireless Personal Multimedia Communications WPMC held in September 09 in Sendai, Japan. To the best of the editors' knowledge, this is the first book on the Green Information and Communication Technologies (ICT) and can be considered a milestone and a key tool aimed at driving the industrial, scientific and academic efforts of the international community to guarantee a greener future to the whole planet.
