presents the latest scientific research and trends in experimental economics with particular focus on neuroeconomics. Derived from the 2016 Computational Methods in Experimental Economics CMEE conference held in Szczecin Poland this book features research and analysis of novel computational methods in neuroeconomics. Neuroeconomics is an interdisciplinary field that combines neuroscience, psychology and economics to build a comprehensive theory of decision making. At its core, neuroeconomics analyzes the decision making process not only in terms of external conditions or psychological aspects but also from the neuronal point of view by examining the cerebral conditions of decision making. The application of IT enhances the possibilities of conducting such analyses. Such studies are now performed by software that provides interaction among all the participants and possibilities to register their reactions more accurately. This book examines some of these applications and methods. Featuring contributions on both theory and application, this book is of interest to researchers, students, academics and professionals interested in experimental economics, neuroeconomics and behavioral economics.

Accounting Information Disclosure & Collective Bargaining NA NA, 2015-12-26 **Innovation and Institutional Development for Public Policy** D. N. Gupta, Sushil, 2024-10-15

This book offers a comprehensive perspective on policy theories, policy formulation and implementation and alternative paradigm for dealing with complex social and economic systems. It presents insights into policies on major development sectors including health, education, urbanization, climate change, innovation, advanced manufacturing and economic growth. It delves into why public policies matter more than resources and are crucial for shaping the future of a country. It attempts a pioneering effort and delineates a complexity theory framework to deal with uncertainty, nonlinearity, emergence and evolution. It comprises systems thinking, design thinking, complexity thinking and tools for complexity analysis. Applicable to a policy system, economy, business and organization, the complexity theory relies on phenomena like emergence, self-organizing, property adaptation, coevolution and path dependency in a clear departure from reductionism and Newtonian paradigm. Through academic rigor it makes a convincing case for better understanding of application of complexity theory. It covers real world examples and case studies related to evolution of economies of silicon valleys, Bengaluru, India and San Francisco Bay, USA. These cases underscore the essentiality of complexity theory. In terms of policy formulations, the book contains a policy design framework covering the science of policymaking, innovative approaches and methodology for policy design. To deal with dynamic systems it includes a step by step guide for the application of system dynamics. It articulates alternative paradigm, adaptive policies and policy design, alternative theory, complexity theory and new public organizations and institutional development for meeting the challenges of the 21st century. Aiming to reduce fuzziness, the book combines both researcher's in depth analysis as well as practitioner's perspective, thus serving as a vital read for scholars of public policy management and economics. It emphasizes the primacy of policy process to discern deep understanding from the ground and to integrate micro level realities and macro level requirements. It argues for change from Weberian bureaucratic model to adaptive approaches and recommends policy
