As we approach the end of the 20th century we can look back upon the achievements that have been made in a variety of human endeavours with pride Enormous strides have been made to improve the quality of life of millions of people through the application of the scientific discoveries made during this and past centuries The 20th century will be remembered as much for the mass exploitation of scientific discovery as for the discoveries themselves The technological age has meant that the human being is able to contemplate activities which defy nature For example some of the work involved in the preparation of these proceedings has been done whilst travelling at over 500 miles per hour seven miles above the surface of the earth It is not difficult to conjecture about the effect that this relatively recent technology has had upon a number of systems Air transportation has provided a number of benefits including such disparate examples such as enabling holidays famine relief and the cross fertilisation of cultural practices from other lands Equally there have been undesirable effects such as enabling the means of mass destruction interference in other cultures and the speedy transportation of disease Moreover the physical presence of the aeroplane itself represents the consumption of fossil fuels a source of pollution and a change in the way think about life The view expressed here is of course the view of an inhabitant of the western world

**Supporting Reuse in Business Case Development** Bart-Jan van Putten, 2013-01-11. Determining the value of an information system for an organization is challenging, especially before the execution of the project in which the system is put into operation. Many organizations cope with problems when having to identify the potential benefits of the investment, while even more have difficulties with their quantification. An analysis in which multiple possible investments and approaches are compared with respect to their benefits, costs, and risks is called a business case (BC). The current frameworks that can be used to develop BCs offer too little support for the aforementioned challenges. Opportunities to improve BC frameworks and thereby the efficiency and effectiveness of BC development are therefore explored in this dissertation.
