

corpus of work which is only sketchily presented. In addition, one begins to guess, perhaps rightfully so, that the problem is not so much expository, but rather that the theory of networks is, currently, a misnomer.

Nevertheless, there is gold in these waters. If Forsgren did not choose to focus as extensively on the conventional framing of the theory of the firm as a problem of boundaries (such as, whether to rely on markets or to integrate internationally), he may have gone further in developing his embryonic, but intriguing insights into what constitutes the advantage of the firm. When the lense on this issue moves from looking at the firm *sui generis* to its membership in a wider industrial network, then the notion of advantage as embedded in a body of relationships raises a multitude of important questions.

This book, despite its brevity, does a fine job in stimulating new thinking on perennial problems. It looks ambitiously at the evolution of the firm as a network of subsidiaries, within a network of other firms. There is a lot more to be done, but this book provides an excellent start.

In spite of much research effort, organizational theory on information technology (IT) has not yet reached full maturity. Deterministic approaches are still dominant. Child and Loveridge report on a large-scale project of comparative case studies using a non-deterministic perspective. The introduction of microelectronics-based IT is investigated, and its impact on the nature of work and employment and the quality of the services provided to the public.

The project was carried out by the international research team 'Microelectronics in the Service Sector', consisting of research teams from six European countries: Belgium, Britain, Germany, Hungary, Italy, and Sweden. Each team studied six organizations in three selected service sectors: banking, retailing, and health care. Research material from 39 case studies was analyzed, including additional cases from the health sector in China, Yugoslavia, and Poland. The fieldwork was done between 1982 and 1985.

The report on the results by sector contains a lot of valuable material. For each sector, the relevant contextual features are described first, bearing in mind national characteristics. With reference to this contextual background, case studies of the introduction of new IT are reported. The accounts are certainly thorough, thematically ordered, and illustrated by a multitude of examples from the cases. References are also made to other empirical studies.

Reports of empirical research often lack an adequate account of the
