

Information Technology in Languages for Specific Purposes. Issues and Prospects.

Elisabet Arnó Macià, Antonia Soler Cervera & Carmen Rueda Ramos (eds).

New York: Springer, 2006. 266 pages. ISBN 0-387-28595-4.

The application of Information Technology (IT) to language learning and research is a relatively new field of scholarly work whose possibilities have not ceased to increase hand-in-hand with technological advances. In the case of Languages for Specific Purposes (LSP), traditionally concerned with issues such as needs analysis, learner's autonomy and use of authentic materials among others, IT can be extremely useful in producing highly interactive learning environments adapted to students' needs, and, at the same time, innovative studies on language acquisition. The present volume is a good example of it, and is particularly welcome because few studies have been published on the relationship between IT and LSP. This selection of papers and keynote lectures given during CILFE6, an International Conference held in Vilanova i la Geltrú (Barcelona, Spain) in 2003, offers an ample and varied overview of recent trends in technology-based language teaching and research from different parts of the world. Its international dimension is not only derived from the fact that contributors come from a variety of countries and continents, but also because several of the projects described involve cross-cultural issues. In spite of its internationalism, or maybe because of it, English is the target language in the majority of cases brought together, all of which are set within the higher education academic context.

The book begins with an introduction, where the editors carefully frame and analyze the essays that make up the volume. It ends with a concluding chapter in which they summarize the main issues discussed throughout and advocate the natural integration of IT into LSP teaching and research. The thirteen chapters in-between have been organized into five thematically related sections: *Corpus-based studies*, *Computer-mediated communication*, *Specific technology-based projects in different educational settings*, *Technology and learner autonomy in higher education*, and *Terminology and lexis: teaching and translation*. In the last pages (263-266) a useful index of topics in alphabetical order has also been included.

Formal Methods for Components and Objects Bernhard K. Aichernig, Frank S. de Boer, Marcello M. Bonsangue,2011-12-16 The focus in development methodologies of large and complex software systems has switched in the last two decades from functional issues to structural issues this holds for both

the object oriented and the more recent component based software engineering paradigms Formal methods have been applied successfully to the verification of medium sized programs in protocol and hardware design for quite a long time However their application to the development of large systems requires more emphasis on specification modeling and validation techniques supporting the concepts of reusability and modifiability and their implementation in new extensions of existing programming languages like Java This state of the art survey presents the outcome of the 9th Symposium on Formal Methods for Components and Objects held in Graz Austria in November December 2010 The volume contains 20 revised contributions submitted after the symposium by speakers from each of the following European IST projects the FP7 IST project AVANTSSAR on automated validation of trust and security of service oriented architectures the FP7 IST project DEPLOY on industrial deployment of advanced system engineering methods for high productivity and dependability the ESF COST Action IC0701 on formal verification of object oriented software the FP7 IST project HATS on highly adaptable and trustworthy software using formal models the FP7 SST project INESS on an integrated European railway signalling system the FP7 IST project MADES on a model driven approach to improve the current practice in the development of embedded systems the FP7 IST project MOGENTES on model based generation of tests for dependable embedded systems as well as the FP7 IST project MULTIFORM on integrated multi formalism tool support for the design of networked embedded control systems

Technology-Enhanced Language Learning for Specialized Domains Elena Martín-Monje, Izaskun Elorza, Blanca García Ríaza, 2016-03-10 Technology Enhanced Language Learning for Specialized Domains provides an exploration of the latest developments in technology enhanced learning and the processing of languages for specific purposes It combines theoretical and applied research from an interdisciplinary angle covering general issues related to learning languages with computers assessment mobile assisted language learning the new language massive open online courses corpus based research and computer assisted aspects of translation The chapters in this collection include contributions from a number of international experts in the field with a wide range of experience in the use of technologies to enhance the language learning process The essays have been brought together precisely in recognition of the demand for this kind of specialised tuition offering state of the art technological and methodological innovation and practical applications The topics covered revolve around the practical consequences of the current possibilities of mobility for both learners and teachers as well as the applicability of updated technological advances to language learning and teaching particularly in specialized domains This is achieved through the description and discussion of practical examples of those applications in a variety of educational contexts At the beginning of each thematic section readers will find an introductory chapter which contextualises the topic and links the different examples discussed Drawing together rich primary research and empirical studies related to specialized tuition and the processing of languages Technology Enhanced Language Learning for Specialized Domains will be an invaluable resource for academics researchers and postgraduate students in the fields of education computer assisted
