Infrared Analysis Of Peptides And Proteins Principles And Applications:

Infrared Analysis of Peptides and Proteins Bal Ram Singh, 2000 Infrared radiation IR analysis is proving a powerful tool for understanding the structure and function of peptides and proteins but the method remains relatively little known This book examines these applications in detail providing a valuable source for both basic methods and new refinements

Biological and Biomedical Infrared Spectroscopy A. Barth, P.I. Haris, 2009-09-02 Although infrared spectroscopy has been applied with success to the study of important biological and biomedical processes for many years key advances in this vibrant technique have led to its increasing use ranging from characterisation of individual macromolecules DNA RNA lipids proteins to human tissues cells and their components Infrared spectroscopy thus has a significant role to play in the analysis of the vast number of genes and proteins being identified by the various genomic sequencing projects Whilst this book gives an overview of the field it highlights more recent developments such as the use of bright synchrotron radiation for recording infrared spectra the development of two dimensional infrared spectroscopy and the ability to record infrared spectra at ultrafast speeds The main focus is on the mid infrared region since the great majority of studies are carried out in this region but there is increasing use of the near infrared for biomedical applications and a chapter is devoted to this part of the spectrum Major advances in theoretical analysis have also enabled better interpretation of the infrared spectra of biological molecules and these are covered The editors Professor Andreas Barth of Stockholm University Stockholm Sweden and Dr Parvez I Haris of De Montfort University Leicester U K who both have extensive research experience in biological infrared spectroscopy per se and in its use in the solution of biophysical problems have felt it timely therefore to bring together this book The book is intended for use both by research scientists already active in the use of biological infrared spectroscopy and for those coming new to the technique Graduate students will also find it useful as an introduction to the technique

Methods in Protein Structure and Stability Analysis: Vibrational spectroscopy Vladimir N. Uversky, 2007 Protein research is a frontier field in science Proteins are widely distributed in plants and animals and are the principal constituents of the protoplasm of all cells and consist essentially of combinations of amino acids in peptide linkages Twenty different amino acids are commonly found in proteins and serve as enzymes structural elements hormones immunoglobulins etc and are involved throughout the body and in photosynthesis This book gathers new leading edge research from throughout the world in this exciting and exploding field of research

Unfolded Proteins, 2002-11-04 A variety of complementary techniques and approaches have been used to characterize peptide and protein unfolding induced by temperature pressure and solvent Volume 62 Unfolded Proteins assembles these complementary views to develop a more complete picture of denatured peptides and proteins The unifying observation common to all chapters is the detection of preferred backbone conformations in experimentally accessible unfolded states Peptide and protein unfolding induced by temperature pressure and solvent Denatured peptides and proteins Detection of preferred backbone conformations in experimentally accessible unfolded states

Chiral Analysis Kenneth W. Busch, Marianna A. Busch, 2011-10-13 Chiral Analysis covers an important area of analytical chemistry of relevance to a wide variety of scientific professionals. The target audience is scientific professionals with an undergraduate background in chemistry or a related discipline, specifically organic chemists, researchers in drug discovery, pharmaceutical researchers involved with process analysis or combinatorial libraries, and graduate students in chemistry. Chapters have been written with the nonspecialist in mind so as to be self-contained. Broad coverage of spectroscopic and separation methods is covered in a single volume. Up-to-date and detailed review of the various techniques available and/or under development in this field. Contributions from leading experts in the field.

Approaches to the Conformational Analysis of Biopharmaceuticals Roger L. Lundblad, 2009-12-15 The activity of many biopharmaceutical polymers is dependent on conformation, and the next several years will see increased interest in the conformational analysis of these polymers resulting from the development of biosimilar or follow-on biological products. While a wide variety of approaches to analysis exists, finding the most viable ones would be a challenge.

Biosensors Pier Andrea Serra, 2011-07-18 A biosensor is a detecting device that combines a transducer with a biologically sensitive and selective component. Biosensors can measure compounds present in the environment, chemical processes, food, and the human body at low cost if compared with traditional analytical techniques. This book covers a wide range of aspects and issues related to biosensor technology, bringing together researchers from 19 different countries. The book consists of 27 chapters written by 106 authors and is divided into three sections: Biosensors Technology and Materials; Biosensors for Health; and Biosensors for Environment and Biosecurity.

Spectroscopy and Modeling of Biomolecular Building Blocks Jean-Pierre Schermann, 2007-10-16 Spectroscopy and Modeling of Biomolecular Building Blocks presents an overview of recent advances in the intertwining of the following research fields: photon and electron spectroscopy, quantum chemistry, modelling, and mass spectrometry. The coupling of these disciplines offers a new point of view to the understanding of isolated elementary building blocks of biomolecules and their assemblies. It allows the unambiguous separation between intrinsic properties of biomolecular systems and those induced by the presence of their environment. The first chapters provide background in modelling: I. frequency-resolved spectroscopy using microwave, infrared, and UV photons; time-resolved spectroscopy in the femtosecond domain; and energy-resolved electron spectroscopy. II. and production of gas-phase neutral and ionic biomolecular species; mass spectrometry; ion mobility; and BIRD techniques. III. Chapter IV is devoted to case studies of gas-phase experimental investigations coupled to quantum or classical calculations. The topics are structural studies of nucleobases and oligonucleotides; peptides and proteins; sugars; neuromolecules; non-covalent complexes; chiral systems; interactions of low-energy electrons with biomolecules in the radiation chemistry context; and very large gas-phase biomolecular systems. The fifth chapter concerns the link between gas-phase and liquid-phase. Different treatments of solvation are illustrated through examples, pointing out the influence of progressive addition of water molecules upon properties of nucleobases, peptides, sugars, and neuromolecules. Offer a new perspective to the understanding
