**Green Industrial Applications of Ionic Liquids** Robin D. Rogers, Kenneth Richard Seddon, Sergei Volkov, 2012-12-06

This book contains the lecture notes for the NATO Advanced Research Workshop on the Green Industrial Applications of Ionic Liquids held April 12th\_16 2000 in Heraklion Crete Greece This was the first international meeting devoted to research in the area of ionic liquids salts with melting points below 100 °C and was intended to explore the promise of ionic liquids as well as to set a research agenda for the field It was the first international meeting dedicated to the study and application of ionic liquids as solvents and forty one scientists and engineers from academia industry and government research laboratories as well as six industry observers and four student assistants met to discuss the current and future status of the application of ionic liquids to new green industrial technologies It was immediately clear that the number of organic chemists and engineers working in the field needed to be increased It was also clear that the declining interest in high temperature molten salts and subsequent increase in low melting ionic

liquid solvents had not yet taken hold in Eastern Europe Participants from NATO Partner Countries contributed significant expertise in high temperature molten salts and were able to take back a new awareness and interest in ionic liquid solvents

**Modern Vibrational Spectroscopy and Micro-Spectroscopy** Max Diem, 2015-06-16 Modern Vibrational Spectroscopy and Micro Spectroscopy Theory Instrumentation and Biomedical Applications unites the theory and background of conventional vibrational spectroscopy with the principles of microspectroscopy It starts with basic theory as it applies to small molecules and then expands it to include the large biomolecules which are the main topic of the book with an emphasis on practical experiments results analysis and medical and diagnostic applications This book is unique in that it addresses both the parent spectroscopy and the microspectroscopic aspects in one volume Part I covers the basic theory principles and instrumentation of classical vibrational infrared and Raman spectroscopy It is aimed at researchers with a background in chemistry and physics and is presented at the level suitable for first year graduate students The latter half of Part I is devoted to more novel subjects in vibrational spectroscopy such as resonance and non linear Raman effects vibrational optical activity time resolved spectroscopy and computational methods Thus Part 1 represents a short course into modern vibrational spectroscopy Part II is devoted in its entirety to applications of vibrational spectroscopic techniques to biophysical and bio structural research and the more recent extension of vibrational spectroscopy to microscopic data acquisition Vibrational microscopy or microspectroscopy has opened entirely new avenues toward applications in the biomedical sciences and has created new research fields collectively referred to as Spectral Cytopathology SCP and Spectral Histopathology SHP In order to fully exploit the information contained in the micro spectral datasets methods of multivariate analysis need to be employed These methods along with representative results of both SCP and SHP are presented and discussed in detail in Part II
