Burke, Clayton W. Commander, 2022-01-01 This book provides a comprehensive guide for selective venous sampling procedures and the role of interventional radiologists in the care and treatment of patients with endocrine disorders Disorders of the endocrine system involve an imbalance in the natural homeostasis of the hormones produced by the glands in the body There are a variety of endocrine conditions that are characterized by either hormonal hyposecretion or hypersecretion Percutaneous selective venous sampling is the gold standard diagnostic tool for the medical and surgical management of patients with a variety of such disorders Selective venous sampling is a minimally invasive interventional procedure that interventional radiologists perform to localize sites of abnormal hormone secretion Computed tomography and magnetic resonance imaging are the most used diagnostic imaging modalities in patients with the suspected endocrine disorder however their specificity is not optimal and identifying a culprit gland is difficult based on imaging findings alone Therefore the ultimate decision for management depends on the outcome of selective venous sampling As these various venous samplings are increasingly performed worldwide the collaboration between interventional

radiology endocrinology surgical endocrinology surgical oncology neurosurgery and gynecology teams is essential With limited literature on the topic this volume fills the gap with in depth coverage of selective venous sampling alongside the pathophysiology epidemiology clinical diagnosis as well as medical surgical and interventional management of endocrine disorders The book is divided into five parts Clinical Laboratory and Radiological Diagnosis of Endocrine Disorders Selective Venous Sampling in Interventional Radiology Medical Treatment of Endocrine Disorders Surgical Treatment of Endocrine Disorders Interventional Treatment of Endocrine Disorders Throughout these parts endocrine disorders that require venous sampling are covered in depth primary aldosteronism primary hyperparathyroidism Cushing s disease hormone secreting pancreatic adenomas and androgen secreting ovarian tumors There is additionally an emerging role for interventional management in thyroid gland disorders which is covered here This is an ideal guide for interventional radiologists caring for patients with endocrine disorders as well as endocrinologists endocrine surgeons surgical oncologists otolaryngologists neurosurgeons gynecologists and nephrologists

Immunology of the GI Tract Luis Rodrigo,2022-12-21 The intestine is the largest digestive organ in the human body and one of the largest organs in contact with the outside world In addition to digesting food to facilitate the absorption of nutrients it has a variety of other functions including the transmission of information and regulation of the metabolism Due to its unique structure the intestine is constantly exposed to various antigens and microbes To protect the body from pathogens while also maintaining a stable environment the human intestinal tract has evolved unique regional immune characteristics maintained by the mature intestinal mucosal immune system This intricate system involves intestinal epithelial cells and intestinal lymphoid tissue composed of Peyer s patches isolated lymphoid follicles mesenteric lymph nodes and so on The congenital and adaptive immune mechanisms created by the unique structure function and microenvironment of the intestine differ from those of the central and peripheral immune organs forming the regional immunity of the intestine Intestinal flora also plays an important role in maintaining intestinal homeostasis altering the structure and function of the immune system reshaping the immune microenvironment and promoting interference with the development of specific diseases In fact the immune function of the intestinal region directly affects the development of many intestine specific diseases However the integrity of this function depends on the expression of congenital genes and the regulation of the neuroendocrine system The microenvironment created by intestinal flora and its products also affects the immunity of the intestinal region In early life appropriate intestinal colonization by specific microflora stimulates the maturation of the intestinal mucosa associated lymphoid tissue If the appropriate intestinal flora fails to form during this life stage the function of the intestinal immune system becomes impaired leading to increased incidence and or morbidity of certain intestinal diseases including ulcerative colitis Crohn s disease and others

Infections Causing Human Cancer Harald zur Hausen,2007-09-24 Infections must be thought as one of the most important if not the most important risk factors for cancer development in humans Approximately 15 20% of all cases of cancer around the world

are caused by viruses The establishment of a causal relationship between the presence of specific infective agents and certain types of human cancer represents a key step in the development of novel therapeutic and preventive strategies In this book Professor zur Hausen Nobel Prize in Physiology Medicine 2008 provides a thorough and comprehensive overview on carcinogenic infective agents viruses bacteria parasites and protozoons as well as their corresponding transforming capacities and mechanisms The result is an invaluable and instructive reference for all oncologists microbiologists and molecular biologists working in the area of infections and cancer The author was among the first scientists to reveal the cervical cancer inducing mechanisms of human papilloma viruses and isolated HPV16 and HPV18 and as early as 1976 published the hypothesis that wart viruses play a role in the development of this type of cancer
