Probabilistic Search for Tracking Targets Irad Ben-Gal,Eugene Kagan,2013-03-25 Presents a probabilistic and information theoretic framework for a search for static or moving targets in discrete time and space Probabilistic Search for Tracking Targets uses an information theoretic scheme to present a unified approach for known search methods to allow the development of new algorithms of search The book addresses search methods under different constraints and assumptions such as search uncertainty under incomplete information probabilistic search scheme observation errors group testing search games distribution of search efforts single and multiple targets and search agents as well as online or offline search schemes The proposed approach is associated with path planning techniques optimal search algorithms Markov decision models decision trees stochastic local search artificial intelligence and heuristic information seeking methods Furthermore this book presents novel methods of search for static and moving targets along with practical algorithms of partitioning and search and screening Probabilistic Search for Tracking Targets includes complete material for undergraduate and graduate courses in modern applications of probabilistic search decision making and group testing and provides several directions for further research in the search theory The authors Provide a generalized information theoretic approach to the problem of real time search for both static and moving targets over a discrete space Present a theoretical framework which covers known information theoretic algorithms of search and forms a basis for development and analysis of different algorithms of search over probabilistic space Use numerous examples of group testing search and path planning algorithms to illustrate direct implementation in the form of running routines Consider a relation of the suggested approach with known search theories and methods such as search and screening theory search games Markov decision process models of search data mining methods coding theory and decision trees Discuss relevant search applications such as quality control search for nonconforming units in a batch or a military search for a hidden target Provide an accompanying website featuring the algorithms discussed throughout the book along with practical implementations procedures

Algorithmic Learning Theory Arun K. Sharma,Setsuo Arikawa,1996-10-09 This book constitutes the refereed proceedings of the 7th International Workshop on Algorithmic Learning Theory ALT 96 held in Sydney Australia in October 1996 The 16 revised full papers presented were selected from 41 submissions also included are eight short papers as well as four full length invited contributions by Ross Quinlan Takeshi Shinohara Leslie Valiant and Paul Vitanyi and an introduction

by the volume editors The book covers all areas related to algorithmic learning theory ranging from theoretical foundations of machine learning to applications in several areas Stable Stems Daniel C. Isaksen, 2020-02-13 The author presents a detailed analysis of 2 complete stable homotopy groups both in the classical context and in the motivic context over \mathbb{C} He uses the motivic May spectral sequence to compute the cohomology of the motivic Steenrod algebra over \mathbb{C} through the 70 stem He then uses the motivic Adams spectral sequence to obtain motivic stable homotopy groups through the 59 stem He also describes the complete calculation to the 65 stem but defers the proofs in this range to forthcoming publications In addition to finding all Adams differentials the author also resolves all hidden extensions by 2 and through the 59 stem except for a few carefully enumerated exceptions that remain unknown The analogous classical stable homotopy groups are easy consequences The author also computes the motivic stable homotopy groups of the cofiber of the motivic element This computation is essential for resolving hidden extensions in the Adams spectral sequence He shows that the homotopy groups of the cofiber of are the same as the E_2 page of the classical Adams Novikov spectral sequence This allows him to compute the classical Adams Novikov spectral sequence including differentials and hidden extensions in a larger range than was previously known **Genetic and Evolutionary Computation – GECCO 2004** Kalyanmoy Deb, Riccardo Poli, Wolfgang Banzhaf, Hans-Georg Beyer, Edmund Burke, Paul Darwen, Dipankar Dasgupta, Dario Floreano, James A. Benedict, David J. Schlesinger, Steven J. Goetsch, Brian D.

Kavanagh, 2014-08-01 Written by internationally known experts in the field Stereotactic Radiosurgery and Stereotactic Body Radiation Therapy examines one of the fastest developing subspecialties within radiation oncology These procedures deliver large doses of radiation in one to five sessions to a precisely determined target Often these techniques have proven to be as or more effective than traditional radiation therapy techniques while at the same time being cost efficient and convenient for the patient These techniques however require careful planning specialized equipment and well trained staff This volume provides a cutting edge look at the biological and technical underpinnings of SRS and SBRT techniques It includes a history of the development of SRS and SBRT clinical applications of the techniques dedicated devices for delivering precisely shaped high doses of radiation use of in room imaging for treatment planning and treatment guidance immobilization techniques for

accurate targeting and future developments that will continue to evolve and refine existing techniques A valuable introduction to those just learning about these specialized techniques and an ideal reference for those who are already implementing them this book covers a wide variety of topics with clear discussions of each aspect of the technology employed

Dog Behaviour, Evolution, and Cognition Ádám Miklósi, 2015 This is the first book to collate and synthesize the recent burgeoning primary research literature on dog behaviour evolution and cognition The author presents a new ecological approach to the understanding of dog behaviour demonstrating how dogs can be the subject of rigorous and productive scientific study without the need to confine them to a laboratory environment This second fully updated edition of Dog Behaviour Evolution and Cognition starts with an overview of the conceptual and methodological issues associated with the study of the dog followed by a brief description of their role in human society An evolutionary perspective is then introduced with a summary of current research into the process of domestication The central part of the book is devoted to issues relating to the cognitive aspects of behaviour which have received particular attention in recent years from both psychologists and ethologists The book's final chapters introduce the reader to many novel approaches to dog behaviour set in the context of behavioural development and genetics This second edition recognises and discusses the fact that dogs are increasingly being used as model organisms for studying aspects of human biology such as genetic diseases and ageing Specific attention is also given in this edition to attachment behaviour which emerges between humans and dogs the importance of inter specific communication in the success of dogs in human communities and the broad aspects of social cognition and how this may contribute to human dog cooperation Directions for future research are highlighted throughout the text which also incorporates links to human and primate research by drawing on homologies and analogies in both evolution and behaviour The book will therefore be of relevance and use to anyone with an interest in behavioural ecology including graduate students of animal behaviour and cognition as well as a more general audience of dog enthusiasts biologists psychologists veterinarians and sociologists **Internet of Things and Big Data Technologies for Next**

Spatial Cognition Christian Freksa, Christopher Habel, Karl F. Wender, 2003-05-20 Research on spatial cognition is a rapidly evolving interdisciplinary enterprise for the study of spatial representations and cognitive spatial processes be they real or abstract human or machine Spatial cognition brings together a variety of search methodologies empirical investigations on human and animal orientation and navigation studies of communicating spatial knowledge using language and graphical or other pictorial means the development of formal models for representing and processing spatial knowledge and computer implementations to solve spatial problems to simulate human or animal orientation and navigation behavior or to reproduce spatial communication patterns These approaches can interact in interesting and useful ways Results from empirical studies call for formal explanations both of the underlying memory structures and of the processes operating upon them we can develop and implement operational computer models obeying the relationships between objects and events described by the formal models we can empirically test the computer models under a variety of conditions and we can compare the results to the results from the human or animal experiments A disagreement between these results can provide useful indications towards the refinement of the models
