Hierarchy Perspectives For Ecological Complexity:

Hierarchy T. F. H. Allen, Thomas B. Starr, 1982 **Hierarchy** H. Allen, Tomas B. Starr, **Foundation Papers in Landscape Ecology** John A. Wiens, 2007 The editors begin with articles that illuminate the discipline's diverse scientific foundations such as L **A New Ecology** Sven Erik Jørgensen, Brian D. Fath, Simone Bastianoni, Joao C. Marques, Felix Muller, S. Nors Nielsen, Bernard D. Patten, Enzo Tiezzi, Robert E. Ulanowicz, 2011-08-30 A New Ecology presents an ecosystem theory based on the following ecosystem properties: physical openness, ontic openness, directionality, connectivity, a complex dynamic for growth and development, and a complex dynamic response to disturbances. Each of these properties is developed in detail to show that these basic and characteristic properties can be applied to explain a wide spectrum of ecological observations and conceptions. It is also shown that the properties have application for environmental management and for assessment of ecosystem health. Demonstrates an ecosystem theory that can be applied to explain ecological observations and rules. Presents an ecosystem theory based upon a systems approach. Discusses an ecosystem theory that is based on a few basic properties that are characteristic for ecosystems. *Phenology: An Integrative Environmental Science* Mark D. Schwartz, 2011-04-28 Phenology is the study of plant and animal life cycle events which are triggered by environmental changes, especially temperature. Wide ranges of phenomena are included, from first openings of leaf and flower buds to insect hatchings and return of birds. Each one gives a ready measure of the environment as viewed by the associated organism. Thus phenological events are ideal indicators of the impact of local and global changes in weather and climate on the earth's biosphere. Assessing our changing world is a complex task that requires close cooperation from experts in biology, climatology, ecology, geography, oceanography, remote sensing, and other areas. This book is a synthesis of current phenological knowledge designed as a primer on the field for global change and general scientists, students, and interested members of the public. With contributions from a diverse group of over fifty phenological experts covering data collection, current research methods, and applications, it demonstrates the accomplishments and potential of phenology as an integrative environmental science.

Levels of Organization in the Biological Sciences Daniel S. Brooks, James DiFrisco, William C. Wimsatt, 2021-08-24 Scientific philosophers examine the nature and significance of levels of organization, a core structural principle in the biological sciences. This volume examines the idea of levels of organization as a distinct object of investigation, considering its merits as a core organizational principle for the scientific image of the natural world. It approaches levels of organization roughly the idea that the natural world is segregated into part-whole relationships of increasing spatiotemporal scale and complexity in terms of its roles in scientific reasoning as a dynamic, open-ended idea capable of performing multiple overlapping functions in distinct empirical settings. The contributors, scientific philosophers with longstanding ties to the biological sciences, discuss topics including the philosophical and scientific contexts for an inquiry into levels, whether the concept can actually deliver on its organizational promises, the role of levels in the development and evolution of complex

systems conditional independence and downward causation and the extension of the concept into the sociocultural realm Taken together the contributions embrace the diverse usages of the term as aspects of the big picture of levels of organization Contributors Jan Baedke Robert W Batterman Daniel S Brooks James DiFrisco Markus I Eronen Carl Gillett Sara Green James Griesemer Alan C Love Angela Potochnik Thomas Reydon Ilya T mkin Jon Umerez William C Wimsatt James Woodward *Unifying Ecology Across Scales: Progress, Challenges and Opportunities* Mary I. Development Betrayed Richard B Norgaard, 2006-05-18 Modernity promised control over nature through science material abundance through technology and effective government through rational social organization Instead of leading to this promised land it has brought us to the brink of environmental and cultural disaster Why has there been this gap between modernity's aspirations and its achievements Development Betrayed offers a powerful answer to this question Development with its unshakeable commitment to the idea of progress is rooted in modernism and has been betrayed by each of its major tenets Attempts to control nature have led to the brink of environmental catastrophe Western technologies have proved inappropriate for the needs of the South and governments are unable to respond effectively to the crises that have resulted Offering a thorough and lively critiques of the ideas behind development Richard Norgaard also offers an alternative co evolutionary paradigm in which development is portrayed as a co evolution between cultural and ecological systems Rather than a future with all peoples merging to one best way of knowing and doing things he envisions a future of a patchwork quilt of cultures with real possibilities for harmony

Multicriteria Analysis for Land-Use Management E. Beinat, Peter Nijkamp, 2012-12-06 The idea of this book started at approximately 33 000 feet somewhere above the Alps On our way to a workshop in Venice we had the opportunity of appreciating the different types of landscapes and the complex patchwork of urban areas agriculture forests rivers and lakes that can be seen from an aircraft The complexity of this puzzle and the complex task of managing its evolution became the topic of conversation for the rest of the flight It also became the topic of this book Land use management and multicriteria analysis offer countless opportunities for mutual reinforcement These two fields have developed largely independently but a trend towards the exploration of their synergies is now emerging This is clear from the recent literature on land use management spatial analysis and spatial planning which increasingly includes references to multicriteria methodologies and decision analysis At the same time a growing share of multicriteria applications now focus on environmental and land use issues This book includes contributions from authors coming from a variety of disciplines and

backgrounds All together they highlight current issues in multicriteria analysis and land use management from theoretical methodological and practical perspectives

Toward a Unified Ecology Timothy F. H. Allen,Thomas W. Hoekstra,2015-06-23 The first edition of Toward a Unified Ecology was ahead of its time For the second edition the authors present a new synthesis of their core ideas on evaluating communities organisms populations biomes models and management The book now places greater emphasis on post normal critiques cognizant of ever present observer values in the system The problem it addresses is how to work holistically on complex things that cannot be defined and this

book continues to build an approach to the problem of scaling in ecosystems Provoked by complexity theory the authors add a whole new chapter on the central role of narrative in science and how models improve them The book takes data and modeling seriously with a sophisticated philosophy of science General Technical Report SE ,1994 **Silviculture** Louise H. Foley,1998-07 **A Systems Approach to the Environmental Analysis of Pollution Minimization** Sven E. Cerny,2022-12-30 Heterarchy in World Politics challenges the fundamental framing of international relations and world politics IR theory has always been dominated by the presumption that world politics is at its core a system of states However this has always been problematic challengeable time bound and increasingly anachronistic In the 21st century world politics is becoming increasingly multi nodal and characterized by heterarchy the coexistence and conflict between differently structured micro and meso quasi hierarchies that compete and overlap not only across borders but also across economic financial sectors and social groupings Thinking about international order in terms of heterarchy is a paradigm shift away from the mainstream competing paradigms of realism liberalism and constructivism This book explores how since the mid 20th century the dialectic of globalization and fragmentation has caught states and the interstate system in the complex evolutionary process toward heterarchy These heterarchical institutions and processes are characterized by increasing autonomy and special interest capture The process of heterarchy empowers strategically situated agents especially agents with substantial autonomous resources and in particular economic resources in multi nodal competing institutions with overlapping jurisdictions The result is the decreasing capacity of macro states to control both domestic and transnational political economic processes In this book the authors demonstrate that this is not a simple breakdown of states and the states system it is in fact the early stages of a structural evolution of world politics This book will interest students scholars and researchers of international relations

theory It will also have significant appeal in the fields of world politics security studies war studies peace studies global governance studies political science political economy political power studies and the social sciences more generally
