Proceedings RMRS. ,2000 Wilderness Science in a Time of Change Conference: Wilderness as a place for scientific inquiry ,2000 Wilderness Science in a Time of Change Conference ,2000 Cultures of Peace Elise Boulding,2000-05-01 Renowned sociologist Elise Boulding offers an eminent collection of essays that emphasizes her study of civil society over the past fifty years While most media and academic attention focuses on the extreme violence in today s society Elise Boulding notes an equally significant presence of cultures and societies of peace Here in a volume that represents a life s work she revisits her theme of the connection among family community and government and offers enriching perspectives and advice on how to fuel the process of peace Boulding examines structural violence in terms of the major institutional obstacles to a more peaceful future the tension between the states and the people trapped inside them the tension between the techno sphere and the biosphere and between global systems and local know how She describes social movements around the world that are developing alternative ways of handling the great diversity of human biospheric needs on the planet In addition Boulding brings together her experiences to empower the peace building activities if we are to do better in the twenty first century than we have done in the twentieth century Provided by publisher Mountain Geography Martin F. Price,Alton C. Byers,Donald A. Friend,Thomas Kohler,Larry W. Price,2013-08-24 Mountains cover a quarter of the Earth s land surface and a quarter of the global population lives in or adjacent to these areas The global importance of mountains is recognized particularly because they provide critical resources such as water food and wood contain high levels of biological and cultural diversity and are often places for tourism and recreation and or of sacred significance This major revision of Larry Price s book Mountains and Man 1981 is both timely and highly appropriate The past three decades have been a period of remarkable progress in our understanding of mountains from an academic point of view Of even greater importance is that society at large now realizes that mountains and the people who reside in them are not isolated from the mainstream of world affairs but are vital if we are to achieve an environmentally sustainable future Mountain Geography is a comprehensive resource that gives readers an in depth understanding of the geographical processes occurring in the world s mountains and the overall impact of these regions on culture and society as a whole The volume begins with an introduction to how mountains are defined followed by a comprehensive treatment of their physical geography origins climatology snow and ice landforms and geomorphic processes soils vegetation and wildlife The concluding chapters provide an introduction to the human geography of mountains attitudes toward mountains people living in mountain regions and their livelihoods and interactions within dynamic environments the diverse types of mountain agriculture and the challenges of sustainable mountain development **Violence Through Environmental Discrimination** Günther Baechler,2013-03-09 Since all out interstate wars for the time being seem to belong to the past con flict studies focus more and more on domestic conflicts This is a broad field not only because the arbitrary line between war and sub war violence disap pears and the analyst is

confronted with phenomena reaching from criminal violence and clashes between communities to violent conflicts of long duration and civil wars with massacres and genocides as their characteristics. It is also because there are so many different types of conflicts to be analyzed so many different types of behavior to be studied whereas there is often little information available on what is really going on. Against the background of internal conflicts which tend to be as protracted as diffuse in terms of time intensity actors and their goals this study aims to follow a specific pathway through the current thicket of violent circumstances. It focuses on causation patterns by exploring the causal role of the environmental factor in the genesis of violent conflicts occurring today and probably even more so tomorrow. This approach which for once does not focus on a specific level of the conflict system on one area in the conflict geography or on a specific category of actors analyzes causation dynamics.

Sustainable Community Development Marie Hoff, 1998-03-04 The 1990s have been marked by a wide spread awareness of the convergence of environmental economic and social problems and issues. Many local workers have begun to recognize that severe setbacks or even collapse of their local economy is strongly related to environmental problems either to the depletion of local resources such as timber fish or minerals or to severe pollution and degradation of the local ecosystem. This in depth collection of case studies of urban and rural communities committed to a process of sustainable development provides a more detailed description of this dynamic process than was previously available.
