Thomas, 1977-04-01      **Artificial Adaptive Systems in Medicine** Massimo Buscema, Enzo Grossi, 2009-11-05 New Theories and Models for New Applications This Ebook covers the emerging and most important theories underlying artificial intelligence applications in a variety of medical problems It is written for physicians researchers engineers statisticians      Artificial Adaptive Systems Using Auto Contractive Maps Paolo Massimo Buscema, Giulia Massini, Marco Breda, Weldon A. Lodwick, Francis Newman, Masoud Asadi-Zeydabadi, 2018-02-24 This book offers an introduction to artificial adaptive systems and a general model of the relationships between the data and algorithms used to analyze them It subsequently describes artificial neural networks as a subclass of artificial adaptive systems and reports on the backpropagation algorithm while also identifying an important connection between supervised and unsupervised artificial neural networks The book's primary focus is on the auto contractive map an unsupervised artificial neural network employing a fixed point method versus traditional energy minimization This is a powerful tool for understanding associating and transforming data as demonstrated in the numerous examples presented here A supervised version of the auto contracting map is also introduced as an outstanding method for recognizing digits and defects In closing the book walks the readers through the theory and examples of how the auto contracting map can be used in conjunction with another artificial neural network the spin net as a dynamic form of auto associative memory      *Girl Gangs, Biker Boys, and Real Cool Cats* Iain McIntyre, Andrew Nette, 2017-12-01 *Girl Gangs Biker Boys and Real Cool Cats* is the first comprehensive account of how the rise of postwar youth culture was depicted in mass market pulp fiction As the young created new styles in music fashion and culture pulp fiction shadowed their every move hyping and exploiting their behaviour dress and language for mass consumption and cheap thrills From the juvenile delinquent gangs of the early 1950s through the beats and hippies on to bikers skinheads and punks pulp fiction left no trend untouched With their lurid covers and wild action packed plots these books reveal as much about society's deepest desires and fears as they do about the subcultures themselves *Girl Gangs* features approximately 400 full color covers many of them never reprinted before With 70 in depth author interviews illustrated biographies and previously unpublished articles from more than 20 popular culture critics and scholars from the US UK and Australia the book goes behind the scenes to look at the authors and publishers how they worked where they drew their inspiration and often overlooked the actual words they wrote Books by well known authors such as Harlan Ellison and Lawrence Sanders are discussed alongside neglected obscurities and former bestsellers ripe for rediscovery It is a must read for anyone interested in pulp fiction lost literary history retro and subcultural style and the history of postwar youth culture Contributors include Nicolas Tredell Alwyn W Turner Mike Stax Clinton Walker Bill Osgerby David Rife J F Norris Stewart Home James Cockington Joe Blevins Brian Coffey James Doig David James Foster Matthew Asprey Gear Molly Grattan Brian Greene John Harrison David Kiersh Austin Matthews and Robert

Baker     Intelligent Data Mining in Law Enforcement Analytics Paolo Massimo Buscema, William J. Tastle, 2012-11-28 This book provides a thorough summary of the means currently available to the investigators of Artificial Intelligence for making criminal behavior both individual and collective foreseeable and for assisting their investigative capacities The volume provides chapters on the introduction of artificial intelligence and machine learning suitable for an upper level undergraduate with exposure to mathematics and some programming skill or a graduate course It also brings the latest research in Artificial Intelligence to life with its chapters on fascinating applications in the area of law enforcement though much is also being accomplished in the fields of medicine and bioengineering Individuals with a background in Artificial Intelligence will find the opening chapters to be an excellent refresher but the greatest excitement will likely be the law enforcement examples for little has been done in that area The editors have chosen to shine a bright light on law enforcement analytics utilizing artificial neural network technology to encourage other researchers to become involved in this very important and timely field of study     Drugs in Our Schools United States. Congress. House. Select Committee on Crime, 1972     *Applications of Mathematics in Models, Artificial Neural Networks and Arts* Vittorio Capecchi, Massimo Buscema, Pierluigi Contucci, Bruno D'Amore, 2010-08-03 The book shows a very original organization addressing in a non traditional way but with a systematic approach to who has an interest in using mathematics in the social sciences The book is divided in four parts a a historical part written by Vittorio Capecchi which helps us understand the changes in the relationship between mathematics and sociology by analyzing the mathematical models of Paul F Lazarsfeld the model of simulation and artificial societies models of artificial neural network and considering all the changes in scientific paradigms considered b a part coordinated by Pier Luigi Contucci on mathematical models that consider the relationship between the mathematical models that come from physics and linguistics to arrive at the study of society and those which are born within sociology and economics c a part coordinated by Massimo Buscema analyzing models of artificial neural networks d a part coordinated by Bruno D Amore which considers the relationship between mathematics and art The title of the book Mathematics and Society was chosen because the mathematical applications exposed in the book allow you to address two major issues a the general theme of technological innovation and quality of life among the essays are on display mathematical applications to the problems of combating pollution and crime applications to mathematical problems of immigration mathematical applications to the problems of medical diagnosis etc b the general theme of technical innovation and creativity for example the art and mathematics section which connects to the theme of creative cities The book is very original because it is not addressed only to those who are passionate about mathematical applications in social science but also to those who in different societies are involved in technological innovation to improve the quality of life b involved in the wider distribution of technological innovation in different areas of creativity as in the project Creative Cities Network of UNESCO     Data Mining Applications Using Artificial Adaptive Systems William J. Tastle, 2012-08-27 This volume directly

addresses the complexities involved in data mining and the development of new algorithms built on an underlying theory consisting of linear and non linear dynamics data selection filtering and analysis while including analytical projection and prediction The results derived from the analysis are then further manipulated such that a visual representation is derived with an accompanying analysis The book brings very current methods of analysis to the forefront of the discipline provides researchers and practitioners the mathematical underpinning of the algorithms and the non specialist with a visual representation such that a valid understanding of the meaning of the adaptive system can be attained with careful attention to the visual representation The book presents as a collection of documents sophisticated and meaningful methods that can be immediately understood and applied to various other disciplines of research The content is composed of chapters addressing An application of adaptive systems methodology in the field of post radiation treatment involving brain volume differences in children A new adaptive system for computer aided diagnosis of the characterization of lung nodules A new method of multi dimensional scaling with minimal loss of information A description of the semantics of point spaces with an application on the analysis of terrorist attacks in Afghanistan The description of a new family of meta classifiers A new method of optimal informational sorting A general method for the unsupervised adaptive classification for learning and the presentation of two new theories one in target diffusion and the other in twisting theory

*The Marathon Monks of Mount Hiei* John Stevens, 2021-11-30 The greatest athletes in the world today are not the Olympic champions or the stars of professional sports but the marathon monks of Japan's sacred Mount Hiei. Over a seven year training period these running buddhas figuratively circle the globe on foot. During one incredible 100 day stretch they cover 52.5 miles daily, twice the length of an Olympic marathon. And the prize they seek to capture is the greatest thing a human being can achieve: enlightenment in the here and now. This book is about these amazing men, the magic mountain on which they train, and the philosophy of Tendai Buddhism which inspires them in their quest for the supreme. The reader will learn about the monks' death-defying fasts, their vegetarian training diet, their handmade straw running shoes, and feats of endurance such as their ceremonial leap into a waterfall. Illustrated with superb photographs, the book also contains the first full-length study in English of Mount Hiei and Tendai Buddhism. John Stevens lived in Japan for thirty-five years where he was a professor of Buddhist studies at Tohoku Fukushi University in Sendai. Stevens is a widely respected translator, an ordained Buddhist priest, a curator of several major exhibitions of Zen art, and an aikido instructor. He has authored more than thirty books and is one of the foremost Western experts on aikido, holding a ranking of 7th dan Aikikai. Stevens has also studied calligraphy for decades, authoring the classic *Sacred Calligraphy of the East*. Other John Stevens titles that are likely to be of interest include *Extraordinary Zen Masters* and *The Philosophy of Aikido*. Cognition Daniel T. Willingham, 2007 This unique book helps readers understand why cognitive psychologists approach problems as they do. It explains the questions cognitive psychologists ask, gives clear answers, and provides interesting, lively, and comprehensive coverage of controversies in the field. This book is a study of cognition: how humans think. Topics covered include visual perception, attention, sensory and primary memory, memory encoding, memory retrieval, memory storage, motor control, visual imagery, decision making, and deductive reasoning, problem solving, and language. For readers that are interested in understanding the mysteries of cognition, including psychiatrists, psychologists, psychoanalysts, and those in the field of cognitive neuroscience.
