High Tide The Truth About Our Climate Crisis:

High Tide Mark Lynas, 2004-06 Reveals the first evidence collected during a three year journey across five continents about how global warming is affecting people's lives The Anthropology of Climate Change Hans Baer, Merrill Singer, 2014-04-24 In addressing the urgent questions raised by climate change this book provides a comprehensive overview of the anthropology of climate change guided by a critical political ecological framework It argues that anthropologists must significantly expand their focus on climate change and their contributions to responding to climate change as a grave risk to humanity The book presents a human socioecological framework for conceptualizing climate change It examines the emergence and slow maturation of the anthropology of climate change reviews the historic foundations for this work in the archaeology of climate change and presents three alternative contemporary theoretical perspectives in the anthropology of climate change The book synthesizes anthropological work and perspectives on climate change in the form of case studies in various regions of the world revealing the nature of global climate change as constituting multiple and somewhat diverse changes in local settings It explores the applied anthropology of climate change in terms of the ways anthropologists are contributing to climate policy working with communities on climate change issues as well as within the climate movement both internationally and nationally Finally it provides an overview of what other the social sciences are saying about climate change and explores ways that the anthropology of climate change can interface with sociology political science and human geography in order to create an integrated social science of climate change This book gives researchers and students in Environmental Anthropology Climate Change Human Geography and Sociology a novel framework for understanding climate change that emphasizes human socioecological interactions **The Anthropology of Climate Change** Hans A. Baer, Merrill Singer, 2018-04-19 In addressing the urgent questions raised by climate change this book provides a comprehensive overview of the anthropology of climate change guided by a critical political ecological framework It examines the emergence and slow maturation of the anthropology of climate change reviews the historic foundations for this work in the archaeology of climate change and presents three alternative contemporary theoretical perspectives in the anthropology of climate change This second edition is fully updated to include the most recent literature published since the first edition in 2014 It also examines a number of new topics including an analysis of the 2014 American Anthropological Association's Global Climate Change Task Force report a new case study on responses to climate change in developed societies and reference to the stance of the Trump administration on climate change Not only does this book provide a valuable overview of the field and the key literature but it also gives researchers and students in Environmental Anthropology Climate Change Human Geography Sociology and Political Science a novel framework for understanding climate change that emphasizes human socioecological interactions **Getting the Climate Science Facts Right** Medani P. Intergovernmental Panel on Climate Change IPCC Addressing climate change is the most important public priority of the 21st Century Unlike many issues however this issue is being driven by both science and its interface with politics The main institution for bridging this division between science and international politics is the IPCC As such it is the main source of the facts from which climate change policy is developed This book describes the ways in which the IPCC arrives at these facts and so can be sure they are complete and evidence based Seldom in history has science had such a direct relationship with politics The negotiation of an international policy regime requires at its outset an agreement on the facts In this case the facts are scientific complex and contentious Governments have recognized this and have by using the IPCC set up institutional machinery to provide facts from a source and in a manner that they can accept The way in which the IPCC functions is unique in that it melds the way in which science achieves consensus with the way governments do at the international level Starting with a process to examine review and debate scientific findings leading to a consensus about scientific fact usually expressed as probabilities that the findings will hold over time the IPCC then concludes by using the kind of consensus development mechanism that the United Nations typically uses to achieve agreements leading to the formation of policy regimes The book examines the structure of the IPCC its composition and its procedures in order to achieve an understanding of its role and future

Climate Change Revised Edition Shelley Tanaka, 2012-03-01 Revised and updated edition Scientists have been warning the world about global warming for almost three decades But the rest of us are only now starting to get the message The planet is warming at an unusually rapid rate and this warming is largely being caused by human activity Shrinking glaciers thawing permafrost erratic weather and threatened freshwater supplies are already affecting the lives of people around the globe and the worst is yet to come The crisis is real but there is little consensus about how to confront the problem not only because the science is complex but because the economic political and social implications of taking action are vast far reaching and unsettling And despite the urgency climate change deniers seem to be more vocal than ever This revised and updated edition includes the most recent scientific findings while addressing the main issues What is happening and how did we get here What is the basic science behind climate change What is going to happen in the future And most important why is it so hard for us to accept what is going on and what can we do about it Charts maps a glossary an index and suggestions for further reading accompany the text

combines entries describing Earth's variable climatic history, references to scientific literature, weather record data, and selected primary documents to present readers with a comprehensive account of global warming's effects worldwide. By examining verifiable quantitative information such as the frequency and intensity of hurricanes and changes in the hydrological cycle, as well as clear patterns and trends of alternating droughts and deluges and wildfires melting ice and rising seas, readers will be able to understand why scientists are so concerned about the future of our climate. Researchers will benefit from detailed explanations of scientific topics such as thermal inertia, feedbacks, and tipping points, and receive invaluable context on the role of energy use in climate change, including automobiles and air travel. Readers will learn about the role of China in the current global climate and in the future, the widespread effects of climate change on agriculture, and how indigenous peoples' lives are being impacted, from drought and the Navajos to hunters' lives in the Arctic. The work concludes with thought-provoking debates regarding potential solutions, from wind power and solar power to geo-engineering.

A Hot Mess Jeff Fleischer, 2021-11-02 We already know what climate change is, and many of us understand the human causes. But what will climate change do to our world? Who will be affected? Spoiler: all of us, and how our lives change in the future. Topics include sea levels, extreme weather, drought, animal and plant extinction, and human and animal migration. Drawing on real-life situations and stories, journalist Jeff Fleischer takes an informed, approachable look at how our world will likely change as a result of our actions, including suggestions on what we can still do to slow down these unprecedented effects.

Systemic Racism Ruth Thompson-Miller, Kimberley Ducey, 2017-10-17 This volume identifies some of the remaining gaps in extant theories of systemic racism, and in doing so, illuminates paths forward. The contributors explore topics such as the enduring hyper-criminalization of blackness, the application of the white racial frame, and important counterframes developed by people of color. They also assess how African Americans and other Americans of color understand the challenges they face in white-dominated environments. Additionally, the book includes analyses of digitally constructed blackness on social media, as well as case studies of systemic racism within and beyond U.S. borders. This research is presented in honor of Kimberley Ducey's and Ruth Thompson-Miller's teacher, mentor, and friend Joe R. Feagin.
