Moenius, 2009-03-12 Compounds labeled with carbon 14 and tritium are indispensable tools for research in biomedical sciences discovery and development of pharmaceuticals and agrochemicals Preparation of Compounds Labeled with Tritium and Carbon 14 is a comprehensive authoritative and up to date discussion of the strategies synthetic approaches reactions techniques and resources for the preparation of compounds labeled with either of these isotopes A large number of examples are presented for the use of isotopic sources and building blocks in the preparation of labeled target compounds illustrating the range of possibilities for embedding isotopic labels in selected moieties of complex structures Topics include Formulation of synthetic strategies for preparing labeled compounds Isotope exchange methods and synthetic alternatives for preparing tritiated compounds In depth discussion of carbon 14 building blocks and their utility in synthesis Preparation of enantiomerically pure isotopically labeled compounds Applications of biotransformations Preparation of Compounds Labeled with Tritium and Carbon 14 is an essential guide to the specialist strategies and tactics used by chemists to prepare compounds tagged with theradioactive atoms carbon 14 and tritium

**Bretherick's Handbook of Reactive Chemical Hazards** Peter Urben, 2013-10-22 Bretherick's Handbook of Reactive Chemical Hazards is an assembly of all reported risks such as explosion fire toxic or high energy events that result from chemical reactions gone astray with extensive referencing to the primary literature It is designed to improve safety in laboratories that perform chemical synthesis and general research as well as chemical manufacturing plants Entries are ordered by empirical formula and indexed under both name s and Chemical Abstracts Registry Numbers This two volume compendium focuses on reactivity risks of chemicals alone and in combination toxicity hazards are only included for unexpected reactions giving volatile poisons Predict avoid and control reactivity danger with this latest edition of the leading guide Covers every chemical with documented information on reactive hazards more than 5 000 entries on single elements or compounds and 5 000 entries on the interactions between two or more compounds Includes five years of new reports new references to the primary literature and amplification to existing entries Links similar compounds or incidents that are not obviously related

**Ionic Polymerizations and Related Processes** Judit E. Puskas, Armin Michel, Shahzad Barghi, 2012-12-06 In Ionic Polymerization and Related Processes internationally recognised academic and industrial researchers discuss and debate the latest developments in the field The major focus is on cationic polymerizations but related anionic and controlled radical processes are also discussed

**New Methods for Polymer Synthesis** W.J. Mijs, 2013-06-29 The art and science of macromolecular architecture is based on synthesis analysis processing and evaluation of physical properties of polymers The growing specificity of available synthetic methods and the increasing refinement of analytical and physical analysis are gradually providing a deeper insight into structure property relationships of polymers upon which many applications can be based This book deals with recent methods for polymer synthesis Those that lead to specific structures have been selected especially Background mechanism

scope and limitations and illustrative procedures are given for each method With this layout the editor hopes that the book will provide a practical guideline for the synthetic polymer chemist in industry or at a university graduate school on how to apply the methods in the design of new polymer structures The editor is grateful to the authors not only for their contributions containing interesting new developments in polymer synthesis but also for the way they have fitted their text into the general framework of the book The elegant chemistry described in the following chapters will it is hoped inspire more organic chemists to apply their skills to polymer synthesis where the beauty of organic chemistry in terms of structural control and reactivity may be even more apparent than in the low molecular field
