Feeling Salty About Road Salt

Road salt is a widely used product for removing ice from sidewalks and roads. It is a simple, readily available product that keeps cars and pedestrians safe. Despite these benefits, road salt has many unintended consequences for the environment and infrastructure. This report will explore the signs of road salt and the harmful consequences of its use.

Road salt is a widely used product for removing ice from sidewalks and roads.

Road salt can originate from two sources. The first source is from deep underground mines. The second source relies on extracting salt from seawater. This method uses large evaporators to remove the water component of seawater, leaving the salt behind. The most common form of road salt is sodium chloride, which is the same type of salt used for table salt to season food.

Despite its widespread use, there are many concerns of the overuse of road salt. The primary concern is its impact on the environment. Salt is found naturally in soil, but too much salt can be very damaging. Plants absorb salt through their roots. This salt builds up inside them and eventually becomes toxic. Salt in the soil can also absorb water. This reduces the

water available for plants. This can lead to stunted plant growth, or it can kill plants entirely.

Road salt has also been linked to water contamination. Freshwater bodies, groundwater, and which houses aquatic life and aquatic ecosystems. Salt can affect the temperature of which is busy of water freezes, and it can impact the rate that water evaporates. It can also affect the oxygen content and have many negative effects on plants and animals. All of these factors have the potential to harm the sensitive ecological balance within aquatic environments.

Road salt is also responsible for the corrosion of infrastructure.
