**The Foundations of Modern Science in the Middle Ages** Edward Grant, 1996-10-28 Contrary to prevailing opinion the roots of modern science were planted in the ancient and medieval worlds long before the Scientific Revolution of the seventeenth century Indeed that revolution would have been inconceivable without the cumulative antecedent efforts of three great civilisations Greek Islamic and Latin With the scientific riches it derived by translation from Greco Islamic sources in the twelfth and thirteenth centuries the Christian Latin civilisation of Western Europe began the last leg of the intellectual journey that culminated in a scientific revolution that transformed the world The factors that produced this unique achievement are found in the way Christianity developed in the West and in the invention of the university in 1200 As this 1997 study shows it is no mere coincidence that the origins of modern science and the modern university occurred simultaneously in Western Europe during the late Middle Ages

European history describing What People Think Happened and What Really Happened and illustrating both trends with primary source documents The book demonstrates that historical fictions also have a history and that while we need to replace those fictions with facts about the medieval past we can also benefit from understanding how a fiction about the Middle Ages developed and what that says about our modern perspectives on the past Through this innovative presentation readers are introduced to a wide range of sources from Roman imperial perspectives on the Fall of Rome to songs of chivalry and chronicles of the Crusades scientific treatises on the shape of the Earth and the creation of the universe and early modern stories and textbooks that developed or perpetuated historical myths

Bakos, 2011-01-01 *On Faith, Rationality and the Other in the Late Middle Ages* is an investigation of Nicholas of Cusa that seeks a deeper understanding of this important medieval intellectual and his importance for us today. One of Gergely Bakos's primary aims in this study is to understand Nicholas of Cusa's important and underexamined dimensions of his approach to dialogue with Islam. The framework and the methodology that informs this investigation was inspired by the late Professor Jos Decorte, 1954-2001, a Flemish philosopher and mediaevalist at the Catholic University of Leuven in Belgium. Bakos carefully exposits his method of approaching medieval thought. Part One and then applies and tests this method in practice. Part Two. The most extensive part of this study offers a sketch of the historical background of Nicholas's dialogue with Islam and investigates what possibilities this approach offers. All of this is placed in dialogue with two other mediaeval approaches to Islam: Thomas Aquinas and Ramon Llull. The final chapters discuss Nicholas of Cusa's project from a perspective offered by his mystical theology. The book culminates in an exploration of the possibilities of Nicholas of Cusa's approach by testing the framework of the study. Finally, the author evaluates the application of his own approach. Part Three. The study ultimately has two purposes: to contribute to a better understanding of Nicholas of Cusa's thought on the one hand and on the other to test a particular methodology and interpretative framework for the understanding of mediaeval culture. Nature in the Middle

Ages and the Early Modern Times Albrecht Classen, 2024-07-01 The study of pre-modern anthropology requires the close examination of the relationship between nature and human society, which has been both precarious and threatening as well

as productive soothing inviting and pleasurable Much depends on the specific circumstances as the works by philosophers theologians poets artists and medical practitioners have regularly demonstrated It would not be good enough as previous scholarship has commonly done to examine simply what the various writers or artists had to say about nature While modern scientists consider just the hard core data of the objective world cultural historians and literary scholars endeavor to comprehend the deeper meaning of the concept of nature presented by countless writers and artists Only when we have a good grasp of the interactions between people and their natural environment are we in a position to identify and interpret mental structures social and economic relationships medical and scientific concepts of human health and the messages about all existence as depicted in major art works In light of the current conditions threatening to bring upon us a global crisis it matters centrally to take into consideration pre modern discourses on nature and its enormous powers to understand the topoi and tropes determining the concepts through which we perceive nature Nature thus proves to be a force far beyond all human comprehensibility being both material and spiritual depending on our critical approaches

**A Critical History of Psychology** Thomas Hardy Leahey, 2025-05-27 This fully updated and refreshed 9th edition places social economic and political forces of change alongside psychology's internal theoretical and empirical arguments It utilizes a critical lens to illuminate the way in which the external world has shaped the development of psychology and in turn how psychology from antiquity to modernity has shaped society The text approaches the material from an integrative rather than wholly linear perspective carefully examining how issues in psychology reflect and affect concepts that lie outside the field of psychology's technical concerns as a science and profession Key features of this edition

include A newly reconsidered structure including five additional interludes exploring historical background narratives and the rise of modernity to allow for flexible and adaptable textbook use Expanded exploration of the two psychologies the Way of Ideas driven by epistemology and unique to Europe and The Way of Human Nature a universal concern to find a science of human behavior and its management Including scientific applied and professional psychology as well as coverage of the social sciences and social policy implications this book is appropriate for high level undergraduate and graduate students

**Questions on Aristotle's Categories** John Duns Scotus, 2014 This work is the first English translation of Scotus's commentary on Aristotle's Quaestiones super Praedicamenta Although there are numerous Latin commentaries on Aristotle's Categories Scotus's Questions is one of the few commentaries on the Categories written in the thirteenth century covering all of Aristotle's text including the often neglected post praedicamenta and the only complete Latin commentary available in English Moreover unlike many of the commentaries Scotus's text is one of the last commentaries to be written before the nominalist reduction of the categories to substance and quality The question format allows Scotus a great deal of liberty to discuss the categories in detail as well as matters that are only remotely raised by the text Altogether the forty four questions cover the following subjects questions 1 4 are prolegomena to the work itself and raise the question of its subject matter as well as whether there can be a science of the categories questions 5 8 deal with equivocals univocals and denominatives questions 9 11 discuss Aristotle's two rules regarding predication and the sufficiency of the categories questions 12 36 discuss the four main categories treated by Aristotle namely substance quantity relation and quality and the remaining eight questions discuss the post praedicamenta *Signature in the Cell* Stephen C.

Prologue **An Oxford Companion to the Romantic Age**, 1999 The Intellectual Life of Western Europe in the Middle

Ages Dales, 2022-04-19 This work presents a connected account of western European thought from the Patristic age to the mid fourteenth century Dales aims to keep his reader close to the sense of the texts which he translates frequently at some length or summarizes in his exposition He attempts to include important matters which are generally omitted in broad treatments the chapter on the tenth century is the longest in the book but the author's choice of topics is fully justified by his special intimacy with what he elects to discuss particularly the hexameral tradition ancient and medieval the scientific tradition twelfth century treatises on nature and cosmology discussions of the eternity of the world and the thought of Robert Grosseteste This adds a personal and distinctive character to the work Dales stresses throughout the diversity and vigor of

medieval thought qualities which he illustrates widely from Latin and vernacular poetry and literature of various kinds as well as from philosophical and theological texts
