Polymer Characterisation B.J. Hunt,M.I. James,2012-12-06

Polymers continue to play an ever increasing role in the modern world In fact it is quite inconceivable to most people that we could ever have existed of the increased volume and variety of materials without them As a result currently available and the diversity of their application characterisation has become an essential requirement of industrial and academic laboratories involved with polymeric materials On the one hand requirements may come from polymer specialists involved in the design and synthesis of new materials who require a detailed understanding of the relationship between the precise molecular architecture and the properties of the polymer in order to improve its capabilities and range of applications On the other hand many analysts who are not polymer specialists are faced with the problems of analysing and testing a wide range of polymeric materials for quality control or material specification purposes We hope this book will be a useful reference for all scientists and techno or industrial laboratories logists involved with polymers whether in academic and irrespective of their scientific discipline We have attempted to include in one volume all of the most important techniques Obviously it is not possible to do this in any great depth but we have encouraged the use of specific examples to illustrate the range of possibilities In addition numerous references are given to more detailed texts on specific subjects to direct the reader where appropriate The book is divided into II chapters

Modern Methods of Polymer Characterization Howard G.

Barth,Jimmy W. Mays,1991-09-03 Presents the methods used for characterization of polymers In addition to theory and basic principles the instrumentation and apparatus necessary for methods used to study the kinetic and thermodynamic interactions of a polymer with its environment are covered in detail Some of the methods examined include polymer separations and characterization by size exclusion and high performance chromatography inverse gas chromatography osmometry viscometry ultracentrifugation light scattering and spectroscopy

Nuclear Magnetic Resonance in Modern

Technology G.E. Maciel, 2012-12-06 This volume represents the primary lectures of the NATO Advanced Study Institute ASI on Nuclear Magnetic Resonance in Modern Technology which was held at Sarigerme Park near the Dalaman Airport on the southern Aegean shore of Turkey from August 23 to September 4 1992 As indicated in the title this ASI was aimed at examining displaying and perhaps influencing the role of nuclear magnetic resonance NMR in modern technological activity The lectures summarized in this volume and the numerous short contributed talks and posters were primarily aimed at the question What is NMR doing in support of modern technology During the main discussion periods and the numerous small scheduled meetings of specific interest groups this same topic was also addressed along with questions like What could or should NMR be doing in support of modern technology With this kind of subject orientation the organizers attempted to include a large participation at the ASI from scientists and engineers from diverse private industries in which NMR does or perhaps should play a substantial role in supporting or optimizing technology Perhaps because of a combination of worldwide industrial contractions and residual corporate nervousness regarding the then recent Gulf War which caused a one year postponement of this ASI the participation from private industry was numerically disappointing We hope that this book will serve to bring the role of NMR in modern industry to the attention of numerous industrial scientists and engineers who were unable to attend the AS
