**Sound** Rebecca Olien, 2003-09 Introduces sound and hearing and provides instructions for an activity to demonstrate some of their characteristics Light and Sound Richard Spilsbury, Louise Spilsbury, 2014 Explores the principles of light and sound and how they work Sound Ruth Owen, 2025-01-01 Without sound there would be no chatting laughing bird song or listening to music But what exactly is sound and how do our ears and brain ensure that we get to enjoy it In this fascinating title the subject of sound is carefully explained in an accessible way with lots of diagrams and activities that help readers understand the science behind this topic What are sound waves What makes sounds louder and quieter What are decibels Why are some sounds high pitched and others low pitched And how do sounds travel differently through the air through water and through solids Discover how the different external and internal parts of our ears capture sound waves and working in partnership with our brains turn them into sounds Learn how animals such as cats bats and dolphins use sounds that humans cannot hear to hunt Understand how some people have hearing loss and how equipment can be used to help them hear And meet two incredible professional musicians who make music even though they are both profoundly deaf Sounds Wild and Broken David George Haskell, 2023-03-07 Finalist for the 2023 Pulitzer Prize in General Nonfiction and the 2023 PEN E O Wilson Literary Science Writing Award Winner of the Acoustical Society of America's 2023 Science Communication Award A glorious guide to the miracle of life's sound The New York Times Book Review A lyrical exploration of the diverse sounds of our planet the creative processes that produced these marvels and the perils that sonic diversity now faces We live on a planet alive with song music and speech David Haskell explores how these wonders came to be In rain forests shimmering with insect sound and swamps pulsing with frog calls we learn about evolution's creative powers From birds in the Rocky Mountains and on the streets of Paris we discover how animals learn their songs and adapt to new environments Below the waves we hear our kinship to beings as different as snapping shrimp toadfish and whales In the startlingly divergent sonic vibes of the animals of different continents we experience the legacies of plate tectonics the deep history of animal groups and their movements around the

world and the quirks of aesthetic evolution Starting with the origins of animal song and traversing the whole arc of Earth history Haskell illuminates and celebrates the emergence of the varied sounds of our world In mammoth ivory flutes from Paleolithic caves violins in modern concert halls and electronic music in earbuds we learn that human music and language belong within this story of ecology and evolution Yet we are also destroyers now silencing or smothering many of the sounds of the living Earth Haskell takes us to threatened forests noise filled oceans and loud city streets and shows that sonic crises are not mere losses of sensory ornament Sound is a generative force and so the erasure of sonic diversity makes the world less creative just and beautiful The appreciation of the beauty and brokenness of sound is therefore an important guide in today s convulsions and crises of change and inequity Sounds Wild and Broken is an invitation to listen wonder belong and act
