Environmental Science in Perspective Thomas G. Spiro, William M. Stigliani, 1980-01-01 This book requiring little background in science examines environmental concerns in four broad areas: energy, the atmosphere, the hydrosphere, and the biosphere. The authors provide scientific insight into such issues as dwindling natural gas and petroleum resources, fission and fusion as energy sources, CO₂ build up and the greenhouse effect, automobile emission control, acid rain, toxic waste disposal, lead, mercury, and cadmium poisoning, and environmental links to cancer. The book presents both sides of these controversial issues in view of the science and technology involved. It provides the reader with a balanced understanding of today's environmental debates. Problem sets are included and an answer manual is available. **Environmental Issues in Chemical Perspective** Thomas G. Spiro, William M. Stigliani, 1980-06-30 An in-depth presentation of the chemistry required to evaluate the choices we must make regarding our environment. This study has four parts: energy, the atmosphere, the hydrosphere, and the biosphere. Each part is followed by problem sets that require the application of chemical principles to such issues as dwindling natural gas and petroleum resources, fission and fusion as energy sources, CO₂ build up and the

greenhouse effect automobile emission control acid rain eutrophication of lakes lead mercury and cadmium poisoning and environmental links to cancer An answer manual for the problems is included Social political and economic concerns are also covered The authors show how chemists and non chemist decision makers can take account of each other s perspectives
