*The Paleobiological Revolution* David Sepkoski, Michael Ruse, 2015-03-04 The Paleobiological Revolution chronicles the incredible ascendance of the once maligned science of paleontology to the vanguard of a field With the establishment of the modern synthesis in the 1940s and the pioneering work of George Gaylord Simpson Ernst Mayr and Theodosius Dobzhansky as well as the subsequent efforts of Stephen Jay Gould David Raup and James Valentine paleontology became embedded in biology and emerged as paleobiology a first rate discipline central to evolutionary studies Pairing contributions from some of the leading actors of the transformation with overviews from historians and philosophers of science the essays here capture the excitement of the seismic changes in the discipline In so doing David Sepkoski and Michael Ruse harness the energy of the past to call for further study of the conceptual development of modern paleobiology

**Cretaceous Project 200, Volume 2: Regional Studies** M.B. Hart, S.J. Batenburg, B.T. Huber, G.D. Price, N. Thibault, M. Wagreich, I. Walaszczyk, 2025-04-02 The Cretaceous was first mentioned in the legend of a geological map largely centred on France published in 1822 by Jean Baptiste Julien d Omalius d Halloy Two hundred years of research have demonstrated that the Cretaceous records some of the highest sea levels atmospheric temperatures and extreme events in Earth history It was also a time of significant palaeogeographical changes and continental fragmentation This volume draws together a collection of papers from an exceptionally wide geographical area that reflects the varied geological features of Cretaceous strata and the enclosed faunas and floras There are geological accounts of areas from the Arctic to the Antarctic Peninsula onshore and offshore environments as well as some terrestrial environments with newly described floras and faunas The application of stable isotope geochemistry to stratigraphical problems and the identification of cyclostratigraphy features quite prominently in many of the areas described

Echinoderm Paleobiology William I. Ausich, Gary D. Webster, 2008-07-18 The dominant faunal elements in shallow Paleozoic oceans echinoderms are important to understanding these marine ecosystems Echinoderms which include such animals as sea stars crinoids or sea lilies sea urchins sand dollars and sea cucumbers have left a rich and for science extremely useful fossil record For various reasons they provide the ideal source for answers to the questions that will help us develop a more complete understanding of global environmental and biodiversity changes This volume highlights the modern study of fossil echinoderms and is organized into five parts echinoderm paleoecology functional morphology and paleoecology evolutionary paleoecology morphology for refined phylogenetic studies innovative applications of data encoded in echinoderms and information on new crinoid data sets

**A Global Synthesis of the Ordovician System: Part 1** D.A.T. Harper, B. Lefebvre, I. G. Percival, T. Servais, 2023-06-07 The Ordovician was one of the longest of the geological periods characterized by major magmatic and tectonic activity an immense biodiversification swings in climate and sea levels and the first Phanerozoic mass extinction A Global Synthesis of the Ordovician System is presented in two volumes in The Geological Society Special Publications This first volume SP532 charts the history of the Ordovician System and explores significant advances in our understanding of its biostratigraphy including more precise calibration of its timescale with tephra chronology and regional alignments using astrochronology and cyclostratigraphy Changes in the world's oceans their shifting currents and sea levels the biogeography of their biotas and the ambient climate are described and discussed against a background of changing palaeogeography This first volume also includes syntheses of the Ordovician geology for most European countries including historical key areas such as Great Britain Baltoscandia and Bohemia The second volume SP533 provides synthetic aspects of the Ordovician geology of most other parts of the world

*Studies on Mexican Paleontology* Francisco J. Vega, Torrey G. Nyborg, María del Carmen Perrilliat, Marisol Montellano-Ballesteros, Sergio R.S. Cevallos-Ferriz, Sara A. Quiroz-Barroso, 2006-07-15 During the last few years the number of contributions to the Paleontology of Mexico has increased considerably Paleontological work in Mexico has been focused on providing important information for petroleum exploration and specific studies dealing with pollen foraminifera radiolaria dinoflagellates rudists and ammonites Often these reports were published only in local or regional journals and therefore not available to the scientific community at large The purpose of this book is to offer an updated review of the fossil groups from Mexico providing their significance to the stratigraphy tectonics sedimentology evolution and paleontology of Mexico whose study has proved to be

relevant in stratigraphy tectonics sedimentology and evolution The fossil record of Mexico ranges from Precambrian to Pleistocene Almost every Mexican State has reported fossil localities with ongoing studies and potential for the discovery of new localities Even those localities that have been studied since the eighteen century such as the early Cretaceous San Juan Raya have recently reported new fossil groups Unfortunately much of the fossil reports from Mexico have been published in Spanish from local journals which represent a language barrier to the international community There is little doubt that the paleontological history of Mexico deserves to be known in other countries By making this book available to the international scientific community we hope that interest in the fossil record of Mexico will grow New Perspectives on Horned

Dinosaurs Michael J. Ryan, Brenda J. Chinnery-Allgeier, David A. Eberth, 2010-06-22 Easily distinguished by the horns and frills on their skulls ceratopsians were one of the most successful of all dinosaurs This volume presents a broad range of cutting edge research on the functional biology behavior systematics paleoecology and paleogeography of the horned dinosaurs and includes descriptions of newly identified species Applied Stratigraphy Eduardo A.M.

Koutsoukos, 2007-08-16 Stratigraphy has come to be indispensable to nearly all branches of the earth sciences assisting such endeavors as charting the course of evolution understanding ancient ecosystems and furnishing data pivotal to finding strategic mineral resources This book focuses on traditional and innovative stratigraphy techniques and how these can be used to reconstruct the geological history of sedimentary basins and in solving manifold geological problems and phenomena

**Paleopalynology** Alfred Traverse, 2007-05-21 This book provides complete coverage of all aspects of the study of all fossil palynomorphs yet studied It is a profusely illustrated treatment The book serves both as a student text and general reference work Palynomorphs yield information about age geological and biological environment climate during deposition and other significant factors about the enclosing rocks Extant spores and pollen are treated first preparing the student for more difficult work with fossil sporomorphs and other kinds of palynomorphs An appendix describes laboratory methods The glossary bibliographies and index are useful tools for study of the literature Application of High-resolution Quantitative

Macroevolution in Deep Time Rituparna Bose, Alexander J. Bartholomew, 2013-01-26 The prerequisite to investigating the underlying causes behind mass extinction is a profound understanding of the evolutionary history of both living and dead species It is especially important to appreciate the significance of such studies in extinct organisms especially in organisms that were abundant in a certain geologic era but have subsequently dwindled or become extinct Such studies should help to accurately evaluate patterns of evolution in extinct species lineages and help predict the same in its modern analogs The book includes cutting edge research in evolutionary biology that should serve as a starting point for conservation **A**

**Geologic Time Scale 2004** Felix M. Gradstein, James George Ogg, Alan Gilbert Smith, 2004 An international team of over forty stratigraphic experts have helped to build the most up to date international stratigraphic framework for the

Precambrian and Phanerozoic This successor to A Geologic Time Scale 1989 by W Brian Harland et al CUP 0521 387655 begins with an introduction to the theory and methodology behind the construction of the new time scale The main part of the book is devoted to the scale itself systematically presenting the standard subdivisions at all levels using a variety of correlation markers Extensive use is made of isotope geochronology geomathematics and orbital tuning to produce a standard geologic scale of unprecedented detail and accuracy with a full error analysis A wallchart summarising the whole time scale with paleogeographic reconstructions throughout the Phanerozoic is included in the back of the book The time scale will be an invaluable reference source for academic and professional researchers and students      **Proceedings of the Estonian Academy of Sciences, Geology** ,2006-06      **The Geology of Stratigraphic Sequences** Andrew D. Miall,2010-06-09 It has been more than a decade since the appearance of the First Edition of this book Much progress has been made but some controversies remain The original ideas of Sloss and of Vail building on the early work of Blackwelder Grabau Ulrich Levorsen and others that the stratigraphic record could be subdivided into sequences and that these sequences store essential information about basin forming and subsidence processes remains as powerful an idea as when it was first formulated The definition and mapping of sequences has become a standard part of the basin analysis process The main purpose of this book remains the same as it was for the first edition that is to situate sequences within the broader context of geological processes and to answer the question why do sequences form Geoscientists might thereby be better equipped to extract the maximum information from the record of sequences in a given basin or region Tectonic climatic and other mechanisms are the generating mechanisms for sequences ranging over a wide range of times scales from hundreds of millions of years to the high frequency sequences formed by cyclic processes lasting a few tens of thousands of years
