Watershed Models Vijay P. Singh, Donald K. Frevert, 2010-09-28 Watershed modeling is at the heart of modern hydrology supplying rich information that is vital to addressing resource planning environmental and social problems Even in light of this important role many books relegate the subject to a single chapter while books devoted to modeling focus only on a specific area of application Recognizing the

Numerical Modeling in Open Channel Hydraulics Romuald Szymkiewicz, 2010-03-10 Open channel hydraulics has always been a very interesting domain of scientific and engineering activity because of the great importance of water for human living The free surface flow which takes place in the oceans seas and rivers can be still regarded as one of the most complex physical processes in the environment The first source of difficulties is the proper recognition of physical flow processes and their mathematical description The second one is related to the solution of the derived equations The equations arising in hydrodynamics are rather complicated and except some much idealized cases their solution requires application of the numerical methods For this reason the great progress in open channel flow modeling that took place during last 40 years paralleled the progress in computer technique informatics and numerical methods It is well known that even today

cal hydraulic engineering problems need applications of computer codes Thus we witness a rapid development of ready made packages which are widely disseminated and offered for engineers However it seems necessary for their users to be familiar with some fundamentals of numerical methods and computational techniques applied for solving the problems of interest This is helpful for many reasons The ready made packages can be effectively and safely applied on condition that the users know their possibilities and limitations For instance such knowledge is indispensable to distinguish in the obtained solutions the effects coming from the considered physical processes and those caused by numerical artifacts
