Ferronsky, 2016-04-25 This work discusses the problem of physical meaning of the three main dynamical properties of matter motion namely gravitation inertia and weightlessness It considers that Newtonian gravitation and Galileo s inertia are the centrifugal effects of interaction energy of a self gravitating n body system and its potential field A self gravitating celestial body appears to be an excellent natural centrifuge that is rotated by the energy of interacting elementary particles Weightlessness is a consequence of the centrifugal effect of elementary particles interaction that appears at differentiation of a body matter with respect to density The author analyzes the problem of creation of mass particles and elements from the elementary particles of dark matter and discusses the basic physics of the Jacobi dynamics from the viewpoint of quantum gravitation Chapters assert that the fundamentals of Jacobi dynamics completely correspond to conditions of natural centrifuges The centrifuge is an excellent experimental model for the study of dynamical effects in solving the many body problem In this book readers may follow the demonstration of some of those studies and follow derivations solutions and conclusions that provide a solid basis for further research in celestial mechanics geophysics astrophysics geo and planetary sciences Theory and Experiment in Gravitational Physics Clifford M. Will, 1993-03-11 This is a revised edition of a classic and highly regarded book first published in 1981 describing the status of theory and experiment in general relativity. The book provides all the necessary theoretical background and covers all the important experimental tests A new chapter has been added to cover recent important experimental tests and the bibliography has been brought right up to date Reviews of the previous edition consolidates much of the literature on experimental gravity and should be invaluable to researchers in gravitation Science a concise and meaty book and a most useful reference work researchers and serious students of gravitation should be pleased with it Nature Radiation Theory of Gravitation and Structure of Matter Jaromír Hrbek, 1978 Discussion of "A Kinetic Theory of Gravitation."
