Kinetics Of Coal Gasification:

Kinetics of Coal Gasification James L. Johnson, 1979-12-20 Provides the best description of coal gasification reactions available today presenting a series of publications by the late James Lee Johnson that trace his work on the development of coal gasification kinetics Puts gasification kinetics into perspective for reactor design by discussing gasification thermodynamics fluidized beds and the physical characteristics of coals and coal chars for estimating this gasification reactivity An outstanding reference based on a chapter contributed by Dr Johnson to CHEMISTRY OF COAL UTILIZATION SUPPLEMENTARY VOLUME 2 edited by Martin A Elliot Kinetics of Coal Gasification James Lee Johnson, 1979 Coal Gasification and Its Applications David A. Bell, Brian F. Towler, Maohong Fan, 2010-12-08 Skyrocketing energy costs have spurred renewed interest in coal gasification Currently available information on this subject needs to be updated however and focused on specific coals and end products For example carbon capture and sequestration previously given little attention now has a prominent role in coal conversion processes This book approaches coal gasification and related technologies from a process engineering point of view with topics chosen to aid the process engineer who is interested in a complete coal to products system It provides a perspective for engineers and scientists who analyze and improve components of coal conversion processes The first topic describes the nature and availability of coal Next the fundamentals of gasification are described followed by a description of gasification technologies and gas cleaning processes The conversion of syngas to electricity fuels and chemicals is then discussed Finally process economics are covered Emphasis is given to the selection of gasification technology based on the type of coal fed to the gasifier and desired end product E g lower temperature gasifiers produce substantial quantities of methane which is undesirable in an ammonia synthesis feed This book also reviews gasification kinetics which is informed by recent papers and process design studies by the US Department of Energy and other groups and also largely ignored by other gasification books Approaches coal gasification and related technologies from a process engineering point of view providing a perspective for engineers and scientists who analyze and improve components of coal conversion processes Describes the fundamentals of gasification gasification technologies and gas cleaning processes Emphasizes the importance of the coal types fed to the gasifier and desired end products Covers gasification kinetics which was largely ignored by other gasification books Provides a perspective for engineers and scientists who analyze and improve components of the coal conversion processes Describes the fundamentals of gasification gasification technologies and gas cleaning processes Covers gasification kinetics which was largely ignored by other gasification books **Kinetics of Coal Gasification at High Pressure** Terence William Albert Rampling, 1983 Mathematical Modeling in the Kinetics of Coal Gasification Ping-Fu Cheng, 1976 Kinetics of Coal Gasification in a Low Pressure, Low Residence Time, Entrained Flow Reactor Chiang-liu Chen, 1973 **Kinetics of coal gasification reactions at process conditions** , 1984 *Energy Research Abstracts* , 1993 Semiannual with semiannual and annual indexes

Heterogeneous Kinetics of Coal Gasification. Quarterly Technical Progress Report, 1 May 1982-31 July 1982. [Equipment Design]., 1982 During the reporting period significant progress was made on two fronts 1 the steam addition system for transient steam char kinetic experiments and 2 the automated data acquisition system for rapid mass programming control of the mass spectrometer and data logging Steam Addition System Although it is a relatively straightforward matter to produce steam for the reactor we found that it is quite a challenge to develop a system capable of maintaining a steady and accurately known flow rate of steam argon mixtures at high pressure and temperature in alternate flow circuits i e the reactor and purge lines while simultaneously protecting downstream valving and instrumentation Thus the scheme originally proposed has been modified to eliminate potential operating problems associated with the preliminary design Automated Data Acquisition System Although the CO₂ gasification data were obtained manually the ultimate objective of the project to develop a quantitative understanding of the complete gasification rate process in the complex synthesis gas milieu calls for automated programming control of the mass spectrometer In addition the current mass spectrometer signal processing technique requires the use of a lock in amplifier to extract the modulated portion of the total signal due to the beam species only in an analog mode In order to allow fast scanning of a number of species the characteristic dwell time required by the lock in amplifier on a particular mass peak must be decreased These requirements are being met by implementing automated mass programming and data collection and direct digital phase sensitive pulse counting *Fossil Energy Update*, 1976 Kinetics of coal gasification under industrial conditions Marcel Weeda, 1995 **Computational Modeling of Underground Coal Gasification** Vivek V. Ranade, Sanjay M Mahajani, Ganesh Arunkumar Samdani, 2019-07-15 The book deals with development of comprehensive computational models for simulating underground coal gasification UCG It starts with an introduction to the UCG process and process modelling inputs in the form of reaction kinetics flow patterns spalling rate and transport coefficient that are elaborated with methods to generate the same are described with illustrations All the known process models are reviewed and relative merits and limitations of the modeling approaches are highlighted and compared The book describes all the necessary steps required to determine the techno economic feasibility of UCG process for a given coal reserve through modeling and simulation **Advances in Energy Resources and Environmental Engineering** Abdelfatah Abomohra, Razif Harun, Jia Wen, 2024-06-26 This book provides the recent advanced research results of environmental engineering and energy resources covering the main multidisciplinary research on waste treatment and recycling ecological environment protection energy strategy management etc The

exploitation and extensive utilization of energy and resources result in negative impacts on the environment Therefore the use of energy and resources efficiently and eco friendly has become an urgent research direction in environmental engineering This book aims to promote scientific information exchange between scholars from universities research centers and high tech enterprises around the world which is beneficial to researchers and practitioners in the field of environmental engineering

Natural Gas Substitutes from Coal and Oil Shaik A. Qader,1985 *Kinetics of Char Gasification Reactions Under Conditions of Underground Coal Gasification* ,1977 This project is directed toward support studies for the national endeavor on in situ coal gasification The objective is to determine reaction controlling variables and reaction kinetics for gasification of chars resulting from pyrolysis of coal in underground gasification The data obtained from these studies are used in the mathematical modeling of in situ gasification systems in order to understand and interpret field experimental data and to design future field studies The reactions being studied include steam char CO sub 2 char and water gas shift reactions as well as methane producing reactions such as the methanation of CO or the hydrogen char reaction The kinetics studies are carried out in a packed bed differential reactor in which steam H sub 2 CO sub 2 and or other reactants are blended with N sub 2 to obtain the desired total pressure and partial pressures of reactants The preparation of the char is carried out immediately prior to gasification in the reactor under conditions of pressure heating rate and sweeping gas composition similar to those encountered in underground gasification The coals studied include Wyodak and Hanna subbituminous coals and Pittsburgh seam high volatile bituminous coal Kinetic data are reported for the reaction of steam with chars prepared from the Wyodak and Hanna coals The dependence of the reaction rate on the partial pressures of reactant steam and product hydrogen is described The temperature dependence of the reaction rates indicates that diffusion of reactants and products through pore structure of Hanna char limits the reaction more severely than in the case of the

Wyodak char The rate of reaction of steam with Wyodak char is approximately 50% greater than the rate observed with the Hanna char The reaction order with respect to steam at low partial pressures of steam varies from 0.5 to approximately 1 Preliminary information is also reported for reaction of steam with chars prepared from Pittsburgh seam coal
