**Bradykinin and Related Kinins** F. Sicuteri, 2012-12-06 At the turn of the present century researchers recognized that damaged tissue released chemical agents capable of causing catastrophic effects on the whole organism upon entering the blood stream Following the discovery of histamine these agents at first seemed identifiable with biogenic amines However very soon after the development of highly selective antagonists little responsibility was ascribed to the amines and the tissue factors were wrapped once again in mystery One can imagine perhaps and envy the fascinating moments experienced by the pioneers in the kinin field when they realized that plasma had an enormous store of principles endowed with biologic activity practically indistinguishable from histamine possessing a complex turnover and regulated by obscure biochemical mechanisms Like other biochemical eras the era of the kinins was opened by a pioneer stage exceptionally long and exciting After years of arduous isolation researchers realized that kinins may not only be the key to unlocking the mystery of histamine like substances but also may open the way to understanding other basic problems in pathology possibly associated with tissue factors The Symposium held at Fiesole could be regarded as a balance sheet representing the climax of the initial revolutionary stage and the beginning of the evolution stage Research is all the more successful if supported by its development and application of kinins to pathology with hesitation and apprehension even with diffidence but then with ever increasing enthusiasm and persuasion identified those areas of human pathology in which pathogenetic implications of the system are to say the least attractive Perhaps the most interesting characteristic of the Fiesole Symposium really was the grafting of the human kinin stage onto the biological and experimental stages Thus new light is shed on basic problems involving the pathology of man as shock angioneurotic edema uratic arthritis intracranial hemorrhage and acute local and general reactions to thermal mechanical and infectious assaults It is with a certain degree of emotion that we now reconsider those terms and phenomena we were accustomed to seeing only from a cold biochemical point of view such as the Hageman factor the kallikrein inhibitor and the permeability factor under the warm light shed by the sufferings of man This warmth typical of human investigation homogenized by the severity of experimental research has contributed in making the scientific sessions more lively and above all in creating the spontaneous and friendly atmosphere prevailing at Fiesole A further contribution was the striking contrast as harmonious as a musical counterpoint afforded by the amazing science fiction like adventure in space which ended happily during the Symposium and the stern walls of Castel di Poggio at Fiesole and the supremely serene beauty of the Etruscan landscape The sociability and friendliness of all the participants helped to overcome technical difficulties encountered during the Symposium Members of the Organizing Committee in particular Professors Rocha e Silva Giotti Keele Armstrong Back and Secretaries Franchi Fanciullacci and Siddel all helped generously Valuable support both moral and material was offered by the Ministero della Sanita by the Consiglio Nazionale delle Ricerche by the young but energetic Societa Italiana di Farmacologia Clinica and by the Brazilian Society of Pharmacology and Experimental

Therapeutics The Fiesole Town Council and the Mayor Mr Adriano Latini offered their warm and friendly hospitality even placing Castel di Poggio at our disposal The technical manager Dr Buongiorno informally and skillfully overcame all difficulties and met all emergencies thus attaining the success of the Symposium similar to that held in Florence in 1965

**Kinins** Nathan Back,2012-12-06 The tradition of meeting together periodically at Fiesole in Florence by now dear to those interested in the problems of Kinins was respected once again This year the Symposium Kinin 1975 was held on the 15th 17th of July Participation at the Symposium drew attention to the fact that 1975 was a particularly difficult year due to the delicate international economic situation as well as the time restrictions for organizing the Symposium as a satellite conference to the Sixth International Congress of Pharmacology held in Helsinki Finland Despite these difficulties the Kinin 175 Symposium was an unquestioned success due in great part to the more than 40 contributors who presented their most current studies at the customary high scientific standard presentations that provoked and stimulated considerable discussion and debate While our family tree now includes new and active members the presence of many members of our Kinin society unable to attend was missed In particular we mourn the death of Professor E Werle one of the most outstanding pioneers in the field of the kallikrein kinin system His friendship participation and counsel was and will continue to be sorely missed by his many colleagues and students who are indebted to him for his voluminous and scientifically expert contributions continued until the very end of his most full and productive life As in the past the atmosphere of friendship and relaxation of the Symposium enhanced the very useful communication and exchange of ideas and information amongst the participants

**Kinins** Michael Bader,2011-11-30 This handbook of kinin biology and biochemistry covers the current knowledge of kinins a family of peptides involved in numerous physiological and pathophysiological processes Recent publications have shown that the kinin system is highly relevant in a variety of disease states such as diabetes multiple sclerosis and traumatic injuries Furthermore the first drug targeting system has just been approved for clinical use The goal of this book is to provide advanced students and researchers a basic understanding of the kinin system and its role within the various organ systems The authors of this book are experts in their fields including a Nobel Laureate

**Kinins** V K. Abe,2013-04-18 The physiological and pathological significance of the kallikrein kinin system was recently explored extensively resulting in a rapid accumulation of information regarding their potential importance This publication provides an integrated picture of the latest information on the kallikrein kinin system It contains contributions from morphologists geneticists biochemists pharmacologists physiologists and clinicians The Fifth International Kinin Congress Nov 29 Dec 3 1987 provided a forum for the exchange of information and ideas on the kallikrein kinin system The participation of more than 350 scientists from 23 countries reflects the widespread interest and international scope of research activity in the physiological and pathological functions of the kallikrein kinin system A total of 275 papers including posters were presented attesting to the unquestioned success of this Congress These proceedings in two volumes contain the collective studies presented studies of high scientific

standard that provoked stimulating and fruitful discussions Also included in these volumes are the two plenary lectures presented by Dr H A Margolius USA and Dr S Nakanishi Japan During the last decade our knowledge of the role of the kallikrein kinin system in health and disease has been greatly advanced by the development of antagonists to bradykinin and the introduction to clinical practice of converting enzyme inhibitors Symposia on converting enzyme and on recent advances in research on the kallikrein kinin system are included in the proceedings *Kinins IV* Lowell Greenbaum,2012-12-06

Scientists from 25 countries came together at the Hyatt Regency Hotel on October 21-25 1984 for the 4th International Kinin Congress in the beautiful city of Savannah Georgia Many of the delegates enjoyed southern hospitality for the first time The friendly city with its streets lined with the Live Oak Tree symbol of the Congress the balmy weather and the excellent facilities of the hotel set the stage for scientific events and exchange that proved so successful The organization of the meeting was the result of many hours days and weeks of effort by many including from Augusta Drs James H Sutherland John Catravas William Davis Jr and Hiroshi Okamoto and from Charleston SC Julie Chao Ronald Mayfield and Donald Miller Special thanks go to Ms Cher Cornett of the Department of Medical Illustration at the Medical College of Georgia for her talent in the design of the logo as well as the graphics of the program and abstracts We are indeed indebted to Dr Paul Brucker Director of the Division of Health Communications at the Medical College of Georgia for his considerable aid in spending time with us to arrange the programming format and continuity Ms Sandra Usry provided very excellent and devoted secretarial help for several years while the Congress was in the making *Vasopeptides* N. Back,2012-12-06

The dynamic state of developments within the field of the vasoactive polypeptides is reflected in the continuous series of publications appearing on this topic Thus the proposal to convene another symposium only two years after the 1969 Fiesole Symposium Plenum Press 1970 was received enthusiastically and with high expectation Enthusiasm was based undoubtedly in part on meeting together once again in the very pleasant surroundings of Florence with most gracious and enchanting hosts The 25th International Congress on Physiological Sciences held in Munich the following week also provided the impetus for the organization of this satellite symposium on vasopeptides However the accelerated pace of research in the kinin field was the major motivating force for the symposium It was felt necessary to inform each other of the many advances that were taking place in the varied aspects of this specialized but important field of The role of kinins in both physiologic and pathologic processes still remains to be elucidated definitively Thus these proceedings contain new and unpublished information on the chemistry biochemistry physiology pharmacology as well as pathophysiology of vasopeptides Recent data on structure activity relationships of kinin analogues are complemented by a description of radioimmunoassay techniques for kinins and studies on the site of synthesis of substrates for kinin forming enzymes **Recent Progress on Kinins** Hans Fritz,Gerd Bönner,1992 [A Guide to Allergies](#) Dr.Ramdas, Anuradha S.K.,2005 [Neuropeptide Systems as Targets for Parasite and Pest Control](#) Timothy G. Geary,Aaron Maule,2011-01-13

The need to continually discover new agents for the

control or treatment of invertebrate pests and pathogens is undeniable Agriculture both animal and plant succeeds only to the extent that arthropod and helminth consumers vectors and pathogens can be kept at bay Humans and their companion animals are also plagued by invertebrate parasites The deployment of chemical agents for these purposes inevitably elicits the selection of resistant populations of the targets of control necessitating a regular introduction of new kinds of molecules Experience in other areas of chemotherapy has shown that a thorough understanding of the biology of disease is an essential platform upon which to build a discovery program Unfortunately investment of research resources into understanding the basic physiology of invertebrates as a strategy to illuminate new molecular targets for pesticide and parasiticide discovery has been scarce and the pace of introduction of new molecules for these indications has been slowed as a result An exciting and so far unexploited area to explore in this regard is invertebrate neuropeptide physiology This book was assembled to focus attention on this promising field by compiling a comprehensive review of recent research on neuropeptides in arthropods and helminths with contributions from many of the leading laboratories working on these systems

**Chemistry and Biology of the Kallikrein-kinin System in Health and Disease** John J. Pisano, Karl Frank Austen, 1977 The diversity and significance of recent research on the kallikrein kinin system provided the impetus for this international conference the purpose of which was the assessment of our knowledge and the development of a base from which to plan future research Through the generous support of the Fogarty International Center and of the National Heart Lung and Blood Institute the Organizing Committee was able to bring together authorities in virtually every aspect of kinin research The kallikrein kinin field was divided into three major areas A Characterization and assays of components of the kallikrein kinin systems B Interacting systems Fibrinolysis complement coagulation and prostaglandins and C Physiological pathological and clinical significance Invited experts were instructed to present concise critical reviews along with any new data Time was also provided for discussants to present relevant comments and data Selected discussions accompany the keynote reports and these comprise the short chapters

**Receptors** P. Michael Conn, 2013-10-22 Methods in Neurosciences Volume 11 Receptors Model Systems and Specific Receptors is a compilation of

papers that describes techniques and information that are important to the neurosciences This volume discusses preferred receptor techniques molecular techniques and methods to determine receptor subclasses and localization in the ligand design The first paper discusses the steroid receptor found in the central nervous system for steroid hormones that affects strongly the structure and function of both developed and immature nervous systems Another paper describes how a glycoprotein of 79.5 kDa transferrin carries iron in the blood stream for delivery to different tissues after the transferrin has bound with a specific receptor on the surface of the cell This book also explains the binding sites of pituitary adenylate cyclase activating polypeptide in the human brain while one paper analyzes the neurotensin receptors during the primary culture of neurons This volume then also analyzes the structure and function of the fast nerve growth factor receptor particularly how a signal on the outside of a cell is transmitted to the cell's interior This collection is helpful for microbiologists cellular researchers students and professors in the discipline of neurosciences

**Biorational Control of Arthropod Pests** Isaac Ishaaya, A. Rami Horowitz, 2009-08-28 For nearly 50 years pest control was mostly based on broad spectrum conventional insecticides such as organochlorines organophosphates carbamates and pyrethroids However the severe adverse effects of pesticides on the environment problems of resistance reaching crisis proportions and public protests led to stricter regulations and legislation aimed at reducing their use Ways to reduce the use of synthetic pesticides in plant protection and to use more alternative and novel methods for pest control or biorational control are the challenges of pest control for the twenty first century The term biorational biological pesticides can be defined as the use of specific and selective chemicals often with a unique mode of action that are compatible with natural enemies and the environment with minimal effect on nontarget organisms Biorational control is based on a diversity of chemical biological and physical approaches for controlling insect pests which results in minimum risk to man and the environment

**Animal Toxins** Herve Rochat, Marie-France Martin-Eauclaire, 2013-12-01 It is now something of a truism to say that natural toxins form a major component of the molecular tools used increasingly frequently by the ever growing number of laboratories of various kinds Evidence for this is provided not only by the increasing number of firms including such toxins in their catalogues but also by the large number of demands received by those who discover new toxins This book is designed to facilitate the work of scientists interested in exploring a new domain of toxicology or in using toxins as tools for research The length of this book has been kept reasonable by concentrating on animal toxins most of which are polypeptides The venom of each animal contains a large number of toxins which may be similar in terms of their physical and chemical properties and are therefore difficult to purify However their pharmacological activities may be very different These toxins are extremely active and it is therefore necessary to demonstrate conclusively that the activity observed really does correspond to the newly characterized
