Dean, Daniel Voss, 2006-04-06 Our initial motivation for writing this book was the observation from various students that the subject of design and analysis of experiments can seem like a bunch of miscellaneous topics We believe that the identification of the objectives of the experiment and the practical considerations governing the design form the heart of the subject matter and serve as the link between the various analytical techniques We also believe that learning about design and analysis of experiments is best achieved by the planning running and analyzing of a simple experiment With these considerations in mind we have included throughout the book the details of the planning stage of several experiments that were run in the course of teaching our classes The experiments were run by students in statistics and the applied sciences and are sufficiently simple that it is possible to discuss the planning of the entire experiment in a few pages and the procedures can be reproduced by readers of the book In each of these experiments we had access to the investigators actual report including the difficulties they came across and how they decided on the treatment factors the needed number of observations and the layout of the design In the later chapters we have included details of a number of published experiments The outlines of many other student and published experiments appear as exercises at the ends of the chapters Complementing the practical aspects of the design are the statistical aspects of the analysis We have developed the theory of estimable functions and analysis of variance with some care but at a low mathematical level      *It's about Time! Science Projects* Robert Gardner, 2003 Robert Gardner a well respected science writer now writing for the elementary level reader introduces a set of experiment books that allow young readers to discover the answer to questions through simple activities with everyday items Includes indications of which projects are best for science fair projects Clear warnings call out where adult supervision is necessary These books contain words to know a further reading list Internet addresses and an index How long does it take bread to get moldy Can you tell time using the sun What is your reaction time There are so many things to measure in the world around you The ideas introduced in this book will help you perform exciting and fun experiments Some will even give you ideas for your science fair All you need are some simple materials most of which can be found around your
