Hierarchical and Geometrical Methods in Scientific Visualization Gerald Farin,Bernd Hamann,Hans Hagen,2011-05-12

Hierarchical and Geometrical Methods in Scientific Visualization Gerald Farin,Bernd Hamann,Hans Hagen,2003

This book emerged from a DoE NSF sponsored workshop held in Tahoe City California October 2000 About fifty invited participants presented state of the art research on topics such as terrain modeling multiresolution subdivision wavelet based scientific data compression topology based visualization data structures data organization and indexing schemes for scientific data visualization All invited papers were carefully refereed resulting in this collection The book will be of great interest to researchers graduate students and professionals dealing with scientific visualization and its applications

Hierarchical and Geometrical Methods in Scientific Visualization Gerald Farin,Bernd Hamann,Hans Hagen,2012-12-06 The nature of the physical Universe has been increasingly better understood in recent years and cosmological concepts have undergone a rapid evolution see e g 11 2 or 5 Although there are alternate theories it is generally believed that the large scale relationships and homogeneities that we see can only be explained by having the universe expand suddenly in a very early inflationary period Subsequent evolution of the Universe is described by the Hubble expansion the observation that the galaxies are flying away from each other We can attribute different rates of this expansion to domination of different cosmological processes beginning with radiation evolving to matter domination and relatively recently to vacuum domination the Cosmological Constant term 4 We assume throughout that we will be relying as much as possible on observational data with simulations used only for limited purposes e g the appearance of the Milky Way from nearby intergalactic viewpoints The visualization of large scale astronomical data sets using fixed non interactive animations has a long history Several books and films exist ranging from Cosmic View The Universe in Forty Jumps 3 by Kees Boeke to Powers of 10 6 13 by Charles and Ray Eames and the recent Imax film Cosmic Voyage 15 We have added our own contribution 9 Cosmic Clock which is an animation based entirely on the concepts and implementation described in this paper

Geometric Modeling for Scientific Visualization Guido Brunnnett,Bernd Hamann,Heinrich Müller,Lars Linsen,2013-04-17 Geometric Modeling and Scientific Visualization are both established disciplines each with their own series of workshops conferences and journals But clearly both disciplines overlap which led to the idea of composing a book on Geometric Modeling for Scientific Visualization The editors received 39 submissions of high quality research and survey papers from which the 27 strongest are published in this book All papers underwent a strict refereeing process Topics covered include Surface Reconstruction and Interpolation Surface Interrogation and Modeling Wavelets and Compression on Surfaces Topology Distance Fields and Solid Modeling and others

Topology-based Methods in Visualization Helwig Hauser,Hans Hagen,Holger Theisel,2007-05-24 Enabling insight into large and complex datasets is a prevalent theme in visualization research for which different approaches are pursued Topology based methods are built on the idea of abstracting characteristic structures such as the topological

skeleton from the data and to construct the visualizations accordingly There are currently new demands for and renewed interest in topology based visualization solutions This book presents 13 peer reviewed papers as written results from the 2005 workshop Topology Based Methods in Visualization that was initiated to enable additional stimulation in this field It contains a longer chapter dedicated to a survey of the state of the art as well as a great deal of original work by leading experts that has not been published before spanning both theory and applications It captures key concepts and novel ideas and serves as an overview of current trends in topology based visualization research

Scientific Visualization: The Visual Extraction of Knowledge from Data Georges-Pierre Bonneau,Thomas Ertl,Gregory M. Nielson,2006-01-20 One of the greatest scientific challenges of the 21st century is how to master organize and extract useful knowledge from the overwhelming flow of information made available by today s data acquisition systems and computing resources Visualization is the premium means of taking up this challenge This book is based on selected lectures given by leading experts in scientific visualization during a workshop held at Schloss Dagstuhl Germany Topics include user issues in visualization large data visualization unstructured mesh processing for visualization volumetric visualization flow visualization medical visualization and visualization systems The book contains more than 350 color illustrations

Mathematical Foundations of Scientific Visualization, Computer Graphics, and Massive Data Exploration Torsten Möller,Bernd Hamann,Robert D. Russell,2009-06-12 The goal of visualization is the accurate interactive and intuitive presentation of data Complex numerical simulations high resolution imaging devices and increasingly common environment embedded sensors are the primary generators of massive data sets Being able to derive scientific insight from data increasingly depends on having mathematical and perceptual models to provide the necessary foundation for effective data analysis and comprehension The peer reviewed state of the art research papers included in this book focus on continuous data models such as is common in medical imaging or computational modeling From the viewpoint of a visualization scientist we typically collaborate with an application scientist or engineer who needs to visually explore or study an object which is given by a set of sample points which originally may or may not have been connected by a mesh At some point one generally employs low order piecewise polynomial approximations of an object using one or several dependent functions In order to have an understanding of a higher dimensional geometrical object or function efficient algorithms supporting real time analysis and manipulation zooming are needed Often the data represents 3D or even time varying 3D phenomena such as medical data and the access to different layers slices and structures the underlying topology comprising such data is needed

Visualization Handbook Charles D. Hansen,Chris R. Johnson,2011-08-30 The Visualization Handbook provides an overview of the field of visualization by presenting the basic concepts providing a snapshot of current visualization software systems and examining research topics that are advancing the field This text is intended for a broad audience including not only the visualization expert seeking advanced methods to solve a particular problem but also the novice looking for general background information on

visualization topics The largest collection of state of the art visualization research yet gathered in a single volume this book includes articles by a who s who of international scientific visualization researchers covering every aspect of the discipline including Virtual environments for visualization Basic visualization algorithms Large scale data visualization Scalar data isosurface methods Visualization software and frameworks Scalar data volume rendering Perceptual issues in visualization Various application topics including information visualization Edited by two of the best known people in the world on the subject chapter authors are authoritative experts in their own fields Covers a wide range of topics in 47 chapters representing the state of the art of scientific visualization

Shape Analysis and Structuring Leila de Floriani, Michela Spagnuolo, 2007-12-24 With a lot of recent developments in the field this much needed book has come at just the right time It covers a variety of topics related to preserving and enhancing shape information at a geometric level The contributors also cover subjects that are relevant to effectively capturing the structure of a shape by identifying relevant shape components and their mutual relationships
