Mathematical Modelling for Polymer Processing Vincenzo Capasso,2012-12-06 Polymers are substances made of macromolecules formed by thousands of atoms organized in one homopolymers or more copolymers groups that repeat themselves to form linear or branched chains or lattice structures The concept of polymer traces back to the years 1920 s and is one of the most significant ideas of last century It has given great impulse to indus try but also to fundamental research including life sciences Macromolecules are made of sm all molecules known as monomers The process that brings monomers into polymers is known as polymerization A fundamental contribution to the industrial production of polymers particularly polypropylene and polyethylene is due to the Nobel prize winners Giulio Natta and Karl Ziegler The ideas of Ziegler and Natta date back to 1954 and the process has been improved continuously over the years particularly concerning the design and shaping of the catalysts Chapter 1 due to A Fasano is devoted to a review of some results concerning the modelling of the Ziegler Natta polymerization The specific ex am pie is the production of polypropilene The process is extremely complex and all studies with relevant mathematical contents are fairly recent and several problems are still open

Growth and Defect Structures H. C. Freyhardt, 2012-12-06 Polytypic crystals of semiconductors dielectrics and magnetic materials attract an increasing attention in science and technology On one hand the phenomenon of polyty pism is one of the fundamental problems of solid state physics its solution would make it possible to elucidate the problem of the interconnection of different structures and intraatomic forces acting in crystals On the other hand the polytypic difference in crystals is most strongly expressed in electro physical properties which makes their application promising mainly in semiconductor electronics Thus the difficulties of pro ducing modulated structures in polytypic crystals can be overcome since these crystals form a class of one dimensional natural superlattices At present it has become clear that polytypism in crystals and compounds is the rule rather than an exception and it is determined by the conditions of their synthesis This phenomenon seems to be rather widespread in nature and fundamental for crystal formation H polytypism was recently thought to be but a specific structural feature of a few substances such as SiC ZnS CdI etc by now this phenomenon has been discovered in 2 v an increasing range of crystalline substances for example in silicon diamond AIIIB VI AIIB AIBVII compounds in ternary semiconducting compounds metals silicates perovskites mica organic crystals. The more accurately the structural studies are per formed the greater is the number of crystals of various substances found to exhibit the phenomenon of polytypism Recently excellent surveys have systematized our knowledge of polytypism Materials under **Extreme Loadings** Eric Buzaud, Ioan R. Ionescu, Georges Z. Voyiadjis, 2013-03-04 This book presents recent and cutting edge advances in our understanding of key aspects of the response of materials under extreme loads that take place during high velocity impact and penetration The focus of the content is on the numerous challenges associated with characterization and modeling of complex interactions that occur during these highly dynamic events The following specific topics among others are addressed characterization of material behavior under extreme loadings estimate of damage effects related to moisture contents large pressures large strain rates etc measurement of microstructural changes associated with damage and mesoscopic scale modeling macroscopic modeling using the framework of the theory of viscoplasticity and damage modeling and simulation of localization cracking and dynamic fragmentation of materials application to penetration mechanics and trajectory instabilities The book gathers together selected papers based on work presented as invited lectures at the 2nd US France symposium held on 28 30 May 2008 in Rocamadour France The conference was organized by Eric Buzaud DGA Centre d tudes de Gramat under the auspices of the International Center for Applied Computational Mechanics ICACM
