High Frontier Curtis Peebles, Air Force Museums Program, 2012-05-28 The United States military space program began at the end of World War II when a few people realized that space flight was now achievable and could be employed to military advantage Science and technology in the form of advance radar jet propulsion ballistic rockets such as the V 2 and nuclear energy had dramatically altered the nature of war Army Air Forces Commanding General Henry Arnold wrote in November 1845 that a space ship is all but practicable today and could be build within the foreseeable future The following month the Air Force Scientific Advisory Group concluded that long range rockets were technically feasible and that satellites were a definite possibility To Reach the High Frontier Roger D. Launius, Dennis R. Jenkins, 2014-07-11 Access no single word better describes the primary concern of the exploration and development of space Every participant in space activities civil military scientific or commercial needs affordable reliable frequent and flexible access to space To Reach the High Frontier details the histories of the various space access vehicles developed in the United States since the birth of the space age in 1957 Each case study has been written by a specialist knowledgeable about the vehicle described and places each system in the larger context of the history of spaceflight The technical challenge of reaching space with chemical rockets the high costs associated with space launch the long lead times necessary for scheduling flights and the poor reliability of the

rockets themselves show launch vehicles to be the space program s most difficult challenge **High Frontier** Department of Defense, U. S. Military, U. S. Air Force (USAF), World Spaceflight News, U. of human beings with technology and with each other Spying from Space fills a gap in space history by telling the story of the command and control systems that made rockets and satellites useful Those interested in space flight or intelligence efforts will benefit from this revealing look into a little known aspect of American achievement Those fascinated by how large complex organizations work will also find this an intriguing study of inter service rivalries and clashes between military and Air Force and Space Digest ,2003 US Presidents and the Militarization of Space, 1946-1967 Sean N. Kalic, 2012-04-10 In the clash of ideologies represented by the Cold War even the heavens were not immune to militarization Satellites and space programs became critical elements among the national security objectives of both the United States and the Soviet Union According to US Presidents and the Militarization of Space 1946 1967 three American presidents in succession shared a fundamental objective of preserving space as a weapons free frontier for the benefit of all humanity Between 1953 and 1967 Presidents Eisenhower Kennedy and Johnson all saw nonaggressive military satellite development as well as the civilian space program as means to favorably shape the international community s opinion of the scientific technological and military capabilities of the United States Sean N Kalic's reinterpretation of the development of US space policy based on documents declassified in the past decade demonstrates that a single vision for the appropriate uses of space characterized American strategies across parties and administrations during this period Significantly Kalic s findings contradict the popular opinion that the United States sought to weaponize space and calls into question the traditional interpretation of the space race as a simple action reaction paradigm Indeed beyond serving as a symbol and ambassador of US technological capability its satellite program provided the United States with advanced nonaggressive military intelligence gathering platforms that proved critical in assessing the strategic nuclear balance between the United States and the Soviet Union It also aided the three administrations in countering the Soviet Union's increasing international prestige after its series of space firsts beginning with the launch of Sputnik in 1957 Critical Issues in the History of Spaceflight Stephen J. Dick, Steven J. Dick, Roger D. Launius, 2006 In March 2005 the NASA History Division and the Division of Space History at the National Air and Space Museum brought together a distinguished group of scholars to consider the state of the discipline of space history This volume is a collection of essays based on those deliberations. The meeting took place at a time of extraordinary transformation for NASA stemming from the new Vision of Space Exploration announced by President George W Bush in January 204 to go to the Moon Mars and beyond This Vision in turn stemmed from a deep reevaluation of NASA's goals in the wake of the Space Shuttle Columbia accident and the recommendations of the Columbia Accident Investigation Board The new goals were seen as initiating a New Age of Exploration and were placed in the context of the importance of exploration and discovery to the American experiences Amazon Space Politics and Policy E. Sadeh, 2006-04-11 Space Politics and Policy An Evolutionary Perspective provides a comprehensive survey of Space Policy This book is organized around two themes Space Policy is evolutionary in that it has responded to dramatic political events

such as the launching of Sputnik and the Cold War and has undergone dynamic and evolutionary policy changes over the course of the space age Space Policy is an integral part of and interacts with public policy processes in the United States and abroad The book analyzes Space Policy at several levels including historical context political actors and institutions political processes and policy outcomes It examines the symbiotic relationships between policy technology and science provides a review and synthesis of the existing body of knowledge in Space Policy and identifies Space Policy trends and developments from the beginnings of the space age through the current era of the twenty first century **Beyond Horizons** David N. America's Space Sentinels Jeffrey T. Richelson, 2012-11-20 Originally published in 1999 America's Space Sentinels won the American Astronautical Society's prestigious Eugene Emme Astronautical Literature Award and quickly established itself as the definitive book for understanding a crucial component of our national defense capabilities. It focused on the emergence and evolution of the Air Force's Defense Support Program DSP satellite system which came on line in 1970 and continued to perform at a high level through the turn of this century and beyond For this new edition Jeffrey Richelson covers significant developments during the last dozen years relating to the deployment of these satellites especially the struggles to develop and launch the follow on Space Based Infrared System SBIRS beginning in the late 1990s and continuing up to the present The result is a book that remains the first and best source of information regarding these vital programs As Richelson notes SBIRS like its aging but still functioning predecessor has been designed primarily to provide instant early warning of missile launches from around the globe particularly China Russia North Korea Pakistan India and Iran through the infra red sensors carried on each satellite But the new system beset by hardware software fiscal and political problems has only managed to move forward in fits and starts While it has done so the DSP system has continued to monitor the skies above the earth two key ground stations in Australia and Germany have closed nuclear powers Russia and the United States conferred extensively over the so called Y2K problem concerned that a computer malfunction might produce false alarms of a missile attack and worries over potential launches from nations perceived as hostile to American interests have increased substantially Militarizing Outer Space Alexander C.T. Geppert, Daniel Brandau, Tilmann Siebeneichner, 2020-12-02 Militarizing Outer Space explores the dystopian and destructive dimensions of the Space Age and challenges conventional narratives of a bipolar Cold War rivalry Concentrating on weapons warfare and vio lence this provocative volume examines real and imagined endeavors of arming the skies and conquering the heavens The third and final volume in the groundbreaking European Astroculture trilogy Militarizing Outer Space zooms in on the interplay between security technopolitics and knowledge from the 1920s through the 1980s Often hailed as the site of heavenly utopias and otherworldly salvation outer space transformed from a promised sanctuary to a present threat where the battles of the future were to be waged Astroculture proved instrumental in fathoming forms and functions of warfare s futures past both on earth and in space The allure of dominating outer space the book shows was neither limited to the early twenty first

century nor to current American space force rhetorics **The Encyclopedia of Middle East Wars** Spencer C. Tucker, 2010-10-08 This in depth study of U S involvement in the modern Middle East carefully weighs the interplay of domestic cultural religious diplomatic international and military events in one of the world's most troubled regions The monumental five volume The Encyclopedia of Middle East Wars The United States in the Persian Gulf Afghanistan and Iraq Conflicts is a must have resource for anyone seeking to comprehend U S actions in this volatile region Under the expert editorship of Spencer C Tucker the encyclopedia traces 20th and 21st century U S involvement in the Middle East and south central Asia concentrating on the last three decades Beginning with the 1980 1988 Iran Irag War it covers the 1979 1989 Soviet occupation of Afghanistan the 1991 Persian Gulf War allied punitive actions against Iraq during the 1990s the Afghanistan War the Iraq War and the Global War on Terror Many smaller military actions against Iran Iraq Libya Afghanistan and other regimes that have been involved in international terrorism are also included Diplomacy religion as it pertains to Middle East conflict and social cultural developments are other key subjects of analysis as is the interplay of politics with military policy in the United States and other nations involved in the region **Fighting from Above** Brian D. Laslie, 2024-03-19 The story of the United States Air Force USAF stretches back to aerial operations prior to the First World War well before the USAF became a separate service and looks forward to a new era of airpower in space Fighting from Above presents a concise account of this expansive history offering a new perspective on how the air forces of the United States created an independent way of warfare over time From the earliest battles of the USAF s predecessor organizations to its modern incarnation Brian D Laslie identifies four distinct and observable ways of war that developed over four distinct epochs Beginning with the development of early air power 1906 1941 he highlights the creation of roles and missions with bombardment theory and practice ascendant An era of strategic dominance 1942 1975 followed in which the ideas of strategic bombardment ruled the air force when such notions were unceremoniously proven false during the Vietnam era conflicts a period of tactical ascendancy 1975 2019 began Finally Laslie considers the current environment where much of the story of the USAF remains unwritten as it grapples with the prospects and challenges posed by drones and the U S Space Force While detailing combat operations Fighting from Above also pays close attention to technology politics rivalries logistics policy organization equipping and training Thorough concise and innovative in its approach it is an authoritative exceptionally readable history of the development of American airpower *The Politics of Space* Eligar Sadeh, 2010-11 This title provides a concise guide to the way in which politics and space exploration interact Spy Capitalism Jonathan E. Lewis, 2008-10-01 What happens when the world of venture capital collides with the world of espionage To find the answer Jonathan E Lewis takes us inside the executive suite at Itek Corporation during the Cold War years from 1957 to 1965 Itek was manufacturing the world s most sophisticated satellite reconnaissance cameras and the information these cameras provided about Soviet missiles and military activity was critical to U S security So was Itek This intriguing book examines in

unprecedented detail the challenges Itek faced not only as a contractor for the most important national security program of the time the CIA s Project CORONA spy satellite but also as a start up company competing with established industrial giants. In telling the story of Itek Corporation Lewis fills important gaps in the history of American intelligence business history and management studies. In addition he addresses a variety of important themes such as the compatibility of secrecy and capitalism the struggle between profits and patriotism and the workings of power and connections in America Lewis explores how Itek executives contended with myriad business problems that were compounded by the need to raise capital without revealing the complete truth about the company s highly secret business. He also presents for the first time information about Laurance Rockefeller's venture capital operations and his role in financing Itek based on the financier's private Itek papers. The book is both a remarkable case study of a company at the heart of the American intelligence industrial complex during the Cold War and a thought provoking examination of the impact of the CIA on the capitalist system it was created to defend

Embracing the Track of Phrase: An Mental Symphony within **High Frontier The Us Air Force And The Military Space Program**

In a world eaten by displays and the ceaseless chatter of quick connection, the melodic elegance and psychological symphony created by the written term frequently fade into the back ground, eclipsed by the constant sound and disruptions that permeate our lives.
