High Speed Flight:

High-Speed Flight Propulsion Systems S. N. B. Murthy, E. T. Curran, 1991 Annotation Leading researchers provide a cohesive treatment of the complex issues in high speed propulsion as well as introductions to the current capabilities for addressing several fundamental aspects of high speed vehicle propulsion development Includes more than 380 references 290 figures and tables and 185 equations

The SR-71 Test Bed Aircraft: A Facility for High-Speed Flight Research Stephen Corda, 2000 The SR 71 test bed aircraft is shown to be a unique platform to flight test large experiments to supersonic Mach numbers The test bed hardware mounted on the SR 71 upper fuselage is described This test bed hardware is composed of a fairing structure called the canoe and a large reflection plane flat plate for mounting experiments Total experiment weights including the canoe and reflection plane as heavy as 14 500 lb can be mounted on the aircraft and flight tested to speeds as fast as Mach 3.2 and altitudes as high as 80 000 ft A brief description of the SR 71 aircraft is given including details of the structural modifications to the fuselage modifications to the J58 engines to provide increased thrust and the addition of a research instrumentation system Information is presented based on flight data that describes the SR 71 test bed aerodynamics stability and control structural and thermal loads the canoe internal environment and reflection plane flow quality Guidelines for designing SR 71 test bed experiments are also provided

Three-dimensional, Unsteady-lift Problems in High-speed Flight Harvard Lomax, Max A. Heaslet, Franklyn B. Fuller, 1950 The problem of the build up of lift on two and three dimensional wings flying at high speeds is discussed as a boundary value problem for the classical wave equation Kirchhoff's formula is applied so that the analysis is reduced just as in the steady state to an investigation of sources and doublets Some simple applications of this method are considered including the determination of the starting lift of a three dimensional wing and the potential functions for some types of unsteady vortex motion

High-Speed Aerodynamics Facundo Conforti, The behavior of the wing profile within an airflow has been a subject of study since the dawn of time and even today it remains a relevant topic although only in relation to aircraft traveling at speeds below the speed of sound The study and analysis of high speed aerodynamics equal to or greater than the speed of sound was irrelevant at the beginning of the aeronautical era as aircraft could hardly reach supersonic speeds With advances in the commercial aviation industry aircraft improved their flight performance reaching speeds unimaginable to the pioneers who founded the principles of flight From this point on analysis and study of the wing profile within an air stream at limit speeds and above these transonic speeds and supersonic speeds began High speed aerodynamics is a companion volume to the highly successful Aerodynamics and proposes the study and analysis of all the factors involved in this subject but applied to speeds higher than traditional ones

High-Speed Dreams Erik M. Conway, 2008-11-03 In High Speed Dreams Erik M Conway

constructs an insightful history that focuses primarily on the political and commercial factors responsible for the rise and fall of American supersonic transport research programs Conway charts commercial supersonic research efforts through the changing relationships between international and domestic politicians military NASA contractors private investors and environmentalists He documents post World War II efforts at the National Advisory Committee on Aeronautics and the Defense Department to generate supersonic flight technologies the attempts to commercialize these technologies by Britain and the United States during the 1950s and 1960s environmental campaigns against SST technology in the 1970s and subsequent attempts to revitalize supersonic technology at the end of the century High Speed Dreams is a sophisticated study of politics economics nationalism and the global pursuit of progress Historians along with participants in current aerospace research programs will gain valuable perspective on the interaction of politics and technology

Recent Developments in High-Speed Transport Dmitry Yu. Strelets,Oleg N. Korsun,2023-04-10 This book describes the basic concepts and various aspects of creating a new generation supersonic passenger aircraft It presents the fundamental and applied problems essential to the design of aircraft of this type Solutions to the problems of reducing supersonic boom environmental noise harmful emissions increasing the efficiency of propulsion systems and the general concept and certification are described The development of high speed transport as a means of improving mobility and quality of life is a relevant task for research teams in many countries The publication includes selected articles from the 1st International Conference on High Speed Transport Development organized by the Moscow Aviation Institute National Research University which by participating in many research and commercial projects including international ones has accumulated a lot of competencies sufficient to act as a platform for knowledge exchange in this field The target audience of this book are researchers working on high speed transport postgraduate students as well as any individuals willing to broaden their knowledge of high speed aircraft
