Compact Models and Performance Investigations for Subthreshold Interconnects Rohit Dhiman, Rajeevan Chandel, 2014-11-07 The book provides a detailed analysis of issues related to sub threshold interconnect performance from the perspective of analytical approach and design techniques Particular emphasis is laid on the performance analysis of coupling noise and variability issues in sub threshold domain to develop efficient compact models The proposed analytical approach gives physical insight of the parameters affecting the transient behavior of coupled interconnects Remedial design techniques are also suggested to mitigate the effect of coupling noise The effects of wire width spacing between the wires wire length are thoroughly investigated In addition the effect of parameters like driver strength on peak coupling noise has also been analyzed Process voltage and temperature variations are prominent factors affecting sub threshold design and have also been investigated The process variability analysis has been carried out using parametric analysis process corner analysis and Monte Carlo technique The book also provides a qualitative summary of the work reported in the literature by various researchers in the design of digital sub threshold circuits This book should be of interest for researchers and graduate students with deeper insights into sub threshold interconnect models in particular In this sense this book will best fit as a text book and or a reference book for students who are initiated in the area of research and advanced courses in nanotechnology interconnect design and modeling **Tutorials on Emerging Methodologies and Applications in**

Operations Research Harvey J. Greenberg, 2006-06-16 This volume reflects the theme of the INFORMS 2004 Meeting in Denver Back to OR Roots Emerging as a quantitative approach to problem solving in World War II our founders were physicists mathematicians and engineers who quickly found peace time uses It is fair to say that Operations Research OR was born in the same incubator as computer science and it has spawned many new disciplines such as systems engineering

health care management and transportation science Although people from many disciplines routinely use OR methods many scientific researchers engineers and others do not understand basic OR tools and how they can help them Disciplines ranging from finance to bioengineering are the beneficiaries of what we do we take an interdisciplinary approach to problem solving Our strengths are modeling analysis and algorithm design We provide a quantitative foundation for a broad spectrum of problems from economics to medicine from environmental control to sports from e commerce to computational ometry We are both producers and consumers because the mainstream of OR is in the interfaces As part of this effort to recognize and extend OR roots in future probl solving we organized a set of tutorials designed for people who heard of the topic and want to decide whether to learn it The 90 minutes was spent addre ing the questions What is this about in a nutshell Why is it important Where can I learn more In total we had 14 tutorials and eight of them are published here **Nano**
