The Biochemistry of Glycoproteins and Proteoglycans William Lennarz, 2012-12-06 Although glycoproteins and proteoglycans have been a subject of research for many years it is only during the last five or so years that they have aroused the interest of a very broad cross section of investigators in the biological sciences The reason for this expanded interest in these molecules is simple not only are glycoproteins and proteoglycans ubiquitous but many are molecules with well defined and important biological functions The list of molecules that fall into this category grows daily interferon immunoglobulins certain hormones many cell surface receptors and viral coat proteins are but a few examples Thus investigators with interests as diverse as viral replication cell cell interactions polyisoprenoid synthesis secretory processes hormone responses embryonic development and immunology have become concerned with glycoproteins and proteoglycans The objective of this book is to summarize the current state of knowledge on the biochemistry of these molecules Coverage is by no means encyclopedic rather the thrust is to emphasize the recent advances The first chapter deals primarily with structural work on the oligosaccharide chains of glycoproteins but it will be apparent in it and in the succeeding two chapters on biosynthesis that not only do structural studies aid biosynthetic investigations but that studies on biosynthesis often play a major role in elucidation of structure

Chemical Reagents for Protein Modification Roger L. Lundblad, 2020-03-11 First published in 1991 Chemical Reagents for Protein Modification 2nd Edition provides a unique combination of theoretical and practical considerations for the use of chemical reagents for site specific modification of proteins The book is divided into three sections with the first section describing general techniques including information on the organic chemistry of the various modification reactions the separation and characterization of site specific modified proteins including applications to proteins separated by electrophoresis followed by blotting the specific chemical cleavage of peptide bonds in proteins the separation of peptides by high performance liquid chromatography and electrophoresis and the use of chemical reagents to assess conformational change in proteins The second section provides an encyclopedic description of reagents and reactions for the site specific modification of individual amino acid residues in proteins The final section presents descriptions of the use of chemical reagents to label biologically significant sites in proteins including enzyme active sites and the use of covalent cross linking to measure protein protein interactions Particular emphasis is placed on the use of photoaffinity reagents The book will be an extremely useful research tool for all investigators interested in the solution chemistry of proteins
