The Greenland Entomofauna Jens Böcher, N.P. Kristensen (†), Thomas Pape, Lars Vilhelmsen, 2015-05-26 In *The Greenland Entomofauna* an international team of 64 taxonomic specialists provide for the first time a richly illustrated guide to the identification of the 1200 species of Hexapods, Insects, Arachnids and Myriapods so far known to occur in the country. While the composition, origin and adaptations of the Greenland fauna has always been a challenge to biogeographers and ecologists, ecophysiologists, the provision of a tool for detailed identification of its constituent species is now particularly timely since global climate change will expectedly have a particularly noticeable impact on biota at high latitudes. This obviously renders the feasibility of monitoring distributional range shifts of the principal components of this biota a matter of some urgency. The Unexpected Louis St-Laurent Patrice Dutil, 2020-11-01 Much of Canada's modern identity emerged from the innovative social policies and ambitious foreign policy of Louis St-Laurent's Liberal government. His extraordinarily creative administration made decisions that still resonate today on health care, pensions and housing, on infrastructure and intergovernmental issues and further afield in developing Canada's global middle power role in global affairs and resolving the Suez Crisis. Yet St-Laurent remains an enigmatic figure. Contributors to *The Unexpected Louis St-Laurent* assess the degree to which he set the policy agenda. They explore the features of his personality that made him effective or sometimes less so, the changes he wrought on the state apparatus and federal-provincial relations and the substance of his government's policies. This wide-ranging collection fills a great void in Canadian political history, bringing together seasoned professionals and new scholars to investigate the far-reaching influence of a politician whose astute policies and bold resolve moved Canada into the modern era.

Birds of Nunavut James M. Richards, Anthony J. Gaston, 2018-08-15 Nunavut is a land of islands encompassing some of the most remote places on Earth. It is also home to some of the world's most fascinating bird

species The windswept tundra rocky shorelines and icy waters of this thinly populated land are integral to the survival of numerous breeding and non breeding birds including the colourful King Eider the stately Snowy Owl the spritely Snow Bunting and the globe spanning Northern Wheatear Birds of Nunavut is the first complete survey of every species known to occur in the territory It is co written by a team of eighteen experts who have conducted a combined total of 300 seasons of fieldwork in Nunavut They document 295 species of birds of which 145 are known to breed in the territory presenting a wealth of information on identification distribution ecology behaviour and conservation Lavishly illustrated with over 800 colour photographs and 155 maps it is a visually stunning reference work on the birds that live in and visit Nunavut

Insect Biodiversity Robert G. Foottit,Peter H. Adler,2018-04-03 Volume Two of the new guide to the study of biodiversity in insects Volume Two of Insect

Biodiversity Science and Society presents an entirely new companion volume of a comprehensive resource for the most current research on the influence insects have on humankind and on our endangered environment. With contributions from leading researchers and scholars on the topic, the text explores relevant topics including biodiversity in different habitats and regions, taxonomic groups, and perspectives. Volume Two offers coverage of insect biodiversity in regional settings such as the Arctic and Asia and in particular habitats including crops, caves, and islands. The authors also include information on historical, cultural, technical, and climatic perspectives of insect biodiversity. This book explores the wide variety of insect species and their evolutionary relationships. Case studies offer assessments on how insect biodiversity can help meet the needs of a rapidly expanding human population and examine the consequences that an increased loss of insect species will have on the world. This important text offers the most up-to-date information on the important topic of insect biodiversity. Explores vital topics such as the impact on insect biodiversity through habitat loss and degradation and climate change. With its companion Volume I, presents current information on the biodiversity of all insect orders. Contains reviews of insect biodiversity in culture and art in the fossil record and in agricultural systems. Includes scientific approaches and methods for the study of insect biodiversity. The book offers scientists, academics, professionals, and students a guide for a better understanding of the biology and ecology of insects, highlighting the need to sustainably manage ecosystems in an ever-changing global environment.

North American Terrestrial Vegetation Michael G. Barbour, William Dwight Billings, 2000. This second edition provides extensively expanded coverage of North American vegetation from arctic tundra to tropical forests.
