## **High Field Science:**

**Opportunities in High Magnetic Field Science** National Research Council, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Solid State Sciences Committee, Committee on Opportunities in High Magnetic Field Science, 2005-08-26 High field magnets those that operate at the limits of the mechanical and or electromagnetic properties of their structural materials are used as research tools in a variety of scientific disciplines The study of high magnetic fields themselves is also important in many areas such as astrophysics Because of their importance in scientific research and the possibility of new breakthroughs the National Science Foundation asked the National Research Council to assess the current state of and future prospects for high field science and technology in the United States This report presents the results of that assessment It focuses on scientific and technological challenges and opportunities and not on specific program activities The report provides findings and recommendations about important research directions the relative strength of U S efforts compared to other countries and ways in which the program can operate more effectively

**High Magnetic Field Science and Its Application in the United States** National Research Council, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Committee to Assess the Current Status and Future Direction of High Magnetic Field Science in the United States, 2013-12-25 The Committee to Assess the Current Status and Future Direction of High Magnetic Field Science in the United States was convened by the National Research Council in response to a request by the National Science Foundation This report answers three questions 1 What is the current state of high field magnet science engineering and technology in the United States and are there any conspicuous needs to be addressed 2 What are the current science drivers and which scientific opportunities and challenges can be anticipated over the next ten years 3 What are the principal existing and planned high magnetic field facilities outside of the United States what roles have U S high field magnet development efforts played in developing those facilities and what potentials exist for further international collaboration in this area A magnetic field is produced by an electrical current in a metal coil This current exerts an expansive force on the coil and a magnetic field is high if it challenges the strength and current carrying capacity of the materials that create the field Although lower magnetic fields can be achieved using commercially available magnets research in the highest achievable fields has been and will continue to be most often performed in large research centers that possess the materials and systems know how for forefront research Only a few high field centers exist around the world in the United States the principal center is the National High Magnetic Field Laboratory NHMFL High Magnetic Field Science and Its Application in the United States considers continued support for a centralized high field facility such as NHMFL to be the highest priority This report contains a recommendation for the funding and siting of several new high field nuclear magnetic resonance magnets at user facilities in different regions of the United States Continued advancement in high magnetic field science requires substantial investments in magnets with enhanced capabilities High Magnetic Field

Science and Its Application in the United States contains recommendations for the further development of all superconducting hybrid and higher field pulsed magnets that meet ambitious but achievable goals High-Field Science Toshiki Tajima, Kunioki Mima, Hector Baldis, 2001-03-31 High Field Science is a proceedings volume from a meeting at Lawrence Livermore Laboratory and contains papers from the top experts in the fields of ultraintense laser technology laser fusion energy high energy laser electron acceleration bright X ray sources by lasers laboratory laser astrophysics and applications to relativity high density and high energy physics *Megagauss Magnetic Field Generation, Its Application to Science and Ultra-high Pulsed-power Technology* Hans J. Schneider-Muntau, 2004 The generation of megagauss fields for science and technology is an exciting area at the extremes of parameter space involving the application and controlled handling of extremely high power and energy densities in small volumes and on short time scales New physical phenomena technological challenges and the selection and development of materials together create a unique potential and synergy resulting in fascinating discoveries and achievements This book is a collection of the contributions of an international conference which assembled the leading scientists and engineers worldwide working on the generation and use of the strongest magnetic fields possible Other research activities include generators that employ explosives to create ultra high pulsed power for different applications such as megavolt or radiation sources Additional topics are the generation of plasmas and magnetized plasmas for fusion imploding liners rail guns etc **High Magnetic Fields: Science And Technology (In 3 Volumes) - Vol. 2** Fritz Herlach, Noboru Miura, 2003-10-06 This three volume book provides a comprehensive review of experiments in very strong magnetic fields that can only be generated with very special magnets The first volume is entirely devoted to the technology of laboratory magnets permanent superconducting high power water cooled and hybrid pulsed magnets both nondestructive and destructive megagauss fields Volumes 2 and 3 contain reviews of the different areas of research where strong magnetic fields are an essential research tool These volumes deal primarily with solid state physics other research areas covered are biological systems chemistry atomic and molecular physics nuclear resonance plasma physics and astrophysics including QED **Progress in Ultrafast Intense Laser Science XVI** Kaoru Yamanouchi, Katsumi Midorikawa, Luis Roso, 2021-07-30 This book covers a broad range of topics from the interdisciplinary research field of ultrafast intense laser science focusing on atoms and molecules interacting with intense laser fields laser induced filamentation high order harmonics generation and high power lasers and their applications This sixteenth volume features contributions from world renowned researchers introducing the latest reports on probing molecular chirality with intense laser fields and the most recent developments in the Shanghai Superintense Ultrafast Laser Facility project The PUILS series delivers up to date reviews of progress in this emerging interdisciplinary research field spanning atomic and molecular physics molecular science and optical science which has been stimulated by the recent developments in ultrafast laser technologies Each volume compiles peer reviewed articles authored by researchers at the forefront of each of their own

subfields of ultrafast intense laser science Every chapter opens with an overview of the topics to be discussed so that researchers unfamiliar to the subfield especially graduate students can grasp the importance and attractions of the research topic at hand these are followed by reports of cutting edge discoveries

**Progress in Ultrafast Intense Laser Science I**  
 See Leang Chin,Pierre Agostini,Gaetano Ferrante,2006-10-03 This is the first of a series of books on Ultrafast Intense Laser Science a newly emerging interdisciplinary research field that spans atomic and molecular physics molecular science and optical science It covers intense VUV laser cluster interaction resonance and chaos assisted tunneling and the effects of the carrier envelope phase on high order harmonic generation

*Reviews Of Accelerator Science And Technology - Volume 10: The Future Of Accelerators* Weiren Chou,Alexander Wu Chao,2019-09-09 Volume 10 in the series of the annual journal Reviews of Accelerator Science and Technology RAST will be its final volume Its theme is The Future of Accelerators This volume together with previous 9 volumes gives readers a complete picture as well as detailed technical information about the accelerator field and its many driving and fascinating aspects This volume has 17 articles The first 15 articles have a different approach from the previous volumes They emphasize the more personal views perspectives and advice from the frontier researchers rather than provide a review or survey of a specific subfield This emphasis is more aligned with the theme of the current volume The other two articles are dedicated respectively to Leon Lederman and Burton Richter two prominent leaders of our community who left us last year

Frontiers of Materials Research National Academies of Sciences, Engineering, and Medicine,Division on Engineering and Physical Sciences,Board on Physics and Astronomy,National Materials and Manufacturing Board,Committee on Frontiers of Materials Research: A Decadal Survey,2019-08-12 Modern materials science builds on knowledge from physics chemistry biology mathematics computer and data science and engineering sciences to enable us to understand control and expand the material world Although it is anchored in inquiry based fundamental science materials research is strongly focused on discovering and producing reliable and economically viable materials from super alloys to polymer composites that are used in a vast array of products essential to today s societies and economies Frontiers of Materials Research A Decadal Survey is aimed at documenting the status and promising future directions of materials research in the United States in the context of similar efforts worldwide This third decadal survey in materials research reviews the progress and achievements in materials research and changes in the materials research landscape over the last decade research opportunities for investment for the period 2020 2030 impacts that materials research has had and is expected to have on emerging technologies national needs and science and challenges

*Final Report of the Committee on a Strategic Plan for U.S. Burning Plasma Research* National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Board on Physics and Astronomy, Committee on a Strategic Plan for U.S. Burning Plasma Research, 2019-07-01 Fusion offers the prospect of virtually unlimited energy The United States and many nations around the world have made enormous progress toward achieving fusion energy With ITER scheduled to go online within a decade and demonstrate controlled fusion ten years later now is the right time for the United States to develop plans to benefit from its investment in burning plasma research and take steps to develop fusion electricity for the nation's future energy needs At the request of the Department of Energy the National Academies of Sciences Engineering and Medicine organized a committee to develop a strategic plan for U S fusion research The final report's two

main recommendations are 1 The United States should remain an ITER partner as the most cost effective way to gain experience with a burning plasma at the scale of a power plant 2 The United States should start a national program of accompanying research and technology leading to the construction of a compact pilot plant that produces electricity from fusion at the lowest possible capital cost
