Sociomedical Perspectives on Patient Care Jeffrey Michael Clair, Richard M. Allman, 2014-10-17 Social change has placed new demands on the practice of medicine altering almost every aspect of patient care relationships Just as medicine was encouraged to embrace the biological sciences some 100 years ago recent directives indicate the importance of the social sciences in understanding biomedical practice Humanistic challenges call for changes in curative and technological imperatives In this book social scientists contribute to such challenges by using social evidence to indicate appropriate new goals for health care in a changing environment This book was designed to stimulate and challenge all those concerned with the human interactions that constitute medical practice To encompass a wide range of topics the authors include researchers practicing physicians from the specialties of family general geriatric pediatric and oncological medicine social and behavioral scientists and public health representatives Cutting across disciplinary boundaries they explore the ethical economic and social aspects of patient care These essays draw on past studies of the patient doctor relationship and generate new and important questions They address social behavior in patient care as a way to approach theoretical issues pertinent to the social and medical sciences The authors also use social variables to study patient care and suggest new areas of sociomedical inquiry and new approaches to medical practice education and research Its cross disciplinary approach and jargon free writing make this book an important and accessible tool for physician scholar and student

Techno-Fix Michael Huesemann, Joyce Huesemann, 2011-10-04 Nanotechnology Genetic engineering Miracle Drugs We are promised that new technological developments will magically save us from the dire consequences of the 300 year fossil fueled binge known as modern industrial civilization without demanding any fundamental changes in our behavior There is a pervasive belief that technological innovation will enable us to continue our current lifestyle indefinitely and will prevent social economic and environmental collapse Techno Fix shows that negative unintended consequences of technology are inherently predictable and unavoidable techno optimism is completely unjustified and modern technology in the presence of continued economic growth does not promote sustainability but hastens collapse The authors demonstrate that most technological solutions to social and technology created problems are ineffective They explore the reasons for the uncritical acceptance of new technologies show who really controls the direction of technological change and then advocate extensive reform This comprehensive expos is a powerful argument for why we can and should put the

genie back in the bottle An insightful and powerful critique it is required reading for anyone who is concerned about blind techno optimism and believes that the time has come to make science and technology more socially and environmentally responsible For more information please visit technofix.org
