High-energy Ion-atom Collisions Dénes Berényi,G. Hock,1988 These proceedings give fundamental information on the collision mechanisms of ions and atoms at relatively high energies and on their highly excited atomic states The information derived from such studies can often be applied in other fields such as material analysis dosimetry the study of the upper atmosphere and controlled fusion Phenomena involving the classical ion atom collision fields impact parameter dependences quasimolecular and electron correlation effects coherence phenomena the electron and photon spectroscopy of highly charged projectile and recoil ions the loss and capture of electrons molecular and solid state effects and different aspects of instrumentation are all discussed in this volume
