Self-talk in Sport Alexander T. Latinjak, Antonis Hatzigeorgiadis, 2020-03-10 Athletes are naturally exposed to

significant psychological challenges in sports but do not wait helplessly for the assistance of sports psychologists or trainers. Instead, they practise one form or another of self-regulation. Self talk in Sport explores one such self-regulatory strategy: self talk, the inner voice that accompanies every human being throughout their lives. Over time, research has revealed many secrets of self talk in sport, though many others remain unveiled. This book offers you the opportunity to discover the multiple identities of our self talk, how the inner coach serves as a rational counterpart to the irrational self, and what we need to do to develop our inner voice to reach its maximum self-regulatory potential. There is a general need for concrete interventions in sport, exercise, and performance psychology. In addition, the autonomous functioning of people is a central aim of psychological interventions that align with positive psychology and focus on people's strengths rather than weaknesses. In this volume, researchers and applied practitioners are shown how they can use self talk interventions to strengthen people's rational self-regulation in order to deal with a variety of situations that apply to both sport and other exercise and performance contexts. Since self talk is a tangible result of cognitive processes and inner experiences that researchers and applied practitioners can barely access, Self talk in Sport is a tool for sports psychologists to understand and interact with hidden parts within athletes that have a major impact on sport and exercise experiences and performance. A book demonstrating the diverse, both rational and irrational, identities of self talk, as well as specific interventions to change the inner dialogue of athletes, is a fundamental piece in the education of sport scientists.

Advances

and New Perspectives in Higher Education Quality Maria Esteban, Ana B. Bernardo, Ellian Tuero Herrero, Joana R. Casanova, Antonio Cervero, 2024-04-22 The changes that have occurred in today's society require Higher Education to be highly efficient in the academic and professional preparation of young people who enter university. For that reason, universities around the globe have been advocating in recent years for an improvement in the quality of teaching-learning processes. As an example, the World University Consortium 2023 currently presents among its most urgent and priority objectives the identification of the best evaluative practices of the educational processes that are carried out at the University as well as the recognition of the actions aimed at improving educational processes based on scientific evidence. In this way, it seeks to distinguish all those educational actions that are at the forefront, going from actions at the micro level such as individual teaching practices in the classroom such as the application of the flipped classroom or the use of augmented reality up to actions taken at the macro level such as those proposed in the Horizon Europe 2020 strategy.

Campbell, Iryna Babik, R. Eric Landrum, 2024-02-02 This guide will help instructors better understand the skills that underlie effective teamwork, offer strategies for structuring group projects and provide advice on imparting the knowledge and support that students need to develop highly functional advanced teamwork skills. Even instructors with a great deal of experience in structuring collaborative learning projects may recognize the gap that exists between their current efforts in providing students with teamwork experiences and effectively training students teamwork skills. By drawing on literature from the fields of organizational teamwork and teamwork pedagogy in higher education, the authors identify the processes associated with effective teamwork, relate these processes to teamwork in student teams and distill and organize strategies for developing students teamwork knowledge, skills and attitudes. Featuring evidence-informed tools, case studies and best practices, this highly practical text provides everything higher education instructors need to target and advance their students teamwork competencies while maximizing the learning benefits of peer collaboration. Learning Patterns in Higher Education David Gijbels, Vincent Donche, John T. E. Richardson, Jan D. Vermunt, 2013-09-11 *Learning Patterns in Higher Education* brings together a cutting-edge international team of contributors to critically review our current understanding of how students and adults learn, how differences and

changes in the way students learn can be measured in a valid and reliable way and how the quality of student learning may be enhanced There is substantial evidence that students in higher education have a characteristic way of learning sometimes called their learning orientation Biggs 1988 learning style Evans et al 2010 or learning pattern Vermunt and Vermetten 2004 However recent research in the field of student learning has resulted in multi faceted and sometimes contradictory results which may reflect conceptual differences and differences in measurement of student learning in each of the studies This book deals with the need for further clarification of how students learn in higher education in the 21st century and to what extent the measurements often used in learning pattern studies are still up to date or can be advanced with present methodological and statistical insights to capture the most important differences and changes in student learning The contributions in the book are organized in two parts a first conceptual and psychological part in which the dimensions of student learning in the 21st century are discussed and a second empirical part in which questions related to how students learning can be measured and how it develops are considered Areas covered include Cultural influences on learning patterns Predicting learning outcomes Student centred learning environments and self directed learning Mathematics learning This indispensable book covers multiple conceptual perspectives on how learning patterns can be described and effects and developments can be measured and will not only be helpful for learning researchers as such but also for educational researchers from the broad domain of educational psychology motivation psychology and instructional sciences who are interested in student motivation self regulated learning effectiveness of innovative learning environments as well as assessment and evaluation of student characteristics and learning process variables Library of Congress Subject Headings Library of Congress.
