Urban Design in the Arab World Robert Saliba, 2016-03-09. The Arab World is perceived to be a region rampant with constructed and ambiguous national identities, overwhelming wealth and poverty, religious diversity and recently the Arab uprisings, a bottom-up revolution shaking the foundations of pre-established long-standing hierarchies. It is also a region that has witnessed a remarkable level of transformation and development due to the accelerated pace imposed by post-war reconstruction, environmental degradation and the competition among cities for world visibility and tourism. Accordingly, the Arab World is a prime territory for questioning urban design, inviting as it does a multiplicity of opportunities for shaping, upgrading and rebuilding urban form and civic space while subjecting global paradigms to regional and local realities. Providing a critical overview of the state of contemporary urban design in the Arab World, this book conceptualizes the field under four major perspectives: urban design as discourse, as discipline, as research and as practice. It poses two questions: How can such a diversity of practice be positioned with regard to current international trends in urban design? Also, what constitutes the specificity of the Middle Eastern experience in light of the regional political and cultural settings? This book is about urban designers on the margins: how they narrate their cities, how they engage with their discipline and how they negotiate their distance from and with respect to global disciplinary trends. As such, the term margins implies three complementary connotations: on the global level, it invites speculation on the way contemporary urban design is being impacted by the new conceptualizations of center-periphery originating from the post-colonial discourse; on the regional level, it is a speculation on the specificity of urban design thinking and practice within a particular geographical and cultural context; here, the Arab World; and finally, on the local level, it is an *Urban Resilience, Livability, and Climate Adaptation*. Ilaria Pigliautile, Cristina Piselli, Hirushie Pramuditha Karunathilake, Claudia Fabiani, 2024-06-30. It provides interdisciplinary insights for fostering resilient, livable and sustainable cities, prioritizing well-being and quality of life for all residents. The book covers various topics and discusses innovative approaches for incorporating nature into urban planning. It also examines the relationships between diet diversity, food environments and transportation systems. Spatial

analysis of noise contour maps based on traffic speed is conducted along with an assessment of the impact of office environments on productivity The book explores the influence of streetscapes on anxiety envisions future cities from a youth perspective and identifies critical factors affecting the design and use of elevated urban spaces Daylighting performance in school expansions is evaluated and the concept of a livable city is examined Community adaptive capacity for climate resilient development is assessed through a case study analysis The livability of street vendors in different urban contexts is compared and alternative perspectives on restorative environments are presented The book investigates the impact of urban refugees on cities and reevaluates scientific theories for human well being oriented built environments It evaluates tourist satisfaction with urban railway systems and explores sport as a tool for healthy and sustainable cities      *Planning and Design of Tall Buildings: Structural design of tall concrete & masonry buildings* ,1972
