Finite and Locally Finite Groups B. Hartley, G.M. Seitz, A.V. Borovik, R.M. Bryant, 2012-12-06 This volume contains the proceedings of the NATO Advanced Study Institute on Finite and Locally Finite Groups held in Istanbul Turkey 14-27 August 1994 at which there were about 90 participants from some 16 different countries The ASI received generous financial support from the Scientific Affairs Division of NATO INTRODUCTION A locally finite group is a group in which every finite set of elements is contained in a finite subgroup The study of locally finite groups began with Schur's result that a periodic linear group is in fact locally finite The simple locally finite groups are of particular interest In view of the classification of the finite simple groups and advances in representation theory it is natural to pursue classification theorems for simple locally finite groups This was one of the central themes of the Istanbul conference and significant progress is reported herein The theory of simple locally finite groups intersects many areas of group theory and representation theory so this served as a focus for several articles in the volume Every simple locally finite group has what is known as a Kegel cover This is a collection of pairs G_i where $i \in I$ where I is an index set each group G_i is finite $i \in I$

working in group theory *Finite Geometries* Peter Dembowski, 2012-12-06 From the reviews Such a vast amount of information as this book contains can only be accomplished in 375 pages by a very economical style of writing it enables one to have a good look at the forest without being too detracted by the individual trees The author deserves unstinting praise for the skill energy and perseverance which he devoted to this work The finished product confirms what his many earlier contributions to the subject of finite geometry have already indicated namely that he is an undisputed leader in his field

Mathematical Reviews **Geometry and Combinatorics** J. J. Seidel, 2014-05-10 Geometry and Combinatorics Selected Works of J J Seidel brings together some of the works of J J Seidel in geometry and combinatorics Seidel s selected papers are divided into four areas graphs and designs lines with few angles matrices and forms and non Euclidean geometry A list of all of Seidel s publications is included Comprised of 29 chapters this book begins with a discussion on equilateral point sets in elliptic geometry followed by an analysis of strongly regular graphs of L2 type and of triangular type The reader is then introduced to strongly regular graphs with $\begin{pmatrix} 1 & 1 & 0 \end{pmatrix}$ adjacency matrix having eigenvalue 3 graphs related to exceptional root systems and equiangular lines Subsequent chapters deal with the regular two graph on 276 vertices the congruence order of the elliptic plane equi isoclinic subspaces of Euclidean spaces and Wielandt s visibility theorem This monograph will be of interest to students and practitioners in the field of mathematics
