

13.2: Reaction Kinematics

- Consider the reaction: $x + X \rightarrow y + Y$. For a target X at rest, conservation of energy is

$$M_x c^2 + K_x + M_X c^2 = M_y c^2 + K_y + M_Y c^2 + K_Y$$

- Rearranging this by separating mass from energy yields a quantity similar to the disintegration energy:

$$Q = M_x c^2 + M_X c^2 - (M_y c^2 + M_Y c^2) = K_y + K_Y - K_x$$

- The difference between the final and initial kinetic energies is the difference between the initial and final mass energies. This is called the **Q value**.

- The energy released when $Q > 0$ is from an exoergic (or *exothermic*) reaction. When $Q < 0$, kinetic energy is converted to mass energy in an endoergic (or *endothermic*) reaction. Collisions in this reaction are inelastic. Elastic collisions have $Q = 0$.
- Threshold energy for an endoergic reaction:

$$K_{th} = -Q \left(\frac{M_x + M_X}{M_X} \right)$$

Introduction to Nuclear Reactions C.A. Bertulani, P. Danielewicz, 2019-01-04 Until the publication of Introduction to Nuclear Reactions an introductory reference on nonrelativistic nuclear reactions had been unavailable Providing a concise overview of nuclear reactions this reference discusses the main formalisms ranging from basic laws to the final formulae used to calculate measurable quantities Well known in their fields the authors begin with a discussion of scattering theory followed by a study of its applications to specific nuclear reactions Early chapters give a framework of scattering theory that can be easily understood by the novice These chapters also serve as an introduction to the underlying physical ideas The largest section of the book comprises the physical models that have been developed to account for the various aspects of nuclear reaction phenomena The final chapters survey applications of the eikonal wavefunction to nuclear reactions as well as examine the important branch of nuclear transport equations By combining a thorough theoretical approach with applications to recent experimental data Introduction to Nuclear Reactions helps you understand the results of experimental measurements rather than describe how they are made A clear treatment of the topics and coherent organization make this information understandable to students and professionals with a solid foundation in physics as well as to those with a more general science and technology background **An Introduction to Experimental Nuclear Reactions** Chinmay

Basu, 2021-11-16 An Introduction to Experimental Nuclear Reactions is a book with a concise and simple approach to the subject of experimental nuclear physics The subject being very technical it is dealt with in a lucid way so that the reader can grasp the concept and later gain hands on experience while doing fieldwork In this book theoretical experimental and instrumentation aspects are covered with an emphasis on accelerator based techniques which form the basis for the subject

of experimental nuclear physics Other books on similar topics either concentrate on the physics aspects or are more focussed on the instrumentation and radiation detection techniques while accelerator related concepts are less explained One of the main standalone features of the book is its to the point approach so that the beginner is not lost in the never ending details This book discusses the following aspects Basic introduction to nuclear reactions Two and three body kinematics Accelerator based experimental techniques Basic aspects of the accelerator and accessories Vacuum physics Radiation detector physics and its associated electronics Theoretical modelling and errors This book is mainly intended for students who aspire to pursue a career in experimental nuclear physics research or work in a nuclear accelerator laboratory Chinmay Basu PhD is a researcher in the field of experimental nuclear physics and his present interests are in the field of low energy nuclear astrophysics He is a professor and head of an accelerator facility at the Saha Institute of Nuclear Physics Kolkata India

High Energy Spin Physics Karl-Heinz Althoff, Werner Meyer, 1991 The 9th International Symposium on High Energy Spin Physics held in Bonn 6 15 September 1990 attracted 280 participants from 16 countries This meeting covered not only fundamental experimental and theoretical spin phenomena but also technological developments in polarized beams and targets For the first time intermediate energy spin physics with electron machines was discussed extensively Highlights included the work on polarized high energy electron beams at LEP and TRISTAN and the failure of the standard model in connection with spin phenomena in particular the growth of the spin asymmetry in violent proton proton scattering Also the presentation of different models in connection with the still unsolved proton spin crisis and the proposals for four different

experiments to determine the spin structure functions caused lively and sometimes controversial discussions The Organizing Committee would like to thank all speakers for their excellent talks the conveners for the organization of the parallel sessions and the International Advisory Committee for their advice Four workshops preceded the symposium 160 participants among them many young physicists discussed mainly technological spin problems These papers are published in separate proceedings We gratefully acknowledge the enthusiastic help of the members of our institute in preparing and running the conference and the workshops especially Mrs D FaSbender Mrs E Wendorf Mrs J Wetzels and Dr U Idschok
