Tomorrow with Aeronautical and Space Technology United States. Congress. Senate. Committee on Aeronautical and Space Sciences,1973 Rocky Mountain Divide John B. Wright,2010-07-22 The opposing forces of conservation and development have shaped and will continue to shape the natural environment and scenic beauty of the American West Perhaps nowhere are their opposite effects more visible than in the neighboring states of Colorado and Utah so alike in their spectacular mountain environments yet so different in their approaches to land conservation This study explores why Colorado has over twenty five land trusts while Utah has only one John Wright traces the success of voluntary land conservation in Colorado to the state s history as a region of secular commerce As environmental consciousness has grown in Colorado people there have embraced the businesslike approach of land trusts as simply a new more responsible way of conducting the real estate business In Utah by contrast Wright finds that Mormon millennialism and the belief that growth equals success have created a public climate opposed to the formation of land trusts As Wright puts it environmentalism seems to thrive in the Centennial state within the spiritual vacuum which is filled by Mormonism in Utah These findings remind conservationists of the power of underlying cultural values that affect their efforts to preserve private lands

Space and Transport in the World-System Stephen G. Bunker,Paul S. Ciccantell,1998-02-28 Key metaphors in world system analysis are profoundly spatial but there have been few attempts to understand how space location and topography affect world system organization and process To fill this gap this book examines case studies of the restructuring of space and transport in core semiperipheral and peripheral economies It addresses such topics as the role of ocean transport in linking terrestrially based units of the capitalist world economy the role of land transport systems in the construction and restructuring of relationships between raw materials peripheries and core economies and the role of the airplane in transforming and representing changing spatial economic and social relations in the capitalist world economy World systems theory and many other perspectives on the world economy including international political economy and analysis of globalization typically pay only limited attention to issues of space location and the role of transportation in the world economy This book identifies key theoretical and empirical issues and provides the basis for formulating research strategies to address this gap in our understanding *The Black and White Rainbow* Carolyn Holmes,2020-10-13 Nation building imperatives compel citizens to focus on what makes them similar and what binds them together forgetting what makes them

different Democratic institution building on the other hand requires fostering opposition through conducting multiparty elections and encouraging debate. Leaders of democratic factions like parties or interest groups can consolidate their power by emphasizing difference. But when held in tension these two impulses toward remembering difference and forgetting it between focusing on unity and encouraging division are mutually constitutive of sustainable democracy. Based on ethnographic and interview based fieldwork conducted in 2012-13, *The Black and White Rainbow: Reconciliation, Opposition and Nation Building in Democratic South Africa* explores various themes of nation and democracy building including the emotional and banal content of symbols of the post apartheid state, the ways that gender and race condition nascent nationalism, the public performance of nationalism and other group based identities, integration and sharing of space, language diversity and the role of democratic functioning including party politics and modes of opposition. Each of these thematic chapters aims to explicate a feature of the multifaceted nature of identity building and link the South African case to broader literatures on both nationalism and democracy. Newton, 2015-10-26 This book provides an outstanding single volume resource on the topic of solar energy for young adults and general audiences. While how much longer the world's supply of fossil fuels will last is debatable, it is a fact that the fossil fuels that we depend on so heavily today are non renewable resources that will inevitably be exhausted, making the need to shift to alternative sources of energy such as solar extremely important. *Solar Energy: A Reference Handbook* presents encyclopedic coverage of the social, political, economic and environmental issues associated with the development and use of solar energy in the United States and around the world. This book provides an in depth description of the ways solar power has been used for at least 2,000 years. It outlines how humankind has utilized various forms of energy from the sun by way of photovoltaic cells, concentrating or focusing solar power, active and passive solar heating and other mechanisms, and provides perspectives on today's solar energy issues from a variety of subject experts. Readers will better understand not only the advantages and disadvantages of solar power but also the critical nature of energy production to sustaining life on earth, thereby underscoring the importance of developing solar power and other alternative sources of energy to meet the world's energy needs in coming decades. The book also includes profiles of key individuals and organizations related to the field of solar energy, a chronology of important events in the history of solar energy, and a glossary that defines the key terms used in discussing the topic of solar energy.

Considering Space Dominik Bartmanski, Henning Füller, Johanna Hoerning, Gunter Weidenhaus, 2023-09-15 *Considering Space* demonstrates what has changed in the perception of space within the social sciences and how useful indeed indispensable this category is today. Monthly Catalog of United States Government Publications ,1995 [Pictures in Place](#) Kenneth Lim,2006-11 This study describes data that was gathered in 2004 from fieldwork conducted by students from four schools in Singapore around tasks of wayfinding and debate The fieldwork tasks were designed specifically to permit participants to exercise their powers of observation as opposed to more traditional tasks of collection of empirical data To this end the study was constructed such that students were given opportunities to collaboratively explore and navigate unfamiliar environments using text and picture messaging as well as to engage in debate and use multimedia evidence recorded in the field to defend their positions both to peers in the field and in the classroom regarding various issues of concern to these environments with specific links being made to their studies in geography The data was used to shed light on those elements in urban and suburban environments which adolescents in Singapore find geographically meaningful as well as to determine the extent to which such interventions might augment students spatial intelligence with a view to informing a more effective geography education programme in schools The nature of the collaborative discourse which emerged as participants engaged in the intervention was also investigated using a proprietary taxonomy of discourse types This thesis is grounded in neo Vygotskyian socio cultural activity theory Primary findings include the suggestion that key elements in adolescents local environments used to orientate and to convey spatial information are axial lines and buildings The data also reveals differences between the genders in their preference for text over pictures in conveying such information Adolescents who are more successful in participating in and applying spatial discourse also tend to exhibit certain habits of mind such as perseverance as well as to scaffold their exchanges more Finally the study suggests that certain fieldwork interventions can indeed augment spatial intelligence and mapping skills
