## **Land Resources On The Edge Of The Malthusian Precipice:**

*Land Resources* D. J. Greenland, David J. Green, P. J. Gregory, Peter Hague Nye, 1998 From the presentations and discussions a set of conclusions is drawn concerning our ability to feed the world population and the steps which must be taken to ensure that we achieve this aim This book is essential reading for practitioners and students of agronomy forestry soil science and ecology concerned with natural resource management and presents information which will also be of value to economists policy makers and environmentalists with an interest in global issues *Land Resource Potential and*

*Constraints at Regional and Country Levels*, 2000-01-01 This publication provides an overview of the land resources characteristics their status and limitations at a global regional and national level The statistics provided here widen and complement those given by FAO and the World Resources Institute They include data on soil climate and terrain characteristics and constraints human induced land degradation status and desertification risk A comparative analysis of national land resource potential is included A link has been made between land resource limitations and the population affected

**Response to Land Degradation** E M Bridges, 2019-04-24 This work is intended for advanced readers interested in methods of sustainable land management the prevention and control of land degradation It offers a coherent view of the situation concerning land degradation and the human response to the problem It is generally recognized that technological solutions alone cannot solve the problems of land degradation This book discusses the role of land use and land management policies programmes institutional innovations and economic incentives for the control and prevention of land degradation Special attention is given to legal issues at the international level and in individual countries Soil Fertility

Management in Support of Food Security in Sub-Saharan Africa D. J. Greenland, H. Nabhan, Food and Agriculture Organization of the United Nations, 2001-01-01 This publication reviews issues related to land degradation with focus on problems of soil fertility management in sub Saharan Africa It highlights some successful experiences in the region constraints and possible solutions specific to the major agro ecological zones and the importance of the holistic and participatory approaches for soil productivity improvement The need for action and collaborative efforts of all stakeholders within the framework of ongoing initiatives are emphasized It is hoped that this document will contribute to increase awareness of senior specialists and policy makers about the problems and alternative solutions towards enhanced and sustained soil productivity **Southern African Landscapes and Environmental Change** Peter J. Holmes, John

Boardman, 2018-07-04 This volume provides a textbook and reference work on the physical and biotic landscapes of Southern Africa It examines the links between these environments and the ways in which they have been and will likely be subject to change It covers the geomorphology soils vegetation and land use across a range of landscapes including mountains coasts savannah drylands and wetlands and identifies the impacts of current and potential climate change and other factors on these environments The geographical focus is on the region defined by Namibia South Africa Botswana Mozambique

Zimbabwe Lesotho and Swaziland Illustrated throughout in full colour the book will serve as a reference volume for researchers and environmental professionals internationally as well as a textbook for senior undergraduate and graduate level students of geography ecology and environmental studies in Southern Africa People and their Planet Barbara Sundberg Baudot, William R. Moomaw, 2016-07-27 This book brings together research on the relations between people and the planet s living and non living resources Its three main foci include the methodological approaches to the study of relationships between people and land use patterns of consumption population trends and the availability of food and water resources an examination of evidence of disequilibria in increasing conflicts migrations and over crowding and a search for balance between people and the other elements of the biosphere through understanding and overcoming destructive forces

**Methods for Assessment of Soil Degradation** Rattan Lal, Winfried E. H. Blum, C. Valentin, B.A. Stewart, 2020-11-26 Soil degradation has serious global impacts on agronomic economic and sociopolitical conditions however statistics regarding the degree of these impacts has been largely unreliable This book aims to standardize the methodology for obtaining reliable and objective data on soil degradation It will also identify and develop criteria for assessing the severity of soil degradation providing a realistic scenario of the problem **Encyclopedia of Environmental Health** , 2019-08-22 Encyclopedia of Environmental Health Second Edition Six Volume Set presents the newest release in this fundamental reference that updates and broadens the umbrella of environmental health especially social and environmental health for its readers There is ongoing revolution in governance policies and intervention strategies aimed at evolving changes in health disparities disease burden trans boundary transport and health hazards This new edition reflects these realities mapping new directions in the field that include how to minimize threats and develop new scientific paradigms that address emerging local national and global environmental concerns Represents a one stop resource for scientifically reliable information on environmental health Fills a critical gap with information on one of the most rapidly growing scientific fields of our time Provides comparative approaches to environmental health practice and research in different countries and regions of the world Covers issues behind specific questions and describes the best available scientific methods for environmental risk assessment *Advances in Agronomy* Donald L. Sparks, 2012-09-07 *Advances in Agronomy* continues to be recognized as a leading reference and a first rate source for the latest research in agronomy As always the subjects covered are varied and exemplary of the myriad of subject matter dealt with by this long running serial Maintains the highest impact factor among serial publications in agriculture Presents timely reviews on important agronomy issues Enjoys a long standing reputation for excellence in the field Soil Fertility Decline in the Tropics Alfred E. Hartemink, 2003 Wide coverage of soils and perennial cropping systems in the tropics Synthesis of decades of research Challenges assumptions on the benefits of plantations for soil fertility It is generally assumed that soil fertility decline is widespread in the tropics and that this is largely associated with annual cropping and subsistence farming In contrast perennial plant cover as in plantation agriculture provides better protection for

the soil This book reviews these concepts focusing on soil chemical changes under different land use systems in the tropics These include perennial crops annual crops and forest plantations Two case studies on sisal plantations in Tanzania and sugar cane in Papua New Guinea are presented for detailed analysis The author demonstrates that soil fertility decline is also a problem on plantations

**Soil Security for Ecosystem Management** Selim Kapur, Sabit Erşahin, 2013-08-27 The term Soil Security is used in the context of maintaining the quality and quantity of soil needed in order to ensure continuous supplies of food and fresh water for our society Topics in this unique book on the management of soil sustainability in the Mediterranean region include soil information land degradation land desertification pedoenvironments and the carbon cycle and sequestration One main focus of the book is the description of new approaches that have been adapted with regards to interdisciplinary soil ecosystem management to combat and mitigate desertification The contributing authors are renowned experts in their fields which cover the subjects on traditional as well as innovative land use and management

**Consilience** E. O. Wilson, 2014-11-26 NATIONAL BESTSELLER A dazzling journey across the sciences and humanities in search of deep laws to unite them The Wall Street Journal One of our greatest scientists and the winner of two Pulitzer Prizes for *On Human Nature* and *The Ants* gives us a work of visionary importance that may be the crowning achievement of his career In *Consilience* a word that originally meant jumping together Edward O Wilson renews the Enlightenment's search for a unified theory of knowledge in disciplines that range from physics to biology the social sciences and the humanities Using the natural sciences as his model Wilson forges dramatic links between fields He explores the chemistry of the mind and the genetic bases of culture He postulates the biological principles underlying works of art from cave drawings to *Lolita* Presenting the latest findings in prose of wonderful clarity and oratorical eloquence and synthesizing it into a dazzling whole *Consilience* is science in the path clearing traditions of Newton Einstein and Richard Feynman

**The Global Environmental Benefits of Land Degradation Control on Agricultural Land** Stefano Pagiola, 1999-01-01 This book focuses on the global effects of land degradation but emphasizes other important levels of land degradation at the field level it may result in reduced productivity at the national level it may cause flooding and sedimentation and at the global level it can contribute to climate changes damaging bio diversity and international waters The effects on climate changes are explored and the report questions the extent to which land degradation on agricultural land affects climate change Does it increase emissions of greenhouse gases Does it affect land's capacity to serve as a carbon sink Can appropriate management enhance both land's productivity and its capacity to store carbon The carbon cycle in soils is analyzed indicating land degradation is likely to reduce the ability of soils to serve as carbon sink and release stored carbon into the atmosphere and bio diversity effects are likely to be adverse Global benefits of land degradation control include afforestation to allow increased carbon sequestration and provide adequate bio diversity habitats and community based wildlife management can provide alternatives to some marginal areas Although integrating global dimensions into land degradation control projects

may reverse the field level or national problems it is causing difficulties and constraints will likely contribute to the failure of these projects

**Soil-Subsurface Change** Bruno Yaron, Ishai Dror, Brian Berkowitz, 2012-02-18 This book combines soil science earth science and environmental geochemistry providing comprehensive background information for specialists interested in chemical induced changes in the soil subsurface system Readers are introduced to the chemistry of contaminants that often disturb the natural soil subsurface equilibrium as a result of human activity While the soil subsurface system has in many cases been affected by human impact the effects of chemical contaminants on the actual matrix and properties have been largely neglected The major focus of the book is on changes to the soil subsurface matrix and properties caused by chemical pollution By integrating results available in the literature we observe that chemical pollutants may lead to the irreversible formation of a new soil subsurface regime characterized by a matrix and properties different than those of the natural regime In contrast to the geological time scales dictating natural changes to the matrix and properties of the soil subsurface system the time scale associated with chemical pollutant induced changes is far shorter and extends over a human lifetime scale The numerous examples presented in the book confirm that chemical contamination should be considered as an additional factor in the formation of a contemporary soil subsurface regime that is different than that of the pristine system

**Managing Organic Matter in Tropical Soils: Scope and Limitations** Christopher

Martius, Holm Tiessen, Paul L.G. Vlek, 2013-11-11 Soil organic matter is a reservoir for plant nutrients provides water holding capacity stabilizes soil structure against compaction and erosion and thus determines soil productivity All agriculture to some degree depends on soil organic matter It has long been known that soil organic matter declines when land is taken into cultivation and that the productivity of new agricultural land is governed by fertility contributions from decomposing natural organic matter The expansion of agriculture to ever new and more fragile lands particularly in tropical and developing regions causes environmental degradation with local effects on soil quality regional effects on landscape integrity and water quality and global effects on carbon cycles and the atmosphere This book summarizes current knowledge of the properties and dynamics of soil organic matter in the tropics its role in determining soil quality its stability and turnover and the options for management in the context of tropical land use systems for a readership of resource scientists economists and advanced students Maintenance of organic matter is critical for preventing land degradation Case studies and practical applications are therefore an important part of the book as are the exploration of future directions in research and management

***Contaminant Geochemistry*** Brian Berkowitz, Ishai Dror, Bruno Yaron, 2014-04-22 In this updated and expanded second edition new literature has been added on contaminant fate in the soil subsurface environment In particular more data on the behavior of inorganic contaminants and on engineered nanomaterials were included the latter comprising a group of emerging contaminants that may reach the soil and subsurface zones New chapters are devoted to a new perspective of contaminant geochemistry namely irreversible changes in pristine land and subsurface systems following chemical

contamination Two chapters were added on this topic focusing attention on the impact of chemical contaminants on the matrix and properties of both liquid and solid phases of soil and subsurface domains Contaminant impacts on irreversible changes occurring in groundwater are discussed and their irreversible changes on the porous medium solid phase are surveyed In contrast to the geological time scale controlling natural changes of porous media liquid and solid phases the time scale associated with chemical pollutant induced changes is far shorter and extends over a human lifetime scale
